Lancaster Farming, Saturday, March 28, 1981

\$7.50 Per Year

Jay Irwin named Extension director

BY DICK ANGLESTEIN

LANCASTER — Jay W. Irwin, whose educational efforts and guidance as agricultural extension agent have been in the forefront of the growth of a county poultry industry that has more than quadrupled in the past decade and a half, has been named Lancaster County Extension Director.

Irwin, who came to Lancaster County in 1967, succeeds Max M. Smith, who has retired after 44 years of service.

When Irwin began his extension duties in the county in 1967, a 30,000-bird house was considered a large poultry facility. The value of poultry production in Lancaster County was then valued at about \$30 million.

Today, new poultry houses have capacities of some 80,000 birds. Already by 1979, poultry production had grown to a \$125 million business in Lancaster County.

In addition to his efforts on behalf of the poultry industry, Irwin has been very active in farm management, conducting educational sessions and advising farm families in various

Jay W. Irwin

agricultural fiscal areas, such as estate planning.

In 4-H, he has been engaged in youth work, including the horse and tractor clubs and capons.

Irwin has received a number of awards for his outstanding educational programs for both youth and adult farm groups.

In 1970, he received the Career

Friends remember Max Smith

BY SALLY BAIR
Staff Correspondent

LANCASTER — "Max Smith was a man of dedication, a man purpose and a man of insight."

These words of Marian Deppen, capital region administrator of the Extension Service, express the feelings of many as they talked about Max's retirement after 44 years of dedicated service to Lancaster's agricultural community.

Although himself never a member of 4-H as a youth, it is probably for his work with Lancaster County's 4-H members that Smith will be most fondly remembered.

All those interviewed expressed admiration for Max and his outstanding success with young people, indeed, his ability to work successfully with all people was recognized as a key factor in his productive career.

Herman Purdy, retired Penn State extension livestock specialist, put it succinctly, "I travel all over the country judging and consulting and Max is the most outstanding county agent I have met. I've judged in 44 states and he is the most outstanding — the top one."

Purdy credits Max with getting young people interested in

State to bleed hogs in extensive PRV survey

BY SHEILA MILLER

TERRE HILL — Bureau of Animal Industries officials of the Pennsylvania Department of Agriculture outlined a survey involving an estimated 200 hog farms in Lancaster County during a special meeting on Thursday afternoon at the Union Grove School.

The survey, which is planned for April and will encompass 50 square miles, will give state veterinarians a better handle on the extent of the pseudorabies problem and the plausibility of an eradication program.

It was a poor turnout of farmers though, with only a half dozen attending the session.

"We needed a rainy day instead of a bright sunny day," said Dr. John Cable, head of the Swine Division of BAI. "Everyone is out working in the fields."

Those farmers who were in attendance listened as Dr. Max Van Buskirk, BAI chief veterinarian, discussed the details of the survey.

"At the present time, there have been 30 herds of swine infected with pseudorabies in the state — mostly in Lancaster County. There are still 29 herds under quarantine," he said. "We would like to eradicate this disease, but first we need to know the scope of the problem."

The area earmarked for the concentrated survey surrounds the nucleus of the present herd infections, from the northern limits of the Pa. turnpike, east to Bowmansville and Goodville, south to New Holland and Leola, and west to Ephrata. Three two-man teams of BAI technicians will visit every hog farm in the designated area and will take

random blood samples from about 20 to 25 hogs, depending on herd size.

"By knowing how many herds are infected with pseudorabies, we will be able to decide if the state and the industry can afford to eradicate the disease," explained

Van Buskirk. "If the cost is prohibitive and there's too much of an impact on the industry, we may have to live with the problem."

"We're not concerned in knowing which hog in the herd has

(Turn to Page A38)

Farm safety honors were presented to William A. Reagan, left; Shirley Garner; Bob and Ken Messick, Messick Farm Equipment, Inc. All were honored for helping make Pennsylvania farms safer places to work.

Safety programs gather laurels

BY CURT HARLER

STATE COLLEGE — The Pennsylvania Agricultural Safety Council Thursday honored several members of the area farm community for outstanding contributions to farm safety.

Shirley Garner, Rt. Mount Joy, was presented the special in-

dividual award for her leadership in promoting farm safety.

Ken and Bob Messick, Elizabethtown machinery dealers, were given the industry award in recognition of their opening their shop to emergency rescue crews so they could practice farm rescue techniques.

Franklin County Extension Agent William A. Reagan took first place in the professional educator category, an award coming after he invested 25 years of work with youth.

The awards were presented at the Fourth Annual Meeting of the Ag Safety Council, held at the Nittany Lion Inn.

Mrs. Garner has worked for health and safety in Lancaster County for the past several years. She is chairman of the Health and Safety Committee of the Lancaster Farmers' Association Women's Committee.

She has worked over the past two years with fire and emergency crews dealing with farm equipment rescues.

She expanded her program from four training programs in 1979 to six in 1980. A total of 228 men and women from 55 County fire companies participated in this year's programs.

The Messicks, who sell IH and New Holland Equipment, have conducted safety programs for over 300 rescuers in Lancaster County. Included in those numbers are programs sponsored by Mrs. Garner.

Farm bill held, dairy cuts move

WASHINGTON, D.C. — U.S. Agriculture Secretary John Block this week postponed bringing the 1981 Farm Bill before Congress, preferring to wait until the fate of S-509, the dairy support bill, could be resolved.

The Farm Bill package was to be presented to the House Agriculture Committee on Tuesday and the Senate Committee on Wednesday.

The Senate overwhelmingly passed S-509, a measure which eliminates the April 1 price support boost.

But even when the Farm Bill program is presented, probably next week, it will be far from final. The Senate and House of Representatives, with plenty of help from the farm lobby, will have their chances to change and amend the measure.

Although the Bill will contain

what the Reagan Administration wants in the way of a farm program, the final picture could be quite different from what Block takes to Capitol Hill.

Many observers predict a drawn-out fight, perhaps even a Presidential veto of congressional changes, before the bill becomes law.

Dairy and grain programs are of most interest to local farmers. And those programs will be among those most radically changed.

Sizable chunks will be carved out of the Farmers Home Administration budget, perhaps over 50 percent, if Reagan's men get their way. That will mean tough sledding for farmers getting started.

Higher interest rates also are likely on FmHA loans.

From chick to cage, we formulate feeds and feeding programs with your profit in mind.

At Pennfield Feeds, our basic goal is to help our customers make more money. We believe we can accomplish this for you, too.

Unlike many other feed companies, we develop custom feeding programs for each individual operation.

It all starts with a Pennfield man reviewing your operation with you. Your goals. Your records. The health and overall condition of your birds. Whether you grow chicks or buy pullets. The type of equipment you use. The production potential of your flock. Your management

practices. And other factors that have an effect on your profit potential.

With the aid of computers, we then design a feeding program specifically tailored to your birds' needs — a program that can improve your profits by reducing expenses, increasing production, or both.

And we're a local company. We buy our feed grains locally. Shipping savings are passed on to customers. Our feeding programs are developed through test work and field trials based on local conditions.

These and other Pennfield advantages are helping hundreds of customers increase their profits. We can do the same for you. Phone or write us today.

steers ended the week 50 to 1.00, instances 1.50 higher than Wednesday of last week. Slaughter heifers ended the week steady to 25 higher. Cows ended the week 1.00 to instances 1.50 higher.

SLAUGHTER STEERS: Mixed High Choice and Prime 3, few 4, 1100-1300# 60.50-61.25, load 61.50 Monday; 61.00-62.00 Wednesday; YG 3-4, few 5, 1150-1350# 59.00-60.00 Monday; 59.00-60.50; 4-5 1300-1575# 57.00-58.00. Choice 2-4 1050-1300# 60.00-61.00, load 61.25, load 61.50 Monday; 60.50-61.50 Wednesday. Mixed Good and Choice 2-3 1000-1250# 59.00-60.00 Monday; 59.00-60.50 Wednesday.

SLAUGHTER HEIFERS: Mixed Choice and Prime 3-4 950-1150# 60.00-60.25, load 60.50 Monday; 59.50-60.00, 2 loads 60.25 Wednesday Choice 2-4 875-1100# 59.00-60.00 Monday; 58.50-59.50 Wednesday Mixed Good and Choice 2-3 800-1000# 57.50-58.50 Monday; 57.00-58.50 Wednesday.

COWS. Cutter & Utility, few Commercial 1-3 40.00-44.00, few 44.50 Monday; 40.00-45.00 Wednesday.

The Agway DNI feeding program gives these hens the nutrients they need. And without wasting dollars.

The Agway Daily Nutrient Intake (DNI) feeding program gives your birds the nutrients they need for maximum production at the lowest possible cost. The simple and efficient DNI system prevents overfeeding of expensive protein while meeting your hens' daily requirements for amino acids and other nutrients.

MAINTAINS A CONSTANT NUTRIENT LEVEL AS DAILY INTAKE CHANGES.

The idea behind the DNI program is simple: as feed intake varies, change feeds to avoid paying for more nutrition than your birds require.

Suppose, for example, your flock is eating 100 grams of feed per bird daily (22 lbs./100 birds) Under the DNI program, your feed would be

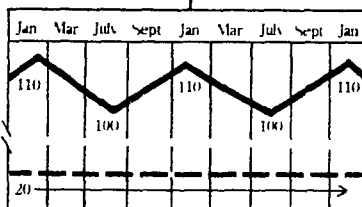

Today there's no need to put more nutrients in your bins than your hens need

Agway High Layer 1000.

During cold weather, when the birds moved up to 110 grams of feed daily, you'd switch to High Layer 1100+ to maintain daily nutrient intake at the required level. Paying for more protein than necessary can significantly affect the profitability of your business

By monitoring your flock's intake, you'll know when to change feeds (such as Agway High Layer 900 when birds are eating just 90 grams of feed/day, or High Layer 1100+ when birds are consuming 110 grams of feed/day)

Even though your birds' feed intake varies seasonally on the Agway DNI program nutrient intake remains constant provided you change feeds based on intake

YOUR AGWAY POULTRY SPECIALIST CAN HELP SET UP A DNI PROGRAM FOR YOUR OPERATION.

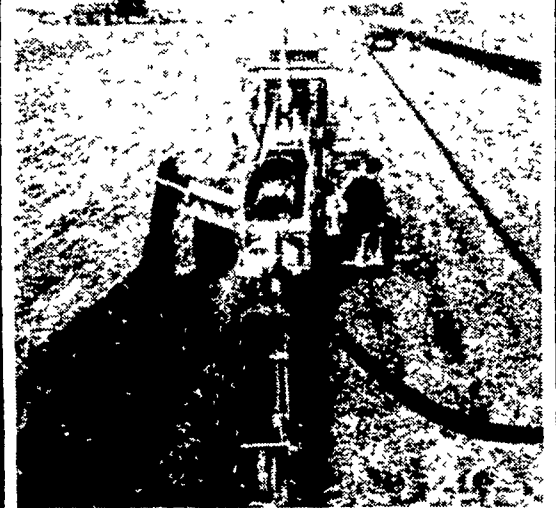

Agway Poultry Enterprise specialists are available to help you set up a DNI program for your operation. You'll find that DNI is simple. All you do is watch your birds' feed intake and adjust feeds accordingly

So contact your local Agway today for more details on the DNI program — the system that makes sure your birds get the nutrients they need... without wasting dollars

Lancaster Farming says...

Change kept Max live and lively

There'll be another change this weekend in Lancaster County agriculture. Max Smith is retiring.

Change is no stranger to Pennsylvania's Senior County Agent. Change has been Max's constant companion since he began extension work in 1937 in Lancaster County.

Max Smith has seen change from three perspectives in the 44 years he served the farmers of Lancaster County. He has been an agent of change; he has watched changes occur around him; he has reacted to changes in his business.

Sunday at the Lancaster Bible College several hundred of his friends will gather for a testimonial to honor Max Smith and the work he has done.

The young Smith was graduated from Hickory Vocational High and from Penn State. He served a stint with Production Credit, but shortly thereafter moved east to Lancaster County, Washington County's loss

was Lancaster's gain.

One of his first jobs in the County was to help members of the Red Rose 4-H Baby beef club. In over four decades, he never quit working with the County's youth. In that time he trained the exhibitors of 16 Farm Show grand champs and 15 reserves.

On the way, Max started annual tours for both beef and swine producers. He personally helped survey and flag many county farm ponds, drainage ditches and diversion terraces.

He introduced Dairy Day in 1950, organized the County Swine Association in 1954, started livestock clinics in 1964, and got the Cattle Feeders' Day rolling in 1970.

The completion of the Farm and Home Center stands as one of the major accomplishments of his career.

His work was recognized in his selection as one of the nation's top 10 county agents in 1956, USDA's

Superior Service Award in 1957, the Distinguished Service Award from his peers in 1961, numerous extension service awards, the state's master educator award in 1977, and most recently, his being named livestock man of the year in 1979.

Max Smith, in his 1216 columns done for **Lancaster Farming**, has been a weekly change agent for farmers throughout our readership area.

He has seen change occur about him, change — such as the loss of farmland — he was powerless to stop. Many times he publicly decried the loss of farms in Lancaster County and neighboring areas.

He made an exception to the politically neuter positions taken by most county agents to support actively the cause of land use planning and conservation of our prime and prized soil resources.

More than anything, Max Smith had to change himself in order to stay

one step ahead of farming's trends.

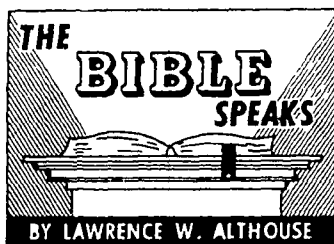

The very environment in which he works, the Farm and Home Center, is a symbol of the trends to change and modernization which he led.

He started as a county agent in an era when open-pollinated corn was not unusual. He educated himself, the farmers, and the youth with whom he worked into the age of corn hybrids, into the chemical era, through the tillage revolution.

The 4-H steers which are so much a part of his life went from blocky purebreds to stretchy three-way crosses. Youth programs and their clientele have changed.

Through it all, Max Smith was able to evaluate, accept, and change his ideas and still lead farmers and their children down the road to newer methods.

For all the farmers and farmers-to-be whose lives you touched, Max, thank you. Through it all, our admiration hasn't changed.

A GOOD OFFENSE March 29, 1981

Background Scripture:
Matthew 24:36 through 25:46.

Devotional Reading:
Joshua 24:16-24.

In professional football these days it is commonly accepted that it is the defense that wins the games. Whether or not that will hold up to all tests, I don't know. But it is obvious that a team with a poor defense is particularly vulnerable.

At the same time there are many areas of life where another "The best defense is a good offense." It seems to me that this is particularly true of the Christian's concern for the judgment of God. We may best defend ourselves in that judgment by a positive life of commitment to God's service.

Lamps Without Oil

So it is also with the coming of the kingdom of heaven. As we indicated last week, our best posture is not one of defending ourselves against that day, but being about our God-given tasks to live and preach the Gospel. This is essentially the message of the parable of the wise and foolish virgins. Their best defense against the coming of the bridegroom, was not an excuse for their tardiness, but a lamp full of oil held in readiness.

What was the essential difference between the wise and foolish virgins at the

wedding feast? It was not that the wise virgins were inherently "better" than the foolish ones. They all had the same chances and opportunities. The foolish virgins were lacking, not because they hadn't been able to find oil for their lamps, but in that they had failed to do what they could do: "For when the foolish took their lamps, they took no oil with them; but the wise took flasks of oil with them."

Lamps without oil are like lives without purpose, like potentialities without commitment, like living in the present as if there were

no future. The wise virgins had their eyes fixed upon the matter of greatest importance, the future return of the bridegroom and the need to meet him with burning lamps. The foolish virgins, probably, like Scarlet O'Hara, assumed there would be plenty of time to think about that later.

Be Prepared

How many of us live our daily lives like foolish virgins? "Someday" we will think about the meaning and purpose of life. "Someday" we will give some serious thought to God's demands upon our lives. "Someday" we will get around to being

ready for our final confrontation at the throne of God. There's still lots of time before that "someday" will come, isn't there? Or is there?

Whatever awaits us at the end of this earthly life, there are none of us who intend to arrive at that day unprepared. We all want to arrive there with the best possible defense. But unless we take steps to be prepared now, we may find that it is too late for us to fill our lamps. The best protection against that day is a life full of purpose and commitment. **TODAY!**

NOW IS THE TIME

TO CHECK VENTILATION SYSTEMS

We are into the season of the year that ventilation is very important. The fans in the poultry houses and dairy barns have been working hard through the winter months. They have accumulated dust on the louvers and screens and developed loose belts, so they are less efficient - in other words they are not moving as much air as they are rated.

This is a good time to go through your buildings and clean the fan blades, louvers and screens. Tighten the fan belts and be sure to check the inlet screens. Many times, in our poultry houses, we're not getting air circulation because the air cannot enter the building.

So, clean the screens to prevent air restriction. Also, check the thermostat to make certain it's working properly. A thermostat stuck in the "on" position could

cause chilling to poultry and livestock. Poor ventilation can cause health problems in poultry houses and "off" flavored milk in dairy barns.

TO PLAN FOR OATS PLANTING

I know some farmers are considering the use of feed oats for planting this spring. This could be a mistake. Feed oats may contain quackgrass, bindweed and other weed seeds. Planting feed oats will generally result in lower yields. Any weed seeds planted will be a problem for years to come. Keep in mind that high quality seed is the smallest part of producing a crop. So, saving a few cents by using inferior or weedy seed doesn't make much sense.

On the other hand, home grown seed of varieties proven successful on the farm can be cleaned, treated and planted if the germination is 80 percent or better.

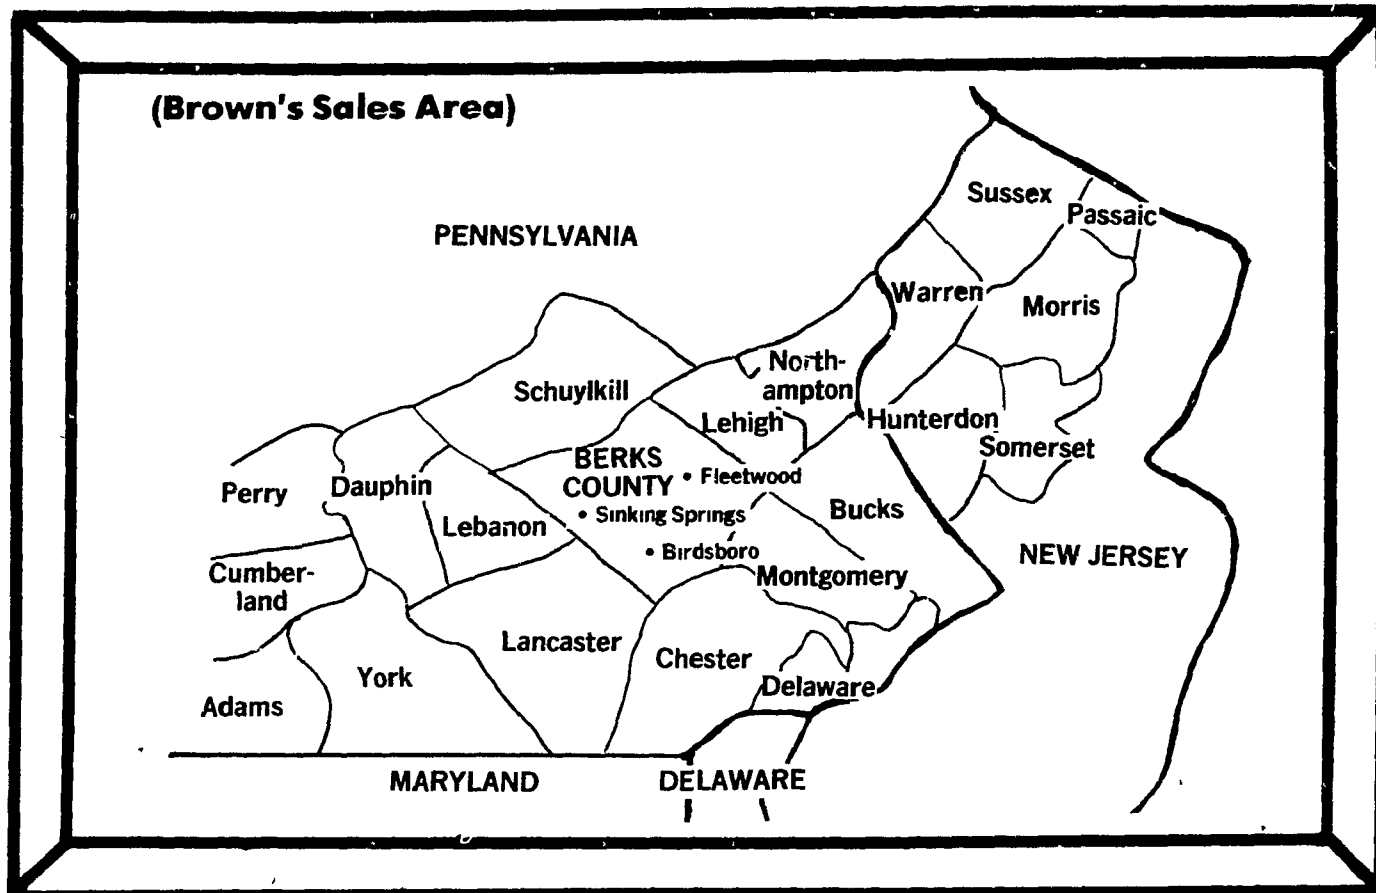

(Turn to Page A12)

HAY HAWS

"Quit complaining. Once in 10 years I ask you to help rearrange the furniture. Every year, you go out and rotate the crops and I never say a word."

IS YOUR FARM IN THIS PICTURE?

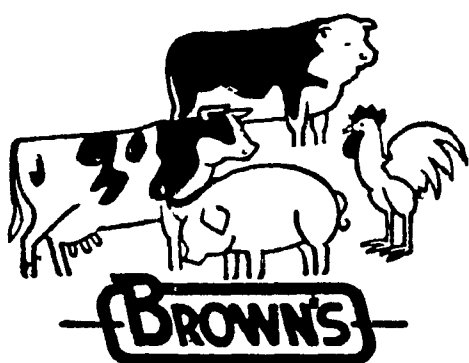

IF IT IS LET BROWN'S HELP YOU IMPROVE YOUR FARMS PROFIT PICTURE

BROWNS CAN HELP YOU BECAUSE WE:

- 1) ARE A FAMILY RUN FEED MILL WHICH IS STILL SMALL ENOUGH TO KNOW YOU!
- 2) ARE A GROWING FEED COMPANY LARGE ENOUGH TO MEET YOUR FARMS GROWING FEED NEEDS!
- 3) ARE A COMPANY WHICH STILL BELIEVES QUALITY IS IMPORTANT!
- 4) HAVE A STRONG STAFF INCLUDING TWO Ph.D. NUTRITIONISTS WHO PROVIDE THE LATEST IN COMPUTERIZED NUTRITIONAL PROGRAMS FOR ALL LIVESTOCK SPECIES!
- 5) HAVE A FULL LINE OF CONCENTRATES AND SUPPLEMENTS WHICH CAN BE CUSTOMIZED TO BALANCE THE CHANGING NUTRIENT CONTENT OF YOUR FORAGES AND HOMEGROWN GRAINS!
- 6) ARE A COMPANY WITH AN HONEST DESIRE TO HELP MAKE FARMING MORE PROFITABLE FOR YOU!

Letters To The Editor

Dear Editor:

Several misconceptions and unfounded rumors have emerged from last week's article on Mr. King's brucellosis problem.

We would like to clear the air and set all the facts straight for everyone concerned.

We purchased the herd of cattle directly from a farmer in New York who had raised many of the cows from calfhood.

After purchase all the cows and heifers were TB and brucellosis tested by a licensed veterinarian and a valid interstate health certificate was issued by the state of New York.

Upon arrival of the cattle we sold the entire herd on a state inspected dispersal with state issued individual health charts which Mr. King received.

After we learned that some months later Mr. King had reactors in his herd and one of the dispersal cows was among them we supplied the names of every buyer at the sale who made purchases to the Pennsylvania State Bureau of Animal Industry. After they retested every cow in every herd they announced no further brucellosis had been detected. In fact, we found several of the animals had been resold through

one of highest pedigreed dispersals in Pennsylvania last year.

What it all boils down to is not where Mr. King contacted the disease for with a disease like brucellosis an outbreak can appear to be spontaneous with no provocation. No dairyman or livestock broker can guarantee any animal free of a disease that extends beyond any feasible test and isolation period. The best protection is to buy from a reputable licensed source. Above all insist on a valid health chart.

We sell no animals on any dispersals that have not been tested to the requirements of the law, all our auctions are conducted along the guidelines set forth by the state of Pennsylvania.

Dear Editor,

I'm a "hired man's" wife and there is certainly no shame in that, but that phrase strikes a discordant note deep inside. Your call for fair pay was great but how about going one step further and call for a fair attitude?

Dedication, conscientiousness, and efficiency is earned by the

Dauphin 4-H Leaders Banquet, 6:30 p.m., St. Marks Lutheran Church, Londonderry Twp.

Alcohol Fuels Workshop, Lehigh County Community College, Schnecksville, continues through Sunday.

Horse judging clinic, Meadow Lanes Farms, North Wales, concludes tomorrow, 9 a.m.-4 p.m. both days.

Berks County Conservation District ASCS banquet, 7 p.m., Tulpehocken High School, Bernville.

Pa. Egg Marketing Assn. monthly meeting.

Saturday, April 4

Feeder pig show and sale, Carrolls Sale Barn, Felton, Del. show 10 a.m., sale 2 p.m.

Lehigh County FFA banquet, Vot-Tech School, Schnecksville.

Hunterdon County N.J. horse farm tour.

Pa. Polled Hereford sale, Washington County Fair Grounds, show 9:30 a.m., sale 1 p.m.

Md. Polled Hereford Assn.'s Black Eyed Susan Sale, 7 p.m., Frederick, Md. Fairgrounds.

Now Is The Time

(Continued from Page A10)

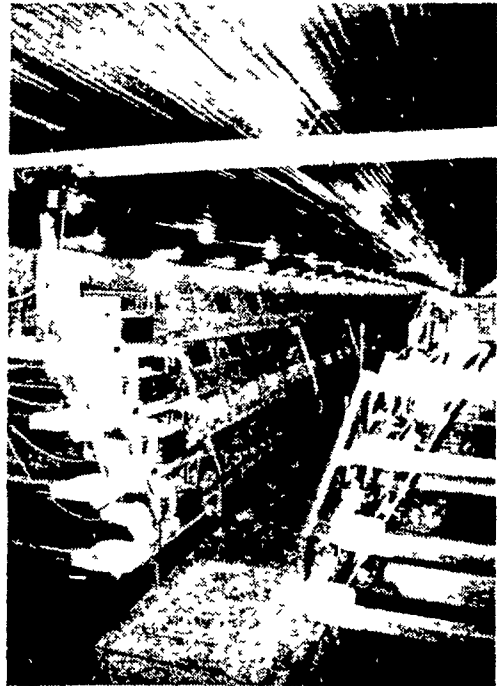

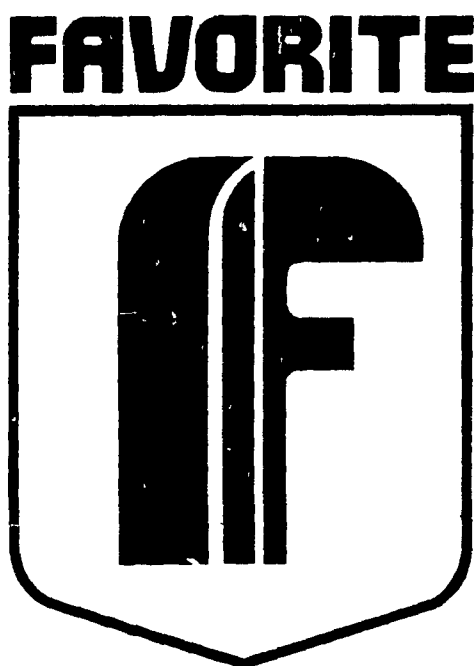

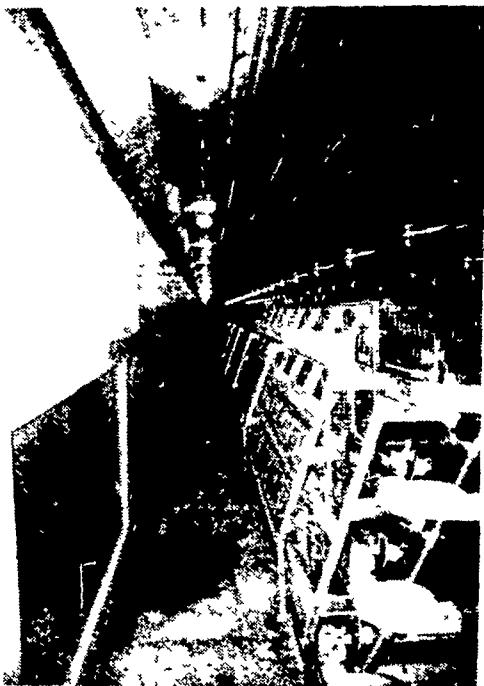

You can use the old "Rag Doll" germination method where you place the seed between two pieces of burlap - roll it and keep it moist. Then count the seeds that germinate against the total and determine the percent germination.

Our dairy agent, Glenn Shirk, reminds us to clean up our county's highways. The debris that has been discarded along our highways is not only unsightly; it is a threat to the life and health of our farm animals. As cattle graze these areas, they can inadvertently consume discarded debris. A greater danger exists when these fields are mechanically harvested, as most of them are.

In the harvesting operations, the debris is picked up, along with the forage crop, ground into small particles, and mixed with the harvested forage crop for consumption. Much of this debris is sharp and indigestible. Muscular contractions cause the particles to puncture the stomach wall and pierce the animal's heart, causing severe hemorrhaging - and death. This condition is known as hardware disease.

So, pick up trash now, before it becomes concealed in tall grass. If you are driving, keep your trash in the car and dispose of it in an appropriate manner. You'll be keeping our county beautiful, and you'll be protecting the life of those animals that are working to put food on your table.

Livestock market and auction news

Oklahoma Cattle

Thursday, March 26

Report supplied by USDA

Estimated Receipts 3500
Same Day Last Week 6055

Actual unloads expected to fall near 1,000 head short of the early estimate. Moderately active at best, feeder cattle and calves now fully 50 cents to 100 lower. Demand generally good at the decline especially for thin cattle suitable for grazing. Majority receipts Medium Frame No 1 & Mixed No 1-2 500-800 lbs feeder steers and 400-700 lbs feeder heifers arriving from wheat pastures & growing pens. Moderate attendance buyers.

FEEDER HEIFERS Medium Frame No. 1 package 138 lbs 115.00, few 325-345 lbs 84.50-85.90, few 400-500 lbs 76.00-80.80, package thin 455 lbs at 84.50, 500-600 lbs 68.00-76.90, 600-700 lbs 65.00-68.00, 700-800 lbs 63.25-67.00, largely 64.00-66.50, 800-880 lbs 61.80-65.40. Large Frame No. 1 640-775 lbs 63.00-66.00, few 800-855 lbs 62.80-64.60. Small Frame No. 1 few 480 lbs 69.00; 500-637 lbs 61.50-65.25. Medium & Large Frame No 1-2 package 494 lbs 74.50, 500-600

lbs 66.75-68.25, 600-700 lbs 61.50-66.50, 700-875 lbs 60.50-63.75. Medium Frame No 2 few 388-479 lbs 67.25-68.00, few 545-560 lbs. 63.00-64.25. Large Frame No 2 600-925 lbs 60.00-63.25, Holsteins 495 lbs 62.25, 540-565 lbs 61.60-63.30, 640-700 lbs 54.25-55.25, 700-890 lbs. 51.20-55.00.

FEEDER HEIFERS Medium Frame No 1 package 198 lbs. 94.00, few 315-370 lbs 67.50-71.50, 400-500 lbs 63.00-66.00, 500-600 lbs 60.50-62.90, few thin 511 lbs. 63.25 & 65.50, 600-700 lbs 60.00-62.50, few 600-688 lbs 62.75-64.00, package 734 lbs 61.30, part load 821 lbs fleshy at 58.60. Large Frame No. 1 few 600-618 lbs 61.00-61.80. Small Frame No 1 436-602 lbs 58.00-61.90, package 719 lbs at 53.25. Medium & Large Frame No 1-2 400-500 lbs 60.75-62.50, 500-700 lbs 59.00-61.00, few 785-865 lbs. 55.25-57.00. Medium & Large Frame No 2 460-700 lbs 53.25-58.25.

FOR THE WEEK Compared to late last week, feeder cattle and calves lost part of the week's early advance to close 2.00-3.00 higher, slaughter cows in good demand and mostly 1.00-1.50 higher; late sales Utility & few Commercial

42.75-45.40, low dressing & yield grade 3-4 39.00-41.00, slaughter bulls generally steady, yield grade 1-2 1400-1865 lbs 54.00-58.00 late. Salable receipts totaled near 13,700 head compared to 25,868 last week. The majority or 93% of the receipts consisted of feeder cattle & calves, cows and bulls numbered near 1,000 head & made up 7% of the supplies.

Leesport Auction

Couple Prime vealers 106.00 and 108.00, Choice 89.00-105.00, Good 73.00-89.00, Standard & Good 90-120 lbs. 50.00-61.00, 65-85 lbs. 40.00-50.00, few Utility 50-105 lbs 20.00-37.00. Farm calves, holstein bulls 95-125 lbs. 60.00-78.00; holstein heifers 70-100 lbs. 67.00-86.00, one 140 lbs at 94.00; beef cross bulls & heifers 70-110 lbs 64.00-95.00.

HOGS 171. Barrows & gilts steady to .25 lower. US No. 1-2 205-240 lbs. barrows & gilts 41.60-42.20, No. 1-3 200-255 lbs. 41.00-41.70, No. 2-3 200-265 lbs. 39.10-40.40, few No. 1-3 180-190 lbs 35.50-37.10. Sows \$2 to \$3 higher. US No. 1-3 280-645 lbs. sows 36.50-40.00, one at 42.00, few No. 2-3 300-730 lbs 32.00-35.75. Boars 20.00-25.75.

FEEDER PIGS 124. US No. 1-2 30-40 lbs. feeder pigs 20.00-27.00 per head, No. 1-3 35-50 lbs. 18.00-29.00, few No. 1-3 70-80 lbs. 35.00-36.00, few Utility 35-45 lbs. 9.00-14.00 per head.

SHEEP 14. Few Choice 80-95 lbs. new crop lambs 70.50-78.00. Few Slaughter ewes 29.00-31.50.

Ohama Cattle

Report supplied by USDA

Through midweek steers and heifers 50-1.00 higher. Cows 1.50-2.50 higher. Bulls 1.00-1.50 higher.

Four day receipts 13,800, last week 12,000 year ago 10,000.

An improved carcass trade combined with packer needs for immediate slaughter requirements to move steer and heifer prices higher through midweek. Best demand again centered on yield grade 2-3 steers weighing 1050-1200 lbs. and same grade 950-1050 lb. heifers. Some caution on the buyer's part was noted late in Wednesday's market as dressed beef prices weakened, but the remaining unsold supply of steers and heifers was insufficient to reflect any trend change.

Steers made up 49 pct of 5 day receipts, heifers 35 pct, cows 9 pct, feeders 6 pct.

STEERS: At midweek, five loads Choice, some Prime, mostly 3, 1100-1200 lbs. 62.00. Choice 2-4 1050-1250 lbs 60.50-61.50, several loads 61.75. Choice, some Prime, 3-4 1200-1350 lb 59.00-60.00. Mixed Good and Choice 2-3 1000-1250 lbs 59.50-60.50. Good 57.50-59.50.

Several loads mixed Good and

Choice 2-3, 1250-1350 lb Holsteins 57.00. Load Good, few standards 1150 lb. Holsteins 54.25.

HEIFERS Load and several part loads Choice, few Prime, mostly 3 1000-1050 lbs. 60.75-61.00. Choice 2-4 900-1150 lbs. 59.50-60.50. Mixed Good and Choice 2-3 58.00-59.50. Good 57.00-58.00.

Average of LS 214 detailed quotations for Choice 900-1100 lb steers 61.12; 1100-1300 lbs 60.90. Average cost steers this week 60.29 average weight 1189 as compared 59.34 and 1200 lbs a week ago average cost heifers 59.12, average weight 1044 as compared 58.44 and 1037 lbs a week ago.

COWS Cutter, Utility and Commercial 1-3 43.50-45.00, some high dressing 45.50. Canner and low-Cutter 40.50-42.50.

BULLS: Few 1-2 1200-1800 lbs 52.00-56.00, individual 158.00.

FEEDER CATTLE Near 200 head medium frame 1 steers in Good and Choice slaughter flesh 1050-1150 lbs 60.00-61.50.

HT 740, HT 754 Automatics...

Transmissions That Get The Job Done

The Allison HT 740 and HT 754 offered in Steiger Panther PTA Series tractors from 295-350 Horsepower, offer these unique features for performance and profitability.

- Provides eight or ten ideal field and transport speeds when combined with Steiger's two-speed power divider.
- Converter and automatic lock-up positions in each of the forward ranges. Converter permits tractor to start off with implement in the ground. Lock-up provides maximum efficiency in engine operating range.
- Fully automatic upshifting and downshifting in all forward ranges under full throttle and full load, as drawbar requirements dictate.
- Driveline repairs are significantly reduced.
- No downtime due to mechanical clutch replacement and repair.
- Ease of operation reduces fatigue and improves driver efficiency and comfort.
- Smooth transmission of power extends driveline life by reducing harmful shock loading.

Farm and Home to offer scholarships

LANCASTER — One of the objectives of the Lancaster County Farm and Home Foundation is to encourage the higher education of the youth of Lancaster County.

In this respect the Foundation is announcing the offering of scholarship awards in 1981, in the fields of Agriculture, Home Economics, and Nursing. Depending upon the financial need and ability of applicants, a maximum of twenty scholarships may be awarded.

Each scholarship award will be in the amount of \$750 and may be used to help defray tuition, fees, or room and board expenses at any accredited educational institution, which offers a course of study in agriculture, home economics, or nursing.

Some of these Farm and Home Foundation Scholarships are earnings from an irrevocable trust fund set up by the late Elmer L. Esbensen, one of the founders of the Lancaster County Farm and Home Foundation. The income from this trust fund will be offered annually in the form of educational scholarships through the Farm and Home Foundation.

Interested youth are urged to contact their Senior Guidance Counselor for details and an application blank.

Additional information is also available from M M Smith, Chairman of the Scholarship Committee, 1383 Arcadia Road, Lancaster, PA 17601, phone 717/394-6851.

Application forms must be forwarded by April 24, 1981

PURE PROFIT!

From 62 models in four series, there's a Kent Field Cultivator right for your operation. From 12' to 60' wide, all models are known for their durability, with the strongest shank and frame in the business. The special design Kent Magnum shanks till more consistently than do competitors. You can add Kent Coil-Tine Harrows to finish as well as cultivate. And you can even apply ammonia or herbicides at the same time. Till more efficiently with Kent, and watch your profits rise.

Tye sets the pace in soybean drills

One Drill is all you need...

to plant soybeans, wheat, barley, oats, or rice.

- * Sizes to fit your operation 80" to 360" models with 3-point and pull type hitches
 - * Adjustable internally fluted seeders adjust to dispense soybeans, wheat, barley, oats, or rice gently and at the rate you desire
 - * Double disc openers slice open the seed bed, placing the seed in front of the disc bearing—assuring uniform seed placement without scatter
- For stubble or no till planting—Tye's New Stubble Drill does the job.

"Till a trail" through the stubble with Tye's new STUBBLE DRILL. Individually mounted spring swivel coulters with 1" wide fluted blades "till a trail" through stubble, straw and other crop residue preparing a mini seed bed. For over 16 years farmers have been counting on Tye for tough, reliable equipment. Tye sets the pace with most complete line of drills—sizes, types and accessories on the market.

Tye offers the most complete line of press wheels on the market to assure you total control drilling

The Tye folding row marker provides wide marking widths without tall marker arms

312 bushels per acre

World record corn yield set

NEW BRUNSWICK, N.J. — Corn yields in the Northeast can complete with those in the big Midwest corn states, a Rutgers University researcher maintains after setting world records for corn and soybean yields in research plots.

Roy Flannery, specialist in soils at Rutgers' Cook College, and graduate student Howard Woodard proved that more than 300 bushels of corn per acre can be grown in Freehold sandy loam soil in New Jersey.

The same factors that produced 312 bushels of corn grain yielded 45.1 tons of corn silage per acre.

The researchers chose two hybrids, Agway 849X and Pioneer 3382, for their experimental plots, adding variables of plant population, fertilizer rates, and irrigating. The purpose of the

research, which is supported by a grant from the Potash & Phosphate Institute, is to get the highest yields possible; economics are not a factor.

The record yield was established on replicated plots that were irrigated, seeded with Agway 849X (40,700 plants per acre), and fertilized with the equivalent of 500 pounds of nitrogen, 300 pounds each of phosphate, and potash per acre, and with added micronutrients.

Another irrigated Agway 849X plot with 32,000 plants per acre yielded 303 bushels of corn grain and 44.3 tons of corn silage, using the same amount of fertilizer and micronutrients.

Yields like these have not yet been accomplished on replicated research plots in the Midwest,

Prof. Roy Flannery, center, soils specialist at Rutgers' Cook College, receives plaque from William E. Mohn, left, Agway seed division manager, and Michael J. Papai, manager of

Agway's fertilizer division in recognition of world record corn yield of 312 bushels per acre.

CATTLE FARMERS.... BUILD YOUR LAST FENCE FIRST!

A New Breed of Fencepost Guaranteed for as long as it's in the ground!

- Lifetime Guarantee
- Perfect for Line Fencing
- Unequaled for Electric Fencing
- No Maintenance
- Longer Lasting
- More Economical
- Easy Installation
- Fewer Posts Per Mile
- Insect Proof
- Stable in All Climates
- Keeps Working in Wet, Alkaline or Acidic Soil

Perma-Post won't rot or splinter like wooden posts, won't rust or corrode like steel. Perma-Post flexes above the ground, so it won't break, uproot or lose shape. Made of durable polypropylene plastic, Perma-Posts stand up to any soil or climate condition and needs no insulators. Perma-Post, with the lifetime guarantee, outworks, outperforms, and outlives any wood or steel post.

New semi-solid manure handling equipment makes job easy

FLEETWOOD — Showing just how easy it is to empty a pit-full of semi-liquid manure was the purpose of an Open House sponsored by Headland-Martin Inc. at the farm of Joseph and David Ruth on Tuesday.

Farmers, who took some time away from the plow on this beautiful Spring day, watched as a 'new' manure handler, called the Equalizer, "inhaled" the slurry and pumped it into a 167 bushel (struck level) spreader, known as the Martin Scavenger 1466, filling it in exactly 1½ minutes.

According to local dealer Joel Yorgy, the Equalizer efficiently loads semi-solid manure — manure that's too thick to pump and too thin to bucket. He explained when bucket loaders are used to clean out semi-solid manure from holding pits, farmers spend too much time "chasing" the manure.

Mervin Martin of Myerstown, who created this manure handling equipment, claims his manufacturing company is the only one to address the problems of handling semi-solid manure.

He said the Equalizer has been on the market for a year, and has found homes on about 50 farms in Pennsylvania, New York and the New England states. The creation of this breakthrough for loading "sloppy" manure took three years, he explained.

Martin recalled how he saw the

need for semi-solid manure handling equipment back in 1977.

"All the equipment on the market from the other companies were 'me-too's' — that is, everybody else had the same types of equipment.

The Equalizer enables the farmer to handle the biggest range of manure with one piece of equipment. It can handle anything from liquid to dry pack from box stalls."

The Equalizer, which presently costs about \$5300, fits on any tractor with HP's of 60-85.

Martin pointed out the Agway Research Farm in New York owns and has tested his piece of machinery.

"Although it's not in writing yet, they've found the Equalizer to be the most fuel efficient manure handling system on the market today," he boasted. "It eliminates agitation pumps used in other systems, and also the need to run a tractor continuously to keep the manure stirred up. And, with our equipment, there's no need to add extra water in order to pump the manure."

Martin said the Agway farm tested the Equalizer on a pit holding the manure of over 100 cows. He said the study showed a 65 HP tractor used only 15 gallons of fuel to empty the pit.

"If you take those 15 gallons and apply it to a pumping-agitation system, it would allow only 2 hours

With Mervin Martin at the throttle, the latest in semi-solid manure handling equipment, called the Equalizer, 'chews' into the pitful of manure at Vista Grande Farm, located near Fleetwood in Berks County. Martin, who developed the Equalizer specifically for han-

dling 'sloppy' manure, pumps the semi-solid waste from Joe and Dave Ruth's dairy operation into another Martin creation, a spreader called the Scavenger. Filling the 167 bushel spreader took only 1½ minutes.

worth of pumping. To empty the pit, it would take five-times the fuel," said Martin.

Along with the Equalizer, Martin has developed two manure spreaders. The spreader known as the V Model has recently been patented, he said, the other, known as the Scavenger, will be patented

in the future.

In its first year on the market, the Scavenger has been sold to 250 farmers, Martin said, with an average cost of \$9000. The V Model, available since 1977, has an average list price of \$7000, with about 450 models sold to date.

Martin said he's optimistic

about this year's sales volume and anticipates a combined sales of 500 units.

For more information on the manure handling equipment contact Carl Just, sales manager, Headland-Martin Inc., 841 Kutztown Road, Myerstown, PA 17067, telephone 717/933-4157.

Md. cattlemen to meet

MT AIRY, Md. — The Maryland Cattlemen's Association will hold their Annual Meeting and Election of Officers April 2, 6 p.m., at the Mount Airy Fireman's Activities Building in Mt. Airy, Maryland on Rt. 27 just off I-70.

Dinner will be served at 6:30 p.m., advance reservation required.

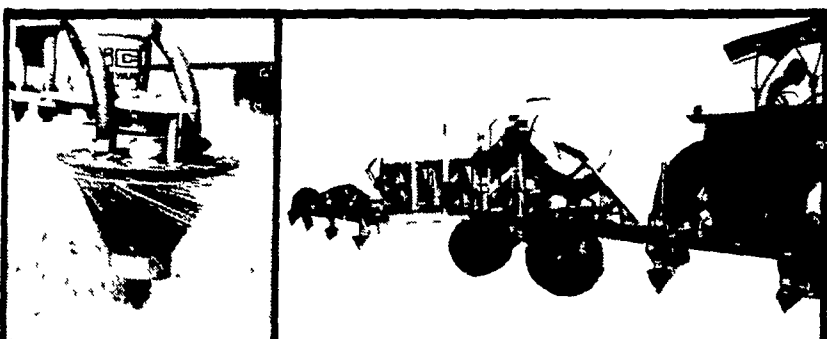

The program will feature Al

Evans who is associated with the Maryland Food Producers. Evans will offer ideas and suggestions to help the Cattlemen's Association with their new beef promotion project.

All interested persons are invited to attend. To make dinner reservations call 301/489-4519 before March 29.

GROUND PLANE

It could cut some pesticide cost 50% or more!

Controlled droplet size offers three major advantages:

1 REDUCTION IN CHEMICAL RATES
Although additional research is required, growers in 1980, on thousands of acres throughout the U.S.A. cut dosage rates 50% or more. Savings reported by growers were as high as \$20.00 per acre.

2 REDUCED WATER REQUIREMENTS
C.D.A. lets you cover more acres per day! Hauling water is all but eliminated. Time lost refilling is all but eliminated. The Ground Plane with one 150 gal. tank can cover more than 300 acres without refilling.

3 REDUCED DRIFT

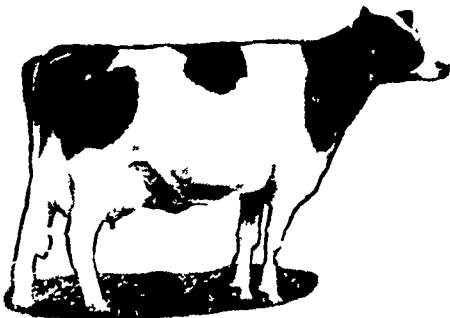

At wind speeds of 25 k.p.h. rotary atomizers produce less than half the number of drifting droplets that a fan nozzle in winds of only 5 k.p.h. produces. This means greater safety to other crops, animals, fish and humans.

¹Trademark of Stauffer Chemical Company ²Trademark of FMC Corporation
³Trademark of Mobil Chemical Company ⁴Trademark of Dow Chemical Company

COUNTER® outperforms all others.

Before you decide which insecticide to use, compare performance.

It's year-after-year consistent control that pays off in top yields and return on investment.

Take a good, hard look at insecticide performance.

After you do, we think you'll choose COUNTER® 15-G soil insecticide-nematicide.

Broad-spectrum Control At One Low Rate.

COUNTER is the only pesticide that controls rootworms, wireworms, seedcorn maggots, symphylans and nematodes all at one rate, the low rootworm rate of application.

Only COUNTER can give you that kind of performance.

The Best Rootworm Control You Can Buy.

When you apply COUNTER at the recommended corn rootworm rate, you'll not only get broad-spectrum control, you'll

also be getting the best rootworm control you can buy.

These published university tests of commercially available insecticides prove that none can equal the performance of COUNTER against corn rootworms.

Real Cost Per Acre.

Real cost is not the price per bag, but the cost of the amount of product you need to effectively treat one acre.

For example, if the amount necessary for corn rootworm control costs \$8.00 an acre, and control of wireworms or nematodes requires 1-1/2 to 2 times the rootworm rate, then effective broad-spectrum control costs \$12.00 to \$16.00 an acre.

That's why the single-rate control of soil pests that COUNTER provides can save you money.

Rebate. \$100 Or More.

If you grow soybeans as well as corn, you can take advantage of

the COUNTER/PROWL rebate. Here's how. Just buy at least 25 gallons of PROWL® herbicide, and Cyanamid will rebate directly to you \$2.00 per gallon.

That's a minimum \$50 rebate on PROWL.

The more PROWL you buy, the larger your rebate.

Buy 800 pounds of COUNTER along with your PROWL purchase and get a bonus of another \$50. That's a total of \$100 or more. See your dealer for details.

So when the time comes to choose an insecticide, look around and compare.

Then get the one that gives you top corn rootworm control and broad-spectrum control at one low rate plus a rebate. COUNTER.

Always read and follow label directions carefully.

COUNTER® 15-G

ABC Annual Meeting features PDA Secretary

CENTERVILLE — Paul Weaver of Royersford, District 1, was elected to the Board of Directors of Atlantic Breeders Cooperative Wednesday during the Co-op's 17th Annual Meeting, held here in Lancaster County at the Quality Inn.

Four other directors were re-elected to serve another three-year term. They are Harold G. Bollinger, Newmanstown, District 3; Clyde S. Robison, Coal Center, District 11; H. Donald Allison, Clymer, District 12, and Leroy Shrock, Dayton, District 13.

Forty-eight resource/promotion committeemen were selected to serve a one-year term.

According to David Slusser, vice

president, who chaired the meeting for recuperating president Herman Stebbins, the annual meeting was a low-key wrap up for all the local meetings attended by 3650 ABC members.

In his report to the group, entitled "Past, Present, and Future", Slusser said ABC members can boast some of the highest producing dairy cattle in the world. He added, ABC has played a significant role in the genetic improvement of dairy herds and handles the most popular bulls in the world.

Slusser remarked the original purpose for creating the cooperative was to prevent the spread of disease, make top bulls available to members, and

Five directors were elected to sit on the 15-member ABC Board during the Annual Meeting, held Wednesday at the Quality Inn in Centerville. Newly elected to the post is Paul Weaver, left, Royersford. Re-elected to serve

a 3-year term are: Harold G. Bollinger, Newmanstown, Clyde S. Robison, Coal Center; H. Donald Allison, Clymer; and Leroy Shrock, Dayton, far right.

Pennsylvania Secretary of Agriculture Penrose Hallowell is a dairy farmer who can wear two hats — at least two ABC hats — one for Summer and the other for Winter. Making the presentation during the Annual Meeting of Atlantic Breeders Cooperative is David Slusser, vice president.

eliminate the hazards of handling bulls on the farm.

"We've helped keep the family farm alive," he said, "with profitable cows."

Slusser commented the future looks bright for the \$5½ million Co-op thanks to a thriving international and domestic market. He stressed the need to sample more bulls in the future to keep abreast of the selection pressure — calling for more barns, people and money.

"In the future," Slusser said, "we need to know more on the protein information on bulls and their dams, along with more records on health and reproductive problems. We need to emphasize the traits with more economic importance than type rating for straight top lines."

In his financial report, ABC Director of Finance David

Mellinger stated the Co-op has increased its revenue by 13.2 percent, jumping from \$4,900,000 in 1979 to \$5,527,457 in 1980.

Mellinger pointed out the expenses of the company also increased by 13 percent. However the Co-op realized a net profit of \$625,391 — up 15.4 percent from 1979. This has stayed 3 points above the inflation rate of 12.4 percent, he noted.

ABC Manager David Yoder commented he has "no doom and gloom report" for the Co-op. However he said keeping up with economic concerns has never allowed the Co-op to grow stagnant.

Pennsylvania Secretary of Agriculture Penrose Hallowell, a dairy farmer and ABC member for 30 years, renewed acquaintances during the afternoon session of the annual meeting. He spoke to the

group on current marketing and problems in the agricultural world.

Hallowell stated although the agricultural budget has been cut by the state legislature, there will be no decreased support for the Farm Show. The cuts, he said, will be in services and inspections.

Addressing the prospects of a new Farm Show Complex, Hallowell said, "Getting the millions needed to build the new facility is a dream, getting the necessary bills through the legislature will be a nightmare."

Hallowell sympathized with the problems farmers are facing with inflation and energy. He reported on the progress of the methane production at the Waybright dairy farm in Adams County.

"That would be a farmer's dream come true — to be able to send a bill to PP&L and Met-Ed," Hallowell said.—SM

Northern Lebanon farmers lend a hand

Nearly 70 Northern Lebanon Adult Young Farmers turned out last Saturday to lend a hand to one of the area's newest farm owners, Dale Maulfair. Not a newcomer to farming by any means, Maulfair is one of Lebanon County's top Aryshire breeders. Maulfair,

who recently purchased a 70 acre farm south of Fredericksburg, is converting a former three-story poultry barn into a heifer barn and equipment storage. Pictured here is the afternoon crew, complete with crowbars.

NFO speaker cites production costs

DOYLESTOWN — "A simple moral issue is at work in our country with ball players supposedly worth more on the salary scale than anyone else, with other trades in between, and food producers at the bottom," said H Kenton Bailey, speaking before over 200 members and friends at the annual dinner of the Bucks County Unit of the National Farmers Organization.

"Never mind that farmers cannot stay in business, that our youth cannot afford to start farming and are not encouraged by banks and lending institutions to take on such a debt, food producers should still be satisfied with 60 percent of parity, or whatever the government dictates," Bailey said.

"A producer receiving 60 percent of parity in prices, is getting 60 percent of what it has cost him to produce the product. If he accepts that continually, he also accepts indebtedness and insolvency and finally, selling out."

"A tank of milk, a cull cow, a bushel of grain or a dozen eggs is only used-up energy and services," Bailey said, "and production

cannot continue for less than the cost of production for long. Public opinion has pushed the idea that it is alright to put a price on every other product, reflecting its cost of production, except food! We seem to have the idea that it's immoral to put a price on that!"

"Former Secretary of Agriculture Bob Bergland said that the irony is that if each person would be willing to pay five cents more for food per day, and that five cents would get back to the farmer, farmers could receive 100 percent of parity for his production, new farmers could start, and money would flow back into the economy that would generate new jobs throughout the whole system," Bailey said.

"Each one of us is either part of the problem or part of the solution," he said.

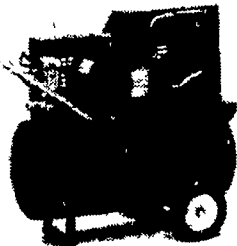

"The National Farmers Organization has a nation-wide marketing and delivery system, and bargains with buyers for cost of production prices for its members, but it must be used to be effective."

Hog and pig report seen as good news

DES MOINES, IA. — USDA's hog and pig report which showed a nine percent reduction in numbers and an 11 percent drop in breeding stock was termed "good news for pork producers" by the National Pork Producers Council.

"We feel producers are headed in the right direction towards fewer numbers and lower market weights," said Orville Sweet, executive vice president of NPPC, "however, we hope the industry has learned from its past mistakes and will not over react to this first bit of good news."

Sweet referred to the previous reports by economists which predicted high market prices for hogs in early 1981 which led producers to hold their hogs in anticipation of higher profits.

As a result, heavy hogs and an

emotional reaction to the December report caused over supply and market prices to drop.

"This current report is an indication that we have an opportunity to escape from the red ink situation experience by most pork producers in the last several months," said Sweet. "However, we won't celebrate too quickly because we will still be vulnerable to psychology and emotional reaction in the market place for the next year."

For the consumer there is still good news, stable supplies of pork should continue throughout the year.

"In fact," said Sweet, "the long range supply of pork is better assured if there is profitability in the industry."

Corn yield

(Continued from Page A17)

where high water-retention soils are well suited to growing corn. They are a breakthrough in the East where average on-farm corn yields are below 100 bushels an acre.

While such management practices as row spacing, method and timing of fertilization application, insect and weed control, and liming are important to the study, Flannery singles out irrigation as the most vital.

He points out that the record yield was achieved on a Freehold

sandy loam soil at the Soils and Crop Research Center, part of the New Jersey Agricultural Experiment Station of Rutgers University, at Adelphia, N.J., in one of the hottest and driest summers on record.

Flannery and Woodard used plastic tubing for trickle irrigation in the research plots—a system that uses less water, more effectively, than overhead irrigation systems. The trickle system puts the moisture near the root system of the plant where it is needed, and little water is lost through

evaporation into the air.

Total rainfall for the New Jersey site of the research was 14.9 inches from May through September. The researchers added 10.6 more inches of water through irrigation, bringing the total of 25.5.

Flannery also stresses the importance of insect and weed control, areas that he calls "very critical," and said they kept these two factors as ideal as possible for the study.

He also puts emphasis on the importance of liming, pointing out that 1500 pounds of total oxides per acre were applied between sampling and planting; limestone was broadcast and plowed down.

The research encompasses the "total package" concept that Agway has been promoting over the years, according to Flannery.

Flannery is quick to say that conditions used in the research probably are not feasible for farmers, but results do show that northeastern farms have the potential for considerably higher corn yields.

Give Eggs a Break

Irwin named

(Continued from Page A1)

Guidance Award through the National Association of County Agricultural Extension Agents for his service to youth.

In the following year, he was honored by the Pennsylvania Association of Farm Cooperatives, receiving the Master Educator Award.

In recognition of conducting innovative educational programs, Irwin received the National County Agent Association's Achievement Award in 1975.

Born and raised on a general dairy and poultry farm in the Altoona area, Irwin graduated from Penn State in 1949 with a degree in agricultural economics.

His first assignment was as a teacher in a GI Agricultural Training Program in Blair County.

He then assumed a series of agribusiness career assignments, serving in managerial posts with the Pennsylvania Farm Bureau in Punxsutawney, Venango and Westmoreland County. Following the merger with Agway, he became a unit manager in Westmoreland County.

In July of 1967, Irwin joined the Lancaster County Extension staff as assistant county agent. He was named associate county agent in 1968 and became a county agent in June of 1976.

In his many poultry industry activities, Irwin serves as advisor to the Lancaster County Poultry Association's Board of Directors. He is a Capitol Region Director of the Pennsylvania Association of County Agricultural Agents. He is an Elder and Trustee of the Bethany Presbyterian Church of Lancaster.

Irwin becomes the third in line of leaders of Lancaster County Extension that began with the late Floyd "Dutch" Bucher back in 1913 and continued through the just-completed 44 years of Max Smith.

"I will work toward upholding the high standards of Extension activities and service that began under Dutch and continued under Max," Irwin said.

"Educational activities are becoming more and more important in today's agriculture, not only explaining the true role of our farm families but helping them keep abreast of the rapidly changing agricultural technologies."

"We have a tremendous natural resource here in Lancaster County in our agriculture and it is up to all of us to continue working together to make it used to the best

New Ridomil

For outstanding control of black shank and blue mold in tobacco.

If you need effective control of tobacco's two worst diseases, then ask your dealer about new Ridomil®. But see him soon. Because there simply isn't enough Ridomil available this introductory season.

Fact is, Ridomil gives you excellent control of black shank in flue-cured tobacco and blue mold in all tobacco. Just one preplant incorporated treatment of Ridomil before bed formation and transplanting destroys fungi in your soil. After transplanting, Ridomil works systemically inside your tobacco to protect against disease attack all season long.

What's more, Ridomil can be tank-mixed with contact nematicides/insecticides to give you the control and application flexibility you need.

So this season, put new Ridomil into your tobacco. And keep black shank and blue mold fungus out.

State Holstein Show to run this week

HARRISBURG — The Pennsylvania State Holstein Show & Sale will be held April 1 and 2 at the Farm Show Complex in Harrisburg.

Twenty-three Pennsylvania bred heifers which were entered two years in advance will compete in the First Annual Keystone Holstein Futurity Show. The futurity judging will begin April 1 at 6:30 p.m. in the small arena.

Pennsylvania dairy farmers should be commended for their support of this show. About 100 families have entered 490 animals in the competition. The state show begins April 2 at 4 p.m. in the large arena of the Farm Show Complex.

"Pennsylvania dairy farms are always growing better," State Agriculture Secretary Penrose Hollowell said.

Eight individual winners from last year's state spring show went on to be named All-Pennsylvania winners. Six of these eight were nominated for All-American honors. 'Nothcroft Ella Elevation,' grand champion female at last

year's show, was named All-American aged cow. She is owned by Paul H. Knight of Woodbine Holsteins, Airville, York County.

"Winners at the state show competed for banners and trophies. Even more important," Hollowell said, "is the evaluation of the individual worth of each cow or calf when compared with animals across the state."

A total of 360 animals will cross

the auction block April 1 and 2.

A calf sale with 230 head consigned begins at 10:30 April 1 in the small arena.

Another 130 bred heifers will be sold at auction on Thursday, April 2, beginning at 10:30 a.m.

Sale calves must have been born in 1980; dams must be classified good plus or better and sires must be plus-proven for milk production. Bred heifers must be two to eight months bred at the time of

sale and bred to freshen before three years of age.

Dam and sire requirements for bred heifers are the same as for calves.

Hollowell noted that at least one-half of the sale calves and one-third of the bred heifers come from dams with a Very Good or Excellent pedigree.

All sale entries will sell and all sale animals are eligible for show April 2. Sale cattle will be

available for inspection beginning Tuesday evening, March 31. Sale catalogs are available at the sale or through the Pennsylvania Holstein Association, 839 Benner Pike, State College, PA 16802.

The Pennsylvania Holstein Show & Sale is sponsored by the Pennsylvania Holstein Association in cooperation with the Pennsylvania State Farm Products Show Commission.

More tests for PCB contamination planned

HARRISBURG — The Pennsylvania Department of Environmental Resources today announced that additional tissue samples will be taken from the livestock on the Chester County farm found to be contaminated with PCBs in late February.

According to DER, previous samples of beef and pork taken March 6 from the Wyebrook Farm in West Nantmeal Township and tested by the state Department of Agriculture to

and two parts per million (ppm) of polychlorinated biphenyls (PCBs). The U.S. Food and Drug Administration recommends that people do not consume meat containing more than three ppm of PCBs.

Additional samples are being taken for testing by the state Department of Agriculture to

confirm the previous test results.

Earlier this month DER reported that five drums of oil contaminated with PCBs were discovered on the farm on Feb. 20.

Concentration of PCBs also were detected in the soil and sand in an area about 75-by-120 feet on the property and in a chicken egg produced on the farm.

Tests revealed that the 20 chickens on the farm contain high levels of PCBs and were killed. The chickens and the eggs they produced were consumed only by the occupants of the farm.

Tests also revealed that the soil contamination is 'localized' and does not appear to present a major health hazard.

Fiberdome SILO CHUTE

made with fiberglass, the material of the future — and proven in the past —

The Fiberdome chute is designed and engineered to be installed on most types of silos. Its structure allows it to withstand the toughest beating the weather elements or silo unloading systems can possibly dish out.

The chute is constructed in full 7 1/2' sections to minimize the number of joints. Connecting joints have a 2 1/2" tongue and groove design to keep feed in and water out. The large ribbed construction adds stability and strength.

Fiberglass is durable, corrosion-proof, attractive and translucent, allowing sunlight to pass through. Sunlight quickly dries interior moisture in the chute. The hard gleaming gelcote surface will remain for many years.

Guernsey Breeders celebrate golden anniversary

BY DEBBIE KOONTZ

LANCASTER — Over 250 members of the Pennsylvania Guernsey Breeder's Association turned out for the banquet held by the Association last Friday night in recognition of their 50th anniversary.

Awards were presented to members of the Association, and the PA Junior Guernsey Breeder's Association as well.

Jelly beans, flowers and Guernsey cow replicas adorned every table and later were awarded to the youngest and oldest members at each table.

Guest speaker for the evening was Eugene C Meyer, managing editor of *Hoard's Dairyman* who spoke on "Dairying as it looks from here."

Pennsylvania Secretary of Agriculture, Penrose Hallowell, payed a special visit to the banquet and briefly commended the Association and the breeder's on "tremendous work in the dairy business."

A surprise recognition went to Lee Yost, business manager for the Association, by the members of the Junior Guernsey Breeder's Association for "all his help and support time and time again." Alisa Fava presented Yost with a present, an anti-muzzle loader, in behalf of the Junior Association.

An award for high herd milk and fat for 1980 went to Mervin K Myers, Littlestown, who milks 56 cows with an average of 14,088 pounds of milk and 705 pounds of fat.

High cow for milk and fat award went to Fred and Evelyn Crider, Nottingham. Their cow, Fre-Lyn Kelloggs Prince Sue averages 23,993 pounds of milk and 1085 pounds of fat.

Junior awards, presented by the Pennsylvania Junior Guernsey Breeder's Association, went to Gwen Witmer of Dalmatia, named outstanding girl, and Jeff Benedict of Waynesboro, named outstanding boy.

Junior production awards were as follows: 2 yr. old milk and fat award - James Harding of Brookville for Maplevale Petes Missy, 14,524 pounds of milk and 613 pounds of fat; 3 yr. old milk and fat award, Barry Lehman of York for Honeycrest Telestar Esma, 16,133 pounds of milk and 703 pounds of fat; 4 yr. old milk award, Judith Harding of Brookville for Maplevale PN Lindsey, 13,986 pounds of milk and 598 pounds of fat; 4 yr old fat award, James Harding of Brookville for Maple Royal Sharon, 13,932 pounds of milk and 668 pounds of fat; 5 yr old and over milk and fat award, June Beatty of Indiana for Ikes Joyce of Al Mon Farm, 16,010 pounds of milk and 800 pounds of fat.

Tina Rutter of York received the George W. Snyder award, presented for Champion at Junior Dairy Show, 1980. She received a pewter bowl.

The Sewickley Award went to Kenneth Corle of New Enterprise, presented for Grand Champion Youth Show, Pennsylvania Farm Show, 1981. Ken received a large trophy for his efforts.

Master of ceremonies for the banquet was Grover Gouker, Jr. from the Dale Carnegie Institute.

Entertainment was provided by

An award for high herd milk and fat went to Mervin Myers, right, who milks 56 cows with 14,088 pounds of milk and 705 pounds of fat. Presenting the award is Peter Witmer.

Over 250 Pennsylvania Guernsey Breeders, friends and family members attended the anniversary of the Association Friday night at the Host Farm in Lancaster.

Guest speaker for the 50th anniversary was Eugene Meyer managing editor of *Hoard's Dairyman* who spoke on "Dairying as it looks from here."

Secretary Penrose Hallowell made a surprise visit to the Guernsey Breeder's banquet Friday night.

the Milton Hershey Boy's Choir.

Ginger Meyers, past assistant to Lee Yost, and Millie Linde, National Guernsey Queen, were on hand to present awards.

Stoneware mugs, each displaying the replica of a Guernsey cow, were provided by Amy Romaniec of High Horse Farm

Pottery, Pine Grove Mills. The mugs served as awards for the Junior Production Awards segment.

The banquet was followed by a special Blue Halter Calf Sale and the 50th anniversary sale on Saturday at the Guernsey sales pavilion.

Lee Yost, business manager for the Association, was honored for his service by the Junior Breeder's Association. Giving him the surprise, an anti-muzzle loader, is Alisa Fava, president of the Junior Association.

Peter Witmer (right) gives Jeff Benedict of Waynesboro a mug for being chosen outstanding boy by the Junior Guernsey Breeders.

Gwen Witmer was named outstanding girl by the Pennsylvania Junior Guernsey Breeder's Association. Handing her the award is Peter Witmer.

Guernsey Breeder's Assn. meets for 50th annual meeting

LANCASTER — The 50th anniversary of the Pennsylvania Guernsey Breeder's Association got underway last Friday at the Host Farm with highlights including a business meeting, awards banquet, noon sale luncheon, 3rd Blue Halter Calf Sale and the 50th Anniversary Sale.

Top news from the business meeting was passing of a

resolution by the PA breeders stating that under no circumstances would the members of the Association support the introduction of red and white Holstein genes into the purebred Guernsey population. The resolution came as a result of the American Guernsey Cattle Club's consideration to crossbreed red and white Holsteins with Guernseys.

Ginger Meyers, a member of the Association and past assistant to Lee Yost, business manager, said, "We want to keep the pure breeds. We want no chance of buying an animal in the future that somewhere in the past was a result of a crossbreed."

Other business concerned the reelection of new directors. Albert

Hack, Berwick, District 1, Calvin Mauser, Elizabethtown, District 8, and Mervin K. Myers, Littlestown, District 10 were all re-elected. Jesse Balmer, Lititz, District 11 was ineligible to serve a third term, having served two terms already, so Donald Brown of Oxford was elected to take his place.

The position of president remains with Joseph Fava, as does the position of secretary with Elsie Wolff. However, Albert Hack of Berwick was named to serve as new vice president, replacing Robert Smith of Bedford.

Jeffrey Staner of Windsor was elected to replace Tom Groff, Sales

Guernsey calf brings \$4700

BY DEBBIE KOONTZ
LANCASTER — Crumdale
Finances Rose pleased the crowd
of over 400 which gathered for the
PA Guernsey Breeder's

Association's 3rd Blue Halter Calf
Sale and 50th anniversary sale last
Saturday by bringing a whopping
\$4700.
The open heifer, born September

30, 1980, was consigned by Richard
and Steve Staner of Windsor and
comes from one of their Villa Crest
bulls. According to Ginger Myers,
celebration committee member,
every cow from this bull in the past
two generations has been scored
excellent. "We have a lot of hope in
this calf," she said.

The calf's dam is Kelsos Nuggets
Rosalie with a high testing record
of 15,083 pounds of milk and 839
pounds of fat.

Rose was purchased by Larry
Georgeson of Madison, Wisconsin.

But this calf was not only the top
and first calf sold, but was also
sold at a price equal to that of the
top cow.

Hollow View Top Command
Holly, consigned by J. Hammond
Dugan of Washington, D.C. and
bred by Scott Wolff of Quarryville,
was top seller during the an-
niversary sale.

The bred heifer, due April 7, was
bought by Boulder View Farms of
Baraboo, Wisconsin.

Holly's dam has a high test of
14,537 pounds of milk and 737
pounds of fat.

Second top seller at the an-
niversary sale was Keystone Big T
Jennifer, bred and consigned by
Roger and Kathy Cmapbell of
Halifax John Ayars of

(Turn to Page A28)

Crumdale Finances Rose was the top selling calf at the Blue
Halter Calf sale Saturday. Standing with her are Millie Linde,
National Guernsey Queen, Richard Staner, Steve Staner, Jeff
Benedict and John Merryman, auctioneer.

Lancaster Farming, Saturday, March 28, 1981—A27

Hollow View Top Command Holly was top selling cow at the
Guernsey sale, bringing the same amount as the top selling
calf, \$4700. She was purchased by Boulder View Farms from
Baraboo, Wisconsin.

BENDER'S SALES AND SERVICE

RD #2 Mifflinburg, PA
Phone 717-966-1173

Over 400 people turned out for the Blue Halter Calf Sale, the 320th special Guernsey Sale and the Anniversary Sale, all held Saturday at the Guernsey Pavilion along route 30.

Guernsey sale

(Continued from Page A27)

Mechanicsburg, Ohio, was Jennifer's buyer. She sold for \$4400.

Top seller at the 320th special Guernsey sale was Brown Brooks Lassie, at \$1350. Bred by Carl Braves and consigned by Greystone Farm, Inc., this cow will journey to the farm of Robert and Faye Lydick, Blairsville.

Lassie has a high test of 13,593 pounds of milk and 661 pounds of fat.

Twenty-four calves sold at the Blue Halter sale at an average of \$1249 each. Other top sales were 3rd, Willows Telestars Belle, sold to Derek Fowles of Montgomery, Massachusetts for \$2200, 3rd, Walnut Lane Michele, bred and

consigned by Rodney and Darlene Stiff of Mercersburg sold to Roger Detmer of Berkley, Michigan for \$1850.

Junior Guernsey members from any state received a ten percent discount from the selling price of all calves sold at the sale.

Thirty-three cows sold at the anniversary sale for an average of \$2231 each. Third top sale was Penn Del Futures Mabel, bred and consigned by Raymond and Louise Witmer of Willow Street, sold to Scott Kriebel of Benton for \$4100.

During the 320th special sale, 22 cows exchanged hands at an average of \$752 each. Second top seller was Greystone Choice Helma, bred and consigned by Greystone Farm, Inc. of New

York, sold to Gladys Knepper of Chambersburg for \$1250. Third highest sale was Greystone Dale Kippy, bred and consigned by Greystone Farm, Inc., sold to Richard Germann of Bremen, Indiana for \$1200.

The 320th special sale had one of the best lots of Guernsey cattle ever sold at a Lancaster sale according to the Association. Greystone Farm, Auburn, N.Y. consigned 27 head; 17 cows all with good records, 7 heifer due in late spring and early summer and 3 open heifers. Jon Bon Farms, Orangeburg, S.C., sent 20 bred heifers all from high plus A.I. sires and tested dams.

The Guernsey sales were preceded by a free luncheon at the pavilion.

Sales were managed by the Association and the Merryman Co. of Sparks, Md. John Merryman served as auctioneer.

Jeff Benedict keeps a firm hand on the calf that went on to be top seller, bringing a whopping \$4700.

Around the world, in any language, this means "tractor."

Just ask anybody.

Talk to a widowed school teacher named Claribel Quvabe. She lives in Swaziland and uses a Massey tractor to help her bring in a critically important cash crop — sugar cane.

Ask Kuhn Ting Amnajsing of Parkchong, Thailand. He started 15 years ago with 16 acres, \$100 cash and a hoe. Now he owns two MF tractors and earns extra income by doing custom work for his neighbors.

Or ask Charles Cutshaw, who uses nine Massey tractors to do custom work and farm 1,250 acres in Scott County, Kentucky. That's a lot of Massey horsepower in horse country.

All over the world, in nearly 200 countries, you'll find many thousands of people who depend on Massey-Ferguson tractors for their living ... or even their survival.

That's not surprising, because Massey is the free world's largest manufacturer of tractors.

World-wide leadership doesn't just happen.

There are some very good reasons why Massey-Ferguson is a world-wide leader when it comes to tractors.

One factor is a succession of product innovations. Take the invention of the Ferguson 3-point hitch system. This hydraulic system integrated the tractor with its implement, and greatly improved performance in the field.

Much more recently, Massey added a new dimension to tractor performance with the electronic draft control on our big 4-wheel drive tractors. It electronically adjusts to changing soil conditions, and there isn't another system like it on any tractor produced in North America.

Certainly the Perkins diesel engine has also contributed to the acceptance of Massey tractors. These engines were well known for fuel efficiency long before fuel efficiency became important to American tractor buyers.

It all comes down to a combination of hard-working products and honest value that enables Massey-Ferguson to produce an average of approximately 140,000 tractors every year. And Massey products are manufactured or assembled in 83 factories in 30 countries around the world.

Twelve of those factories are in North America, including the ones turning out MF tractors for U.S. and Canadian farmers — the most productive farmers in the world.

Massey makes sense, right here at home.

World-wide success indicates more than just a good product.

It's evidence of a dedicated world-wide dealer network, supported by a global parts supply and service system second to none.

You can be sure the company that can back a tractor working in a jungle will stand behind the tractor in your own field.

See your Massey-Ferguson dealer. He's got the tractors you want, and they're ideal for your farming needs. When you buy MF, you'll know you've bought a leader.

**Now, more than ever,
Massey makes sense.**

Holding finished cattle from market doesn't pay

LANCASTER — Cattlemen who continue to feed cattle after they're ready for market get hit twice.

Overfat carcasses are being discounted as much as 14 to 16 cents a pound.

Besides, putting the extra weight on fat cattle is a losing proposition in terms of feed efficiency and high feed prices, said Homer Sewell, extension cattle feeding specialist.

Sewell cited studies around the country which showed that cattlemen usually make a mistake if they try to hold finished cattle until prices get better.

"The extra selling price per pound needed to break even for 100 pounds of gain put on in the holding period depends upon the present selling price per pound for the steer as well as the cost of the extra gain," Sewell said.

"The weight at which a pen of cattle reach a desirable degree of finish varies with the mature size, plane of nutrition in the growing and fattening phase, and other factors.

"But if the cost of an extra 100 pounds of gain is 83 cents a pound and the present selling price for a 1100-pound steer is 62 cents a pound, the price for the 1200-pound steer would have to increase 1.73 cents a pound to recover the cost of gain during the holding period.

"If the steer is held for 200 pounds of gain and the cost is 90 cents per pound for this gain, the 1300-pound steer would have to advance in price by 4.3 cents a

pound before there was a profit for the holding action."

Sewell said it takes more feed to add weight to heavier cattle because fat is higher in energy

than protein for growth gain and more of the gain is fat as cattle increase in size.

This means as cattle increase in weight, they need more energy (in

the form of feed) to add to a unit of weight.

"In other words, cattle prices would have to increase dramatically before a holding

action would be profitable enough to offset the lower feed efficiency and the price discrimination for cattle whose fat carcasses would grade number 4 or 5," Sewell said.

State dairy dispersal grosses \$277,325

HARRISBURG — The combined state farm dairy herd dispersals held last week at Allentown and Selinsgrove grossed \$277,325.

The March 17 sale of the Allentown state farm Holstein herd grossed \$167,995 for 183 head. The March 19 dispersal at Selinsgrove brought in \$109,330 for 140 head. The combination average of 181 mature cows sold was \$1,019 each.

Kirby L. Horst of Newmanstown, Lebanon County, purchased the top selling holstein in Allentown, paying \$2,500 for "Beth-Allen Elevation May-Twin."

Beth was an open cow born November 3, 1977, sired by "Todd-Acres Elevation Tops," and daughter of "Beth-Allen Kingstead May." She had a two year old record of very good, producing 15,182 pounds milk and 515 pounds butterfat, and 3.4 percent test.

The top selling cow at the Selinsgrove dispersal sold to Roy C. Wilbert of Halifax, Dauphin County for \$2,100. This Grade cow was born July 21, 1976 and was sired by "Arlinda Jet Stream Twin." Her dam was "Harrisburg Triune Sarah."

She was bred to "Selepeco Elevation Star."

Her 317 day record was 20,628 pounds milk and 801 pounds butterfat.

According to Secretary of Agriculture Penrose Hallowell, this was a very successful sale which offered Holstein breeders an excellent opportunity to purchase fine registered and grade holsteins. The sale was held in

accordance with Governor Dick Thornburgh's executive order to close out state farming operations at seven state institutional farms transferred to the Agriculture Department from the Department of Public Welfare in May 1980.

The state owned farms at Norristown, Danville and Polk will remain in operation through the 1981 crop year.

"Our key objective is to provide a smooth transition of these ten

state farm operations to the private sector," the Agriculture Secretary said.

"We have staggered the sale of dairy cattle throughout the year's grace period to avoid disruption in state livestock markets. During the past year, these farms have been maintained and improved in preparation for leasing to responsible Pennsylvania farmers."

Secretary Hallowell plans trip to Taiwan

CENTERVILLE — Pennsylvania Secretary of Agriculture Penrose Hallowell announced he will be traveling to Taiwan and Japan from May 7-20 in an effort to promote the state's agriculture products and develop export possibilities. The announcement came during the Atlantic Breeders Cooperative Annual Meeting held here on Wednesday.

"We haven't bargained tough enough for agriculture in the past," he said. "Duties on exports double the prices of our products sent overseas. The present and

past trade agreements haven't favored agriculture."

Hallowell said he "was given the green light" by Governor Dick Thornburgh on Tuesday for the trip which is sponsored by the USEA Republic of China International Trade Council.

"The funds for the trip come from the Republic of China," Hallowell explained. "They pay for two people from every state to visit their country. They're anxious to have a balance of trade and realize there must be a two-way street if the U.S. is to continue buying from

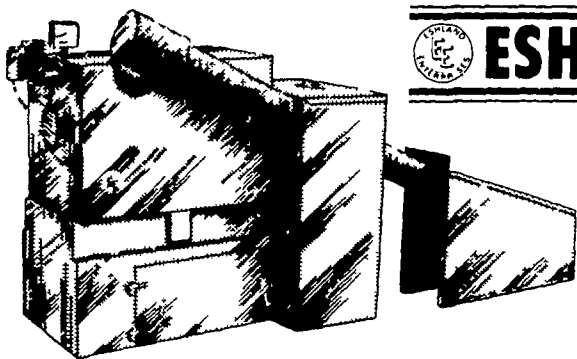

them."

Hallowell said he plans to investigate the possibilities of exporting dairy products, among other commodities such as processed fruits.

He will be traveling with Ron Davis, head of Colonial Beef, Philadelphia.—SM

BUTTER & EGGS

FINALLY! A NO MESS - NO DUST AUTOMATIC COAL STOKER FOR HOME OR INDUSTRY!

Coal Gun™

Coal Gun™ is SO Automatic and Advanced...
the only Control you touch is your Thermostat.

The Cleaner, Safer, and Simple Trouble-Free design of COAL GUN makes it one of the best buys in residential and commercial heating systems today. Conservatively rated from 130,000 - 500,000 BTU/hr, the three COAL GUN models boast the following features:

- **CONVENIENCE**
Units operate unattended up to 7 days
- **CLEAN OPERATION**
Vacuum inside unit & Cyclone Separator eliminate dust and grime
- **ENERGY EFFICIENT**
COAL GUN is smaller than most conventional coal furnaces, and costs far less to operate than most conventional coal heating systems

**Introducing
a guaranteed fixed-rate
loan for farmers.**

**The Crop Builder
13.75%**

It's the American Bank advantage.

American Bank has been committed to helping farmers since the turn of the century. Because of our close association, we are aware that 1980 was a very bad year for you. So we're making a special limited 4-week offer of a fixed-rate Crop Builder Loan. This loan can be used to finance the growing of field crops for later sale or for use on the farm as feed.

The advantages of our Crop Builder Loan are many. Once your loan has been approved, you'll be assured of getting the money you need,

when you need it. And since the rate is fixed, you won't have to worry about the volatility of floating interest rates. This will help you in determining the cost of producing a crop and will reduce your risk in the crop investment.

The Crop Builder Loan is available to all farmers who are eligible. You don't presently have to be an American Bank customer. To take advantage of this offer, contact Gene Richard or Bill Hughes in our Agri-business Department at (215) 375-5993.

Commitment to farmers. It's the American Bank advantage.

Good bankers. Good neighbors.

Smith profile

(Continued from Page A1)

agriculture and interested in better farming and livestock methods.

"He is a perfectionist and is very competitive. He instilled in young people the desire to do a little better. He was very people oriented and got along well with people. He knew what would work and what he was doing. As Max grew, respect for him grew."

Deppen, Smith's immediate superior, agreed that much of his success was due to his ability to work with people.

"He was people oriented and future oriented. He was such a great leader in his thinking and in his actions. He has been the right step ahead of the clientele and the leadership. He was a man with great deal of courage. Max demonstrated and he taught in a way that inspired goals. He had programs that were relevant."

Deppen added, Max made the first television show in the state. He saw a great many changes and he has been in the forefront of these changes.

About his youth work Deppen said, "He had a strong baby beef club program and these youth become adults. I have always felt there is a great flow between youth programs and adult programs and adult programs and youth programs. Max used this to its greatest advantage."

Lloyd Nolt, Mount Joy R3, agreed with the value of the youth connection. He said, "Max was very active in youth programs and when the youth grew up the friendship remains. His greatest contribution was his work with youth. Youth kept him young. It was his great interest and he inspired them."

A retired farmer and former Extension Board member, Nolt recalls, "Max followed Dutch Bucher who was a great man and it must have been difficult for him, but he was soon on his own and did

M.M. Smith

changes and has been responsible for a lot of changes. He was always open to new knowledge and new approaches."

Calling him the "Dean" of extension agents in the Commonwealth, King pointed out that Smith's expertise extended beyond Lancaster County. "He had influence beyond Lancaster County and was recognized nationally."

King said Max was greatly respected for his work with the Extension Committee on Organization and Policy, a national group. "He had a certain perspective here and was able to

respected him and his comments. He was like a teacher. You sit and you listen. I really respected him and I believe all children respect him."

Sarah said she believes it was his personality which helped him succeed. "He was a great leader. When you asked him a question you got an answer right a way. He told us to do the best job we can."

Sarah comments, "His memories of the beef and sheep clubs will always be with him. The beef and sheep club members were their (the Smiths') family. He was truly dedicated. He loved his work and was happy with it. We're surely going to miss him."

Jason Weaver, Robert Fulton Highway, Quarryville, echoes Sarah's remarks. The kids always respected him. He was precise and to the point. My children always said he was a demanding guy and they liked that. He got respect. He was dedicated and he made the kids feel obligated. He put the responsibility on them."

Now a 4-H leader, Weaver

(Turn to Page A33)

Meet Ruth Smith on page C-2

beautifully. Dutch and Max worked well together and I think Dutch taught him a lot.

Mrs. J. Robert Hess, 817 Waterfront Drive, was a former 4-H'er of Max's and served as secretary of the Farm and Home Foundation Board of Directors. She says, "I can remember when I first got into 4-H and how he was an ideal for 4-H'ers. He was professional and always set an excellent example. He taught you a good set of values and how to win and how to lose - and to do it gracefully. He was invaluable to the kids and inspired them with his mountain of knowledge."

Evelyn added, "I'm sure he'll be missed but he'll be able to be tapped for his knowledge. He was really looked up to."

Extension Director Thomas B. King credited Max's professional approach to his job with making him a success.

"His ideal was to help people to do a better job. He never took short cuts and was all for seeing that things got done correctly. That attitude makes him the individual he is. Before he ventured into new programs he gave a lot of thought to them. He had a full commitment to make them a success and he wanted his programs to succeed."

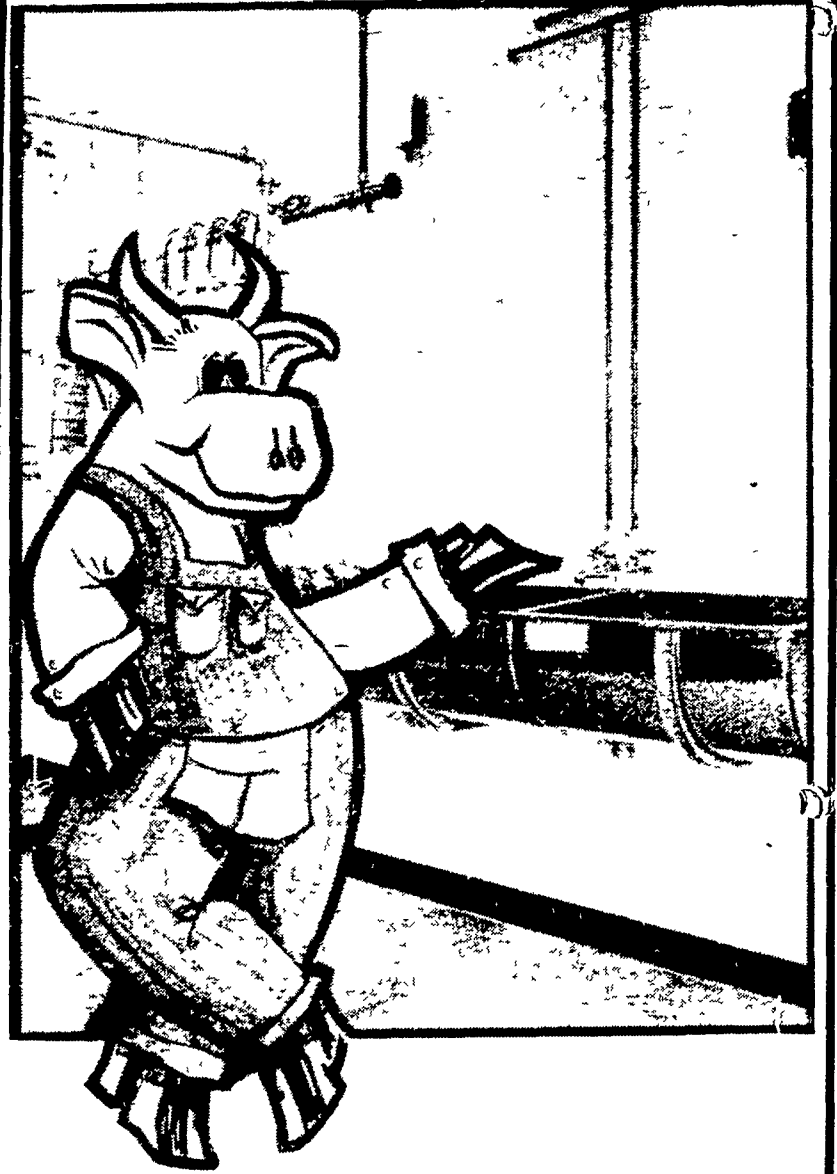

King, who worked with Smith originally as a livestock specialist, said, "Max was one who treated these youth not as kids but as individuals who had potential for developing and moving ahead. He treated each as an individual he was training for the future. He did a good job of training and they respected him for his sincere, business-like approach to his job."

In Smith's 44 years on the job King said, "Max has seen a lot of

contribute very beneficially to the program. He was much appreciated for his contributions."

Sarah Brubaker, 2418 Harrisburg Pike, Lancaster, just completed her final year in 4-H and served as president of the Red Rose Baby Beef 4-H Club.

She speaks for many 4-H'ers when she says, "When I first joined 4-H I looked up to him and

"Can't get your walls clean?"

Kemlite's GLASBORD® frp wall panel cleans up easy!

- Moistureproof
- Rustproof
- Dentproof
- U.S.D.A. accepted

Smith profile

(Continued from Page A32)

recalls, "I helped Max plant some of the first corn plots he planted and he was a leader even then. Max had a lot of drive and he helped parents as well as kids. He had a knack for getting along with people."

It was Smith's personal interest in youth which helped to create winners, according to Walter Dunlop of Walter M. Dunlop and Sons at the Lancaster Stockyards.

He said, "To begin with, he was a very dedicated person. He took a real personal interest in every 4-Her and taught them what to feed and what kind of steers to buy. It was his personality, his interest, and his knowledge of cattle that they looked up to."

In Dunlop's opinion, Smith also kept abreast of the times. He said, "Times have changed and they now look for lean cattle. He provided them with the kind of cattle that would win in Harrisburg. I was very much impressed with his work."

Tony Eberly, Denver R2, is now in partnership with his father and brother, but he spent eight years in the Baby Beef Club and expresses appreciation for what he learned from Smith. He states, "Max had so much enthusiasm. He had a way of giving it to youth and making

them strive for the best. He often told us 'you only get out of 4-H what you put into it.'"

Recognizing that he was involved in just a short part of Smith's long career, Eberly notes, "If he did for others what he did for me than I'm sure he did a lot of people a lot of good. He was always a man to look up to. I respected his opinion and I admired his love for youth and the time he spent with us."

Although he is now involved in poultry, Eberly, says, "When I started in 4-H he got me interested in livestock and I am really grateful for that. I went along with the team to the national livestock judging contest and I attribute our success to him."

Ray Brubaker was also a Baby Beef 4-H member for eight years and now works with Smith professionally in his capacity as County Executive Director of the Agriculture Stabilization and Conservation Service.

Brubaker says, "His work with youth was his greatest contribution. He had such an interest in them. He enjoyed working with young people and was concerned about their maturing and become mature adults. He created a stronger interest in agriculture for young people and I'm sure influenced me and created an interest in me for attending Penn State."

"He had an interest in his job and was very straight forward. He had established the confidence of farmers. When people think of a county agent they think of Max."

Mrs. Harold Fry, Stevens R1, was a 4-H leader for 39 years, almost rivaling Smith's tenure as county agent.

She recalls there was a different emphasis in 4-H in those earlier days, saying, "He came to every 4-H meeting, and corn was the big thing then. They were experimenting with hybrids and the topic was often crop rotation, cultivation and weed control."

Some things haven't changed however, as she continues, "Max wasn't a strict disciplinarian but he always meant business. He was a firm believer in letting the kids take over the business end of the meeting and learn parliamentary procedure. Whatever he told the kids was true. Then they succeeded and that built their confidence."

She feels his success in 4-H was built partially because adults thought so much of him that they insisted their children be in 4-H. When these 4-H'ers became parents their feelings were the same. She stated, "Parents and grandparents were supporting those kids in 4-H."

Dorothy believes he was well accepted because, "He can talk to almost anybody. Being a good

conservationist is a great asset because when you want someone to accept your ideas you talk with them and soon can instill your ideas."

His greatest contribution according to Dorothy is in his broad view. She says, "I think his interest in saving farmland and his teaching farmers to be husbandmen was most important."

Mrs. Harold R., Columbia R2, shares some feelings expressed earlier. She recalls, "Max was always interested in everybody. He made it appear that no question was too small. He never laughed at questions. He loved children and they seemed to want to do their best for him. If Max told them to do something, his work was law. He was so interested in each one; they wouldn't let him down and they worked hard for him. He got the best out of all those kids."

Grace inherited an interest in the Extension service from her father and she served as secretary of the

Extension Board and as a 4-H leader. She noted that Smith seemed to take the changes which occurred in extension programs in his stride.

"He adjusted to them as though he were in favor of them all along. He considered his work with young kids his most important work. I think he really liked it."

Another 4-H leader who had a close association with Smith was Fred Linton, Kirkwood Road, Quarryville. Linton was a Baby Beef Leader for 36 years so speaks with experience and authority when he says, "He was very good with the children. He was definitely well respected and everyone seemed to accept his programs."

About Smith's retirement, Linton, who is himself a retired farmer, says, "He'll enjoy it."

And that is a sentiment echoed by all those who respect, admire and will miss him as county agent.

Vet science project planned

NORRISTOWN — All teens interested in learning about veterinary science are invited to take the Vet Science Unit II 4-H Project to start on Wednesday, April 15, from 7:30-9 p.m. at the Montgomery County 4-H Center near Lansdale.

The shortcourse will continue every Wednesday evening up to and including May 27. Leading the project will be Dr. James Prier and Steve Prier of the Centre Square Veterinary Clinic. There's

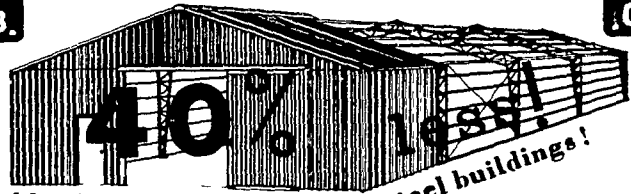

no cost for the course and materials will be provided.

Although the program is aimed at youth ages 13-19, anyone may attend. Teens do not have prior 4-H experience. For more details contact County Agent Nancy M. Kadwill at 277-0574. Advance registration is requested. Please leave your name, address, phone number and age when enrolling, or mail the above information to Kadwill at 400 Markley Street, Norristown, Pa. 19401.

Daubert's Wind Mill Farm tops in Brown Swiss

BY SHEILA MILLER

PINE GROVE - William R. Daubert, a dairy farmer from R2 Pine Grove, Schuylkill County, has come a long way from a farm boy who at age 13 was still milking his parents' solitary grade milk cow to the dairyman with the top Brown Swiss herd in the entire state.

Of course, Daubert doesn't claim to be the sole catalyst for his 85 milking herd's successful record of 15,341M, 3.9%, 605f. He gives a lot of credit to his sons and wife Rhoda (Spitler) who put in long hours getting the dairy operation where it is today.

Daubert, who was born and raised on the same 98 acre farm where his operation is run now, recalled how he and his folks started up in the dairying business in 1950 with five Brown Swiss cows. Then, when he and Rhoda were married in 1953, they bought sixteen Brown Swiss cows from his parents.

Over the years, Daubert and his family have built the top Brown Swiss herd in the state, through the use of superior A.I. sires and strict culling.

Helping out on the farm are four sons. From oldest to youngest, Dean, 24, is a recent dairy science graduate of Virginia Polytechnical Institute, married with a 2-year-old son, Dennis, 23, Schuylkill County's DHIA president, married two weeks ago, Ronald, 21, works part-time on the farm; and Allen, 14, a student at Pine Grove Area School.

What has paved the way for Daubert's road to success? According to Daubert, genetic improvement of his herd over the years is one of the important factors.

"We breed 95 percent of our cows and heifers artificially," he said, "using the top ten sires available. And, 75 percent of our cows are home bred - we keep all our heifers and raise out about six of our better bull calves."

One of the Wind Mill Farm's bulls, Marty L. Toro, is on lease to NOVA.

Another factor in the top Brown Swiss herd's success story is the feeding program.

"We feed a hotter ration than most farmers who don't believe in pushing their cows," commented Dean. "We don't feel pushing shortens up the productive life of a cow - the good ones will last until they're 10 or 12 years old even if they're pushed as young cows."

As evidence that feeding a hotter ration works, Dean pointed out, four of their 2-year-olds milked over 20,000 pounds last year. And 20 cows in the herd had records over the 20,000 pound mark.

"Four of our cows tested over 1000 pounds fat," he added. "Two

of the four were 2-year-olds. These were our first young cows to make that kind of mark since the farm's been in business."

The complete ration fed to the Daubert cows is a home-mix consisting of 15 pounds of alfalfa haylage, 10 pounds of shelled corn, 35 pounds of corn silage, 30 pounds of wet brewer's grains, plus 7 pounds of soybean meal, minerals, and sodium bicarbonate free choice.

The milking string, which Daubert pointed out has not been split into two groups yet, is fed as a group in the freestall barn, built in 1974. When the cows come into the stanchion barn for milking, they're fed free choice alfalfa, and additional grain is given to the high producers.

The original bank barn at Wind Mill Farm was outfitted with its first stainless steel pipeline last July. Prior to its installation all the milking was done with bucket milkers and a dumping station.

"It was a lot of milk to handle," chuckled Daubert, "but then we knew we had the right weights."

Another milestone for the Daubert operation came with the erection of their first upright silo for haylage in 1974.

"We doubled our herd size that year," Daubert recalled. The boys kept asking "Why sell the corn and turn around and pay more for ready-made feed?" - if you're going to grow the grain, you should feed it, too."

As a result, a second silo was put up in 1978 to store the farm's high moisture corn. And, just last summer, a third silo went up to hold the corn silage.

"Until last year, we used to put all our corn silage in a trench," explained Dean. "But we have dogs running around, and they'd punch holes in the cover as they'd race across it. Then we'd get spoilage."

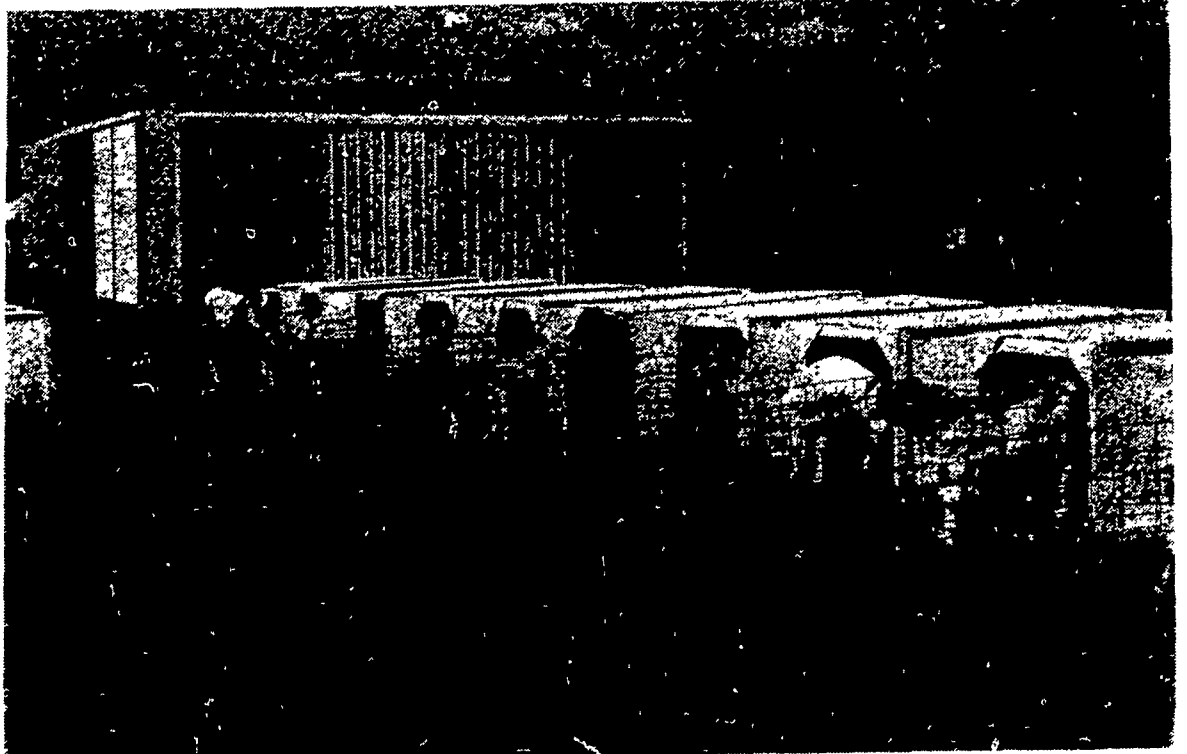

"When you have 20 tons of silage spoil out of the 50 tons you put in the trench, that's just too much waste," remarked Daubert.

The Dauberts are firm believers in the benefits of calf hutches, too. Since they began raising their calves outside a little over two years ago, Daubert claims he's cut the mortality rate of calves by 80 percent.

"The hutches definitely helped," he said. "We used to keep the calves in a concrete stable until we had so much trouble with scours our vet told us to make the switch to hutches immediately. Now the calves are out as soon as they're dry."

"We try not to let the calves nurse their dams - it makes training them to nipple buckets much easier."

The Dauberts start their calves

William and Rhoda look over their new crop of calves. Daubert says he feels making the change to raising his Brown Swiss babies in

calf hutches has made a difference, cutting the mortality rate by 80 percent.

Posing with their high-producing Brown Swiss cow in the state, Wind Mill Joann, are William and Rhoda Daubert, R2 Pine Grove left, and oldest son Dean. Classified VG 86,

Joann's record as a six-year-old earned her top billing on the state's DHIR listing. She is the dam of the top 2-year-old in the nation for fat production.

on whole milk for a week, and then feed them milk replacer. Daubert explained any "bad" milk is fed to the calves - it's never thrown out.

Once the heifers are a year old, they are turned out on pasture and fed as much hay and grain as they'll eat. The heifers are bred to calve at 24 months or less, with 25 percent being bred artificially.

"There's a great market for Brown Swiss, especially in the past five years," observed Daubert. "We could have sold 50 head in the past year, but we just didn't have that many to sell."

The colored breed's popularity, said Dean, stems from their docility, high milk production coupled with high protein and butterfat content.

Next week, the Dauberts are consigning a 3-year-old, Wind Mill Del Muff, to a sale in Ohio. Although not their top cow, Muff's record has put her on the honor roll - 365d 1-11 19,306m 3.5+ 671f. They also consign at the Pa. State Sale and the Maryland Calf Sale.

With a track record like the one established over the years by Wind Mill Farm, it's easy to see why collegiate dairy judging teams from Penn State, Delaware Valley College, and VPI stop over for a practice run on their way to Eastern States competition in the fall.

The farm has the high producing Brown Swiss cow in the state for 1980, Wind Mill Joann. Her 305 day record boasted 21,412 pounds milk

1% 4.1, and 982 pounds fat as a 6-year-old. Her final 367 day record stands at 26,827 pounds milk and 1111 fat.

Joann's sire, Roselawn Topsy Topper, is rated 400+. Her dam, Stan Swiss Brita (deceased) had a lifetime record of 114,079 pounds milk and 4684 pounds fat, with two lactations over 23,000 pounds.

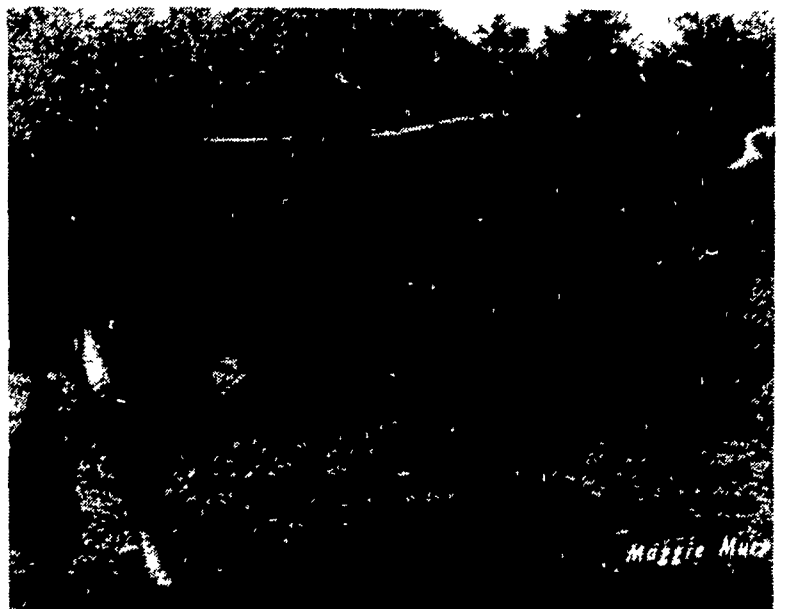

Two of Wind Mill's ladies were cover girls for the December, 1980 Brown Swiss Bulletin - one was Joann's daughter Wind Mill

Joan T. sired by Marty L. Toro. She was the national class leader as a senior 2-year-old for her 305 day fat record. She produced 21,412 pounds milk and 903 pounds fat, a 4.2 percent test. Her 359 day record boasted 24,148 pounds milk and 1040 fat.

Making Wind Mill Farm the first Brown Swiss breeder to have both the first and second placings for fat production nationwide was the record turned in by another senior (Turn to Page A35)

Wind Mill Joan T has attained national recognition in the Brown Swiss breed for her 2-year-old production record. She was the class leader in the 305 day fat honor roll, and was featured on the cover of the December, 1980 Brown Swiss Bulletin. Joan T is classified VG 89.

Ranking second in the national fat production record is Wind Mill Elegant Roz, classified VG 85, with a 2-year-old record: 305d, 18,930m 4.7% 898f.

Daubert's Wind Mill Farm

(Continued from Page A34)

2-year-old, Wind Mill Elegant Roz Her 305 day record came in the 18,930 pounds milk, f% 4.7, and 898 pounds fat, and her 362 day record

was 21,856 pounds milk and 1011 fat. (Roz had to step behind her stablemate, Joan T, for top billing one month after hitting the national magazine's cover.) Her

A.I sire is White Cloud Jason's Elegant, a superior sire.

The Dauberts have high expectations for a cow they purchased two years ago, named Vine Valley Patrick Hatty Sired by Vine Valley Loa Patrick, Hatty has one of, if not the leading production records for Brown Swiss in the state.

Her 305 day record as a 7-year-old was 25,959 pounds milk, f% 4.3, 1112 pounds fat, and her 365 day record showed 29,092 pounds milk, f% 4.3, 1253 pounds fat. She is understandably classified Excellent.

When the Dauberts take their cattle on the show road, they generally come home with top honors. At two consecutive Pennsylvania Farm Shows, they captured the grand champion, premier breeder, and premier exhibitor honors in 1978 and 1979.

In three decades and two generations, the William Daubert family has come a long way — all the way to the top of the Brown Swiss breed

This Wind Mill stablemate, Vine Valley Patrick Hatty, is setting out to make her mark in the state's top Brown Swiss herd. Although she has only called the Schuylkill County farm home for the past two years, Hatty is helping keep its name on the top of the heap with a 365 day record closing in on the 30,000 pound mark with over 1200 pounds fat.

Useful Centerpieces

The centerpieces on the tables at the banquet of the Grassland FFA Chapter on Friday, March 20, at the Blue Ball Fire Hall came in handy to help pass the time in the interval between the meal and the start of the awards program. Instead of flowers or the like, the centerpieces were farm machinery toys representing various John Deere equipment, ranging from tractors of all sizes to baler and front-end loaders. Quite a few blue-jacketed youths were seen hooking the equipment together, pushing it across a table and even building make-believe barns out of the banquet programs.

Hallowell says checkoff on hold

CENTERVILLE — During a session with the Atlantic Breeders Cooperative on Wednesday afternoon, Pennsylvania Secretary of Agriculture Penrose Hallowell stated the milk promotion referendum "is on hold."

He commented that four drafts of the proposed checkoff of three-quarters of one percent from farmers' milk checks have been reviewed to date. The money collected through this program would be used for research and promotion of dairy products.

Hallowell explained the reason the referendum is on hold is because the Federal Order threatened to cease its program if Pennsylvania starts one of its own. "If that's the case, we'd lose more money than we'd gain," Hallowell said.

He added he recently visited representatives of the Federal Milk Order to persuade them to allow Pennsylvania to establish a checkoff in addition to the federal program.—SM

Why Buy SEALSTOR?

Roomier, cooler, dome-shaped Sealstor roof is strong, lightweight, translucent, fiberglass. Roof panels are larger in order to reduce seam lines and the possibility of leakage

Sealstor forage distributor packs feed with approximately 15% greater density. You get more capacity without paying for a larger structure

Glass-fused-to-steel sheets are the industry's largest. Larger sheets combined with closer bolt spacing, provide maximum protection against feed spoilage

Unloader is massive sweep arm auger. No chains to break, no short arming. Compared to chain type unloaders, service savings may exceed \$1,000 per year. The unloaders offered by Sealstor are rugged, dependable, easy to maintain and service

Recessed steps are molded into a roof panel. Not added on. You get built in solidity at the top of a Sealstor structure

Breather system is up high in the roomy dome. It's easy to see, check and service and it doesn't take up valuable feed storage space

Special, smooth, nylon-capped bolts inside the structure close bolt holes tightly and permit the even flow of feed down the structure walls

The greater density of feed inside a Sealstor is only possible because the bottom unloader is engineered to handle the extra workload

The longer, stronger Sealstor Warranty.

Sealstor Warranty

Southwestern Porcelain, Inc. covers every Sealstor structure for two full years (complete details upon request)

Sealstory

The manufacturer of Sealstor structures Southwestern Porcelain Inc. has been making glass fused to steel products since 1948

Products turned out by our large modern plant near Tulsa, Oklahoma have been used to build complete service stations and high rise buildings as well as thousands of top loading, bottom unloading, oxygen limiting feed storage and processing systems for forage and grain crops and above ground liquid manure structures in a wide range of sizes

Just as the Sealstor factory and engineering staff is dedicated to providing the modern livestock feeder with the soundest structures and the most advanced features, so is your independent Sealstor dealer dedicated to the superior service and assistance that has made the remarkable acceptance of Sealstor products a reality. We hope you will let us send you additional information about our products and permit us to arrange for you to visit Sealstor farms in your area

Seeing is believing! Call Us For Details On New York State Dairy Tour, April 1st & 2nd

Safety winners

(Continued from Page A1)

Programs at their dealership emphasized baler and forage harvester safety and rescue procedures.

Reagan has conducted the 4-H Tractor Club Program in Franklin County for the past 25 years.

In that time he has reached over 1200 4-H members with the message about safe equipment operation.

Safety aspects of the program include projects, lessons, safety films, slide presentations and demonstrations.

The award noted Reagan's program fills a need for a predominately farm-oriented group. Over the years many testimonials have been given by parents, leaders, and members supporting the effectiveness of the program.

The FFA members of Admiral Peary AVTS, Ebensburg, were cited for their outstanding job with the fall harvest safety program.

Members distributed several thousand safety stickers to be placed near the moving parts of assorted farm machinery.

Effectiveness of all of these programs can be seen because 1980 was the first year since 1977 that there have been no reported deaths caused by farm equipment accidents.

In other business, the Ag Safety Council approved new articles of incorporation which make it legal for the Executive Secretary to fill a major role in the organization's work.

Current Executive Secretary is

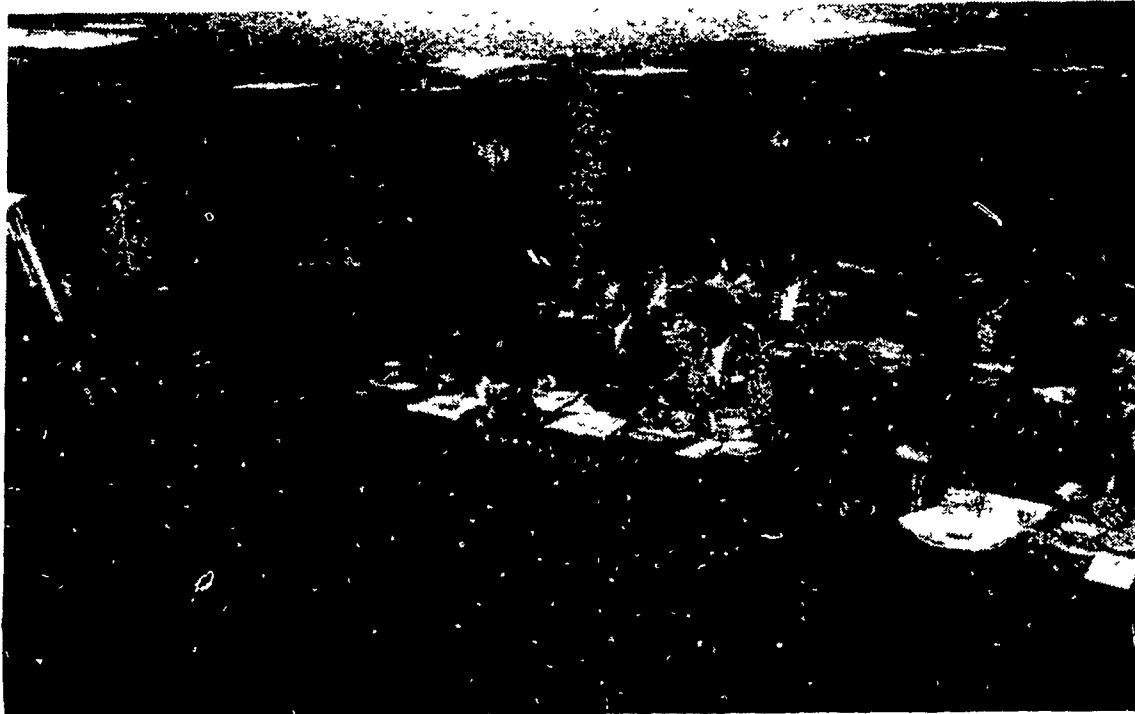

Penn State Ag Engineer and Safety Specialist Dennis Murphy.

Four members were elected to the board of directors.

They include Linda Boyer, Pennsylvania State Grange; Bill Logan, Pennsylvania Rural Electric Association; Don Mincemoyer, Penn State Ag Education; and Shirley Garner, Lancaster County farm wife and safety award winner.

The day-long meeting included a number of speakers who covered such wide-ranging topics as home electrical safety, woodstove construction, alcohol fuel safety, and accident victim rescue.

Any farmer or organization interested in farm safety was invited to join the Council. Dues are \$5 per year for individuals, \$25 for companies. Dues can be sent to the Council, 204 Ag Engineering Building, University Park, PA 16802.

Walter Johnson, far left, told members at the Pa. Ag Safety Council's 4th Annual Meeting Thursday how to keep wood burning

stoves from burning other things - like homes or farm shops.

New directors of the Pa. Ag Safety Council include, from left: Linda Boyer, State Grange; Don Mincemoyer, Penn State Ag Education Dept.; and Shirley Garner, Mount Joy farmwife. Not present was Bill Logan, Pa. Rural Electric Assn.

Bryan Nischalke, right, of Vintondale, accepts first place award on behalf of Admiral Peary FFA Chapter for participation in the fall harvest safety program. Giving the award is Penn State's Don Mincemoyer. The Ebensburg FFA chapter finished first among 34 chapters, some of which are listed on display in background.

Yorkshire sale averages \$308

LEBANON — Thirty-eight lots averaging \$308 went through the auction ring at the Pennsylvania Yorkshire Invitational Show and Sale Saturday at the Lebanon Fair Grounds.

Total of the sale was \$11,700. Harry Bachman was auctioneer.

The champion bred gilt, exhibited by Leon Arnold, Lebanon, was sold for \$620 to John Shaffer, of Dalmatia.

The reserve champion bred gilt, exhibited by Ehmer Farms, N.Y., was purchased by Lazarus and Sons, of Whitehall, for \$325.

Fifteen head of bred gilts averaged \$330.

The champion single open gilt, exhibited by Thomas Arnold, Lebanon, sold for \$400 and the reserve champion, exhibited by Tim Heagy, Lebanon, brought

\$420. Both were purchased by Raymond Townsend, Frankford, Del.

Eight single open gilts averaged \$234.

The champion litter-mate pair of open gilts, exhibited by Elwood Houser, of Lebanon, was purchased for \$360 by William Buckman, of Sellersville. The reserve champion pair, shown by Ehmer Farms, was purchased for \$360 by Lazarus and Sons.

Eight litter-mate pairs averaged \$334.

The champion boar, exhibited by

Joel Stern, of Red Run, was bought by Leon Arnold, of Lebanon, for \$450. The reserve champion boar, exhibited by Lazarus and Sons, was bought by Harry Kreider, Quarryville for \$325.

Seven boars averaged \$314. Twenty-one bidders were present.

Poultry industry readies for huge banquet

LANCASTER — The Host Farm Resort in Lancaster, the largest convention facility in Southeastern Pennsylvania, will be filled to the brim on the night of April 23. The occasion is the Annual Fund Raising Banquet of the Pennsylvania Poultry Federation.

Over 1,800 Pennsylvania poultrymen as well as guests from across the United States will gather for the most festive agricultural banquet in the Northeast.

The Lancaster County Poultry Association table will include Heidi Miller, Lancaster County Poultry Queen; J. LeRoy Esbenshade, president of Lancaster County Poultry Association; and Jay Irwin, Lancaster County Agent.

The guest list to this affair reads like a Who's Who in the poultry industry and finds farmers, corporate executives and allied industry men together sharing what has become the biggest poultry event in the entire Northeast.

The highlight of the evening is a professional show featuring top-name performers. This year's entertainment includes the famous Four Aces singing group, the

Scenes from last year's Poultry Federation banquet feature banquet rooms filled to capacity, corsages for the ladies, and dinner served at individual tables. This year's annual fund raiser promises to be of equal caliber.

versatile Sunshine Express, popular for their country, rock, popular and gospel renditions and a surprise comedy interval.

Tickets to the affair sell for \$75.00 with a discount ticket

(\$65.00) available only to poultry farmers who are members of the Pennsylvania Poultry Federation. Proceeds after costs finance the state association in its work on behalf of the poultry industry in Pennsylvania.

Co-Chairmen of the event, Bob Graybill, Pennfield Corporation, Jay Greider, Greider Farms, Inc., and Dale M. Weaver, Victor F. Weaver, Inc., report that sales are ahead of last year and the goal of 1,800 tickets to be sold should be reached.

For further information or to purchase tickets write to Pennsylvania Poultry Federation, 500 North Progress Ave., Harrisburg, PA 17109 or call that office at 717-652-7530.

PRV survey

(Continued from Page A1)

PRV — we want to know if the disease is in the herd."

If pseudorabies is identified in a swine herd, the herd will be placed under quarantine. The hogs will be permitted to be sold for slaughter. And in the case of feeder pigs, they can be fed to market weight at a quarantined feedlot, remarked the BAI chief.

In an effort to assuage the fears of the hog producers concerning the potential of the BAI staff bringing the disease to the farm during the survey, Van Buskirk assured them the veterinarians and livestock disease control technicians will meticulously clean their equipment and garb before stepping foot on a hog farm.

"We'll be using sterile needles, wearing fresh coveralls, and properly caring for our boots," he said. "The danger of our carrying the disease to your farm is nil."

He warned, however, if no lid is put on the disease now, through efforts such as the survey, it's only a matter of time until all the farms in the area contract the disease.

Van Buskirk requested farmers who have hog snares supply them to the survey team. However, he said, if the farm does not have this equipment available, BAI will supply it. After each farm it will be double disinfected, he reassured.

The results of the blood tests will be available, under the best cir-

cumstances, in one week, stated Van Buskirk. But, he said he could foresee samples backing up in the laboratory for several weeks due to staff limitations. In that case, the samples will be frozen.

Until the farmer gets the results back on the blood tests, the herd is, for all purposes, under quarantine and cannot be sold. If the hogs absolutely must be moved or grave economic repercussions will result to the farmer, Van Buskirk said the hogs could be marketed on a permit basis.

"If a farmer doesn't agree to let PDA test the hogs during the April survey, the farm will be posted officially quarantined," said Van Buskirk. "Our teams will literally go to every farm to see if hogs are being raised. Of course we must rely on the farmer's honesty."

He pointed out that if time does not allow the survey team to reach a farm in the area by the end of April, the farm will not be quarantined. "We want to work with the farmers," he said.

The quarantine will apply only to hogs if the other livestock appears healthy, he noted.

Blood test results, which will include a brucellosis check, will be handled out of Dr. Cable's office in Harrisburg.

For hog farmers with smaller sized herds (less than 20), the veterinarian stated, it may be possible to bleed all the hogs. This

information could be used by the farmer to help qualify and validate his herd as brucellosis and pseudorabies-free.

If a hog farmer in the designated area prefers to have his own veterinarian perform the survey, said Van Buskirk, it could be permissible. He explained BAI will pay the vet according to a predetermined fee schedule. This arrangement will have to be confirmed between the local vet and Dr. Cable prior to the testing, he pointed out.

Van Buskirk informed the hog producers the survey team will be in touch with farmers before coming in to do the testing.

"Someone will stop in ahead of time and check what is the best time for the bleeding team to come out," he said. "Of course, there will have to be some compromises in order to get the survey done as expeditiously as possible. The more help the farmer can give, the faster the bleeding will get done."

For those farmers who are located just outside the survey area who would like to have their herds tested by the BAI teams, Van Buskirk advised contacting the office in Harrisburg to work out arrangements.

If, from the survey results, the Bureau decides to recommend eradication, there will have to be more controls on importing hogs so the disease isn't brought in again, Van Buskirk observed. How this control will be accomplished, especially for the mushroom effect of feeder pigs trucked in from

several locations and sold at different auctions, Van Buskirk said he did not know.

Representative Noah Wenger, who attended the session, remarked it would not be easy getting funds to reimburse hog farmers for breeding herds that may have to be depopulated.

"It's more difficult to get indemnity funds when the disease is not a hazard to human health," he said. "We'll have to wait for the survey to identify the extent of the problem and then go with BAI's

recommendations."

Van Buskirk added, "The eradication program will cost farmers money, but our responsibility is to help farmers get rid of the disease."

Wenger concluded the session by stating, "Your alternatives are not all that attractive. I'm not sure which way a producer will lose the most. With your slim profit margin — if there is any profit in the hog industry today — can you afford to live with a disease that cuts into your reproductive efficiency?"

Farmers attending Thursday's question/answer meeting on the April pseudorabies survey study the map outlining 50 square miles of Lancaster County slated for bleeding. Basically the outside boundaries follow Route 23 from Goodville to Leola, north on 772 and 272 to Ephrata, continuing north

to Schoeneck, then east to Bowmansville. For more information on the exact parameters of the survey area, contact Dr. John Cable, BAI veterinarian, at 717/783-5301, or write Bureau of Animal Industries, 2301 Cameron Street, Harrisburg, PA 17120.

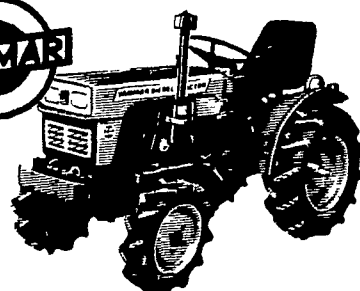

Representative Noah Wenger, right, joined the group of farmers, teachers, veterinarians, and Extension staff to discuss the need to get the facts on pseudorabies in Lancaster County and the chances of cleaning up the disease.

Sharing ideas with Wenger are, from left, Lancaster County Extension agent Glenn Shirk, Eastern Lancaster Co. School's vo-ag teacher Bob Anderson; and BAI chief veterinarian Dr. Max Van Buskirk.

WHY BUY YANMAR ?

HERE ARE
7 REASONS
THE COMPETITORS
WISH THEY
HAD...

- 1 YANMAR - The only compact diesel with industrial wet sleeve engine
- 2 YANMAR - The only compact diesel in which all models have front wheel gear drive instead of universal joint. Benefit: Shorter turning
- 3 YANMAR - The compact diesel with all models having cast iron rear end housing
- 4 YANMAR - The only compact diesel that does not need GLO plug to start engine
- 5 YANMAR - The only compact diesel with choice of automatic shift (no power loss on automatic) or manual shift.
- 6 YANMAR - Nebraska tests rated the 24 HP diesel best for fuel efficiency
- 7 YANMAR COMPANY is the world's largest small diesel engine manufacturer

Letters To The Editor

(Continued from Page A12)

good employers. And respect, appreciation and even friendship. How? By treating us as equals — not on the financial scale and not as your closest buddies — but as PEOPLE, skilled; intelligent, human people.

Finances are, of course, important. We too have heat, electric and insurance bills. Our groceries and clothing costs rise with everyone else's. (And yes, I do garden, freeze & can, sew, etc.) But we're not in this for the money.

We don't expect to make millions or to live in palaces... a fair honest wage (%s don't usually work for either), a decent home (be it mobile home, house, or apartment) and personal respect. That we do expect and work for — just like you.

"Privileges" is a word we

hesitate over. Generally speaking benefits are something we earn, not gifts given. If you do something extra we thank you for your thoughtfulness and will probably do it with more than words. And we hope for the same in return — a simple comment "nice job" or "you can weld, too? terrific" is worth a lot.

Presumably "innocent until proven guilty" does not apply to farm workers. If we happen to follow an unhappy employer — employee relationship, that's unfortunate. But give us a chance. After all we're taking a chance, too.

If you have a complaint, speak up. If you'd prefer a job done a specific way, say so. At the same time hear us, too. And please, don't promise something you have no intention or way of giving.

Chances are we're farming by choice. (obviously our first choice would be our own dairy. It sounds simple)

So, we're "into" farming. We know about long hours, broken equipment, sick animals, high

prices, rainy and dry seasons, etc., etc. We do sympathize and we work hard to pull our weight and more. We're anxious to learn, to work, to earn our way but maybe, just maybe, we know something you could learn, too.

And we do have families and other interests. Our kids have birthdays, our wives give birth just like yours. We are more than willing to trade our times for honest needs we care.

We're lucky now — we've found honest, decent employers. We believe they feel that of us. So to them and the many others: Thanks. I guess simply the most important thing is "Do unto others as you would have them do unto you".

And isn't that what it's all about?
**A Hired Man's Wife
Royersford**

Dear Editor:

We would like to express our sincere appreciation to Sheila Miller for the time and effort she spent preparing the Sheila's Shorts in our behalf in the Feb. 28th issue. It certainly has provided us with some very useful knowledge.

You may be interested to know,

ours is not a negotiable distribution line. It is a cross country transmission line we're dealing with. But I think our residence just may be within 300 feet of it. So we're very anxious to get out with our

tape measure to see.

Again many, many, thanks to you for your kindness.

**Mr. & Mrs. Leroy Bachman

Farm bill

(Continued from Page A1)

CCC storage loans will be cut, reflecting confidence the grain surplus will be cut.

But a number of farm spokesmen privately echoed the bewilderment of a Washington observer who admitted he was "a little befuddled" about the outcome of any Farm Bill.

It's difficult to talk now about a four-year bill when farmers don't yet know if there will be a new grain agreement with the Soviets, if the current grain embargo will end, or what kind of the dairy program modifications finally will come out of Congress, he said.

Most observers seemed to agree with John Hoseman, chief economist for American Farm Bureau Federation who said farmers had to be willing to take cuts to reduce the general inflation.

"The dairy cuts are more politically symbolic than economically significant in the overall economy," Hoseman said.

But to date, one program seems destined to survive: the Southern tobacco program, at present, is not earmarked for any cutbacks.

The peanut program — in the wake of the defeat of the nation's number one peanut farmer — may be phased out over the next few years.

Hoseman said he worries that continued general inflation could blow up any farm program.

Some loan rate increase is almost certain in the feed grain and wheat programs.

But Farm Bureau said it wants to make sure any increase is in line with market realities. Otherwise, Farm Bureau fears the government could end up in the grain business if U.S. growers have good crops back-to-back.

"We want it to be an orderly marketing tool, not a price manipulating tool," Hoseman said.

With the elimination of the April milk price support increase some groups looked for a tit-for-tat to lighten the dairymen's burdens.

The National Grange had supported a casein amendment but the measure found tough sledding in committee.

Although no definite date was set for Secretary Block to make the formal presentation to the House and Senate, it appears likely the resolution of S-509 and the dairy support question will allow him to go to the Hill with his farm program sometime this coming week.

BEST TIME.

NOW!

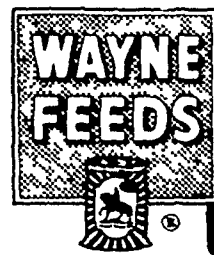

Wayne® Calf Program.

Top heifer calves in 4 months!

The Wayne Calf Program is designed to condition a dairy calf for breeding at a younger age. After four days of colostrum, it starts with Wayne Calfnip®, a medicated milk replacer costing about half the value of whole milk, and Wayne Calf Krunch®, a complete feed. You may also use Dairy Calf Grower Pellets®, Calf Supplement®, Sweet Bulky®, and Wayne Calf Health Aids.

We'll help you with a program that will get your calves to recommended body weight, economically, at four months so you can look forward to higher quality herd-replacement heifers. See us about the Wayne Calf Program.

Penn State gets new extension agronomist

UNIVERSITY PARK — Douglas B. Beegle has been named to Penn State's College of Agriculture faculty as an extension agronomist, effective March 1.

Thomas B. King, Penn State associate dean for extension, points out that he is responsible for soil fertility programs, primarily those duties previously carried out by Wayne Hinsh who served as extension agronomist prior to his appointment as assistant dean in the College of Agriculture.

A native of Roaring Springs, Beegle received a bachelor of arts degree in chemistry from Lycoming College in 1974. He earned a master of science degree in soil chemistry and is completing requirements for a doctor of philosophy degree, both at Penn State.

Prior to his appointment to the extension staff he was a research and graduate assistant in the Penn State Department of Agronomy and was a dairy farmer for three years.

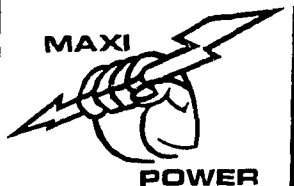

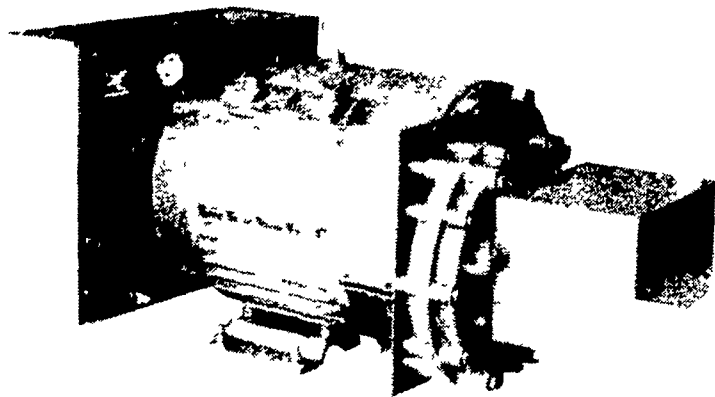

Beegle is a member of the

Douglas Beegle

American Society of Agronomy and Soil Science Society of America.

He is married to the former Glenda Ann Buell, a registered nurse. They are the parents of a daughter.

Northampton presents ag awards

BY VIVIAN PAUL
Staff Correspondent

WIND GAP — Nine Northampton county residents were honored by the county's three agriculture services, the Cooperative Extension Service, the Conservation District, and the Agricultural Stabilization and Conservation Service at the combined annual dinner meeting last week.

Mrs. James Kilgore of Nazareth, was cited for her 30 years of extension service including 23 years as a 4-H leader.

The county's agricultural award was given to Robert H. Jones of Bath. Jones served 12 years on the extension board and has been active in many county agricultural organizations.

Orchardist Warren Shoemaker of Mt Bethel received a certificate

for servicing six years on the executive committee.

The extension awards were presented by Dr. W. Harry Schaffer, assistant Director of the Cooperative Extension Service.

John Linde Jr., manager of Northampton Farm Bureau, and Harold Fabian of Bethlehem received the Friends of 4-H awards.

The Conservation District presented its education award to B.H. Cole and its conservation farmer award to Paul Richards.

ASCS length of service awards were given to Clarence Fehnel and Robert Jones.

Clifford Jones, secretary of the Department of Environmental Resources was guest speaker.

Jones announced the allocation of \$163,000 in state funds for the construction of facilities at the

Jacobsburg State Park located off Route 33 between Wind Gap and Easton. The money will be used for the construction of an amphitheater, rehabilitation and preservation of the Benade house, construction of a pedestrian, bride and construction of a group camping facility.

Beat the Heat with Eggs

Dairylea names vice president

PEARL RIVER, N.Y. — Richard G. Houston has been appointed Vice President for Administration at Dairylea Cooperative, Pearl River, NY. The announcement was made by Edgar T. Mertz, chief executive officer of Dairylea.

Before joining Dairylea, the Northeast's largest marketer of milk and milk products, Houston held a senior management position at Philadelphia Quartz Corporation.

Previously he had been vice president of purchasing at H J Heinz Co and earlier, Director of West Coast Distribution for Proctor and Gamble.

At Dairylea, Houston will initially be responsible for purchasing, transportation, industrial relations and loss control functions, Mertz said.

Houston holds a BSIM degree from the University of California.

DIAMOND CAGE SYSTEMS

THE SPACE SAVER - 4 HIGH STACKED The Best Equipment For Converting Old Poultry Houses To Maximum Density

Thinking about making better use of your old poultry houses? Here's the answer.

With Diamond's 4 High Stacked Layer Cage System you can increase the bird density of an old stair step cage house from 30,000 birds to 108,000. And that's without adding a single square foot of floor space. The system 811 is just 73" high and 60" wide.

If ceiling height permits, you can increase bird density even more, up to 135,000 birds with the 5 High System 812 or 162,000 birds with the 6 High System 813.

With new construction you reduce your overall investment per bird by putting more birds in a building and utilizing the otherwise wasted vertical space.

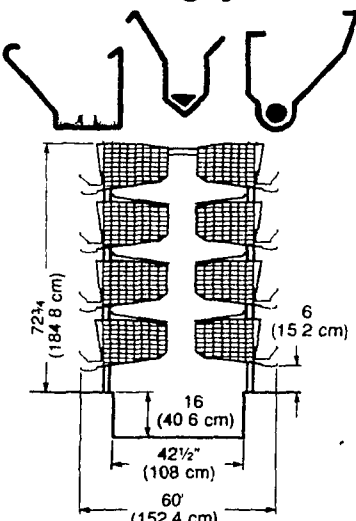

House Capacity, 4 High Stacked

4 Rows - 200' - 28,800 Birds
4 Rows - 300' - 43,200 Birds
6 Rows - 400' - 86,400 Birds

The Diamond Stacked Layer Cage System is available with your choice of three feeding systems: the Flat Chain, F-80 Deep V or Link Chain. And three watering systems: troughs, cups or nipples. Doors are located on front of all cages. Installation is fast and easy.

Three feeding systems

Manure is deposited on rust proof fiber glass manure chutes under each tier of cages and removed automatically by a Diamond manure removal system proven over 12 years.

Eggs are collected automatically by a special high capacity system designed for the Stacked System. Plastic or woven fabric belts are available. Let Diamond take you higher than anyone else in the business with the new Stacked Layer Cage System.

Super High House Density Means Lower Investment Per Bird.

For producers who want the maximum house density in new facilities or converted buildings, Diamond has developed the Stacked Layer Cage System. This new system is available for deep pit houses and houses with pit scrapers or flat concrete slab.

Sunflower has it!

... the H2 and 3-Section Offset Disc

Flexibility is the key word because these totally flexible discs offer flexibility in rough or terraced terrain without gouging or buckling. Precision, pre-set gang angle on the Model H insures a straight pulling disc because the gang cutting angle is always in the proper relationship to the pull point (the hitch). Also, because of the pre-set gangs, set-up time has been cut to a bare minimum.

Some of the features offered on the Model H are: heavy duty 4" square tubular steel frame, heavy duty lifting mechanism, wheel adjustments, exclusive adjustable tongue, greasable sleeves at hinge joints for longer life, machined spools and high-quality disc blades. However, you look at it from an engineer's point of view or from your point of view, you just can't beat the quality of manu-

facturing of dependability or the Sunflower Model H2 and 3-Section Flexible Offset Disc. Available in sizes 12, 14, 16, 18, & 20 ft. See your Sunflower dealer, he'll show you that the Model H2 and 3-Section Disc has a size to fit your needs.

Tackle the toughest haying conditions and come out on top with a 9¼-foot cut 1209

Here's a mower/conditioner that's ideal when your crop and field conditions aren't. The 1209 is fearless in the field because it's built strong to handle thick hay stands — yet nimble enough to float over rough terrain.

JOHN DEERE 1209 MOWER/CONDITIONER \$5843⁰⁰

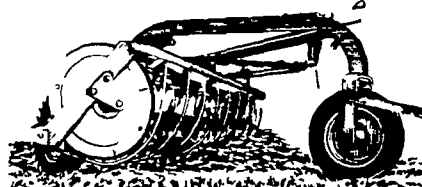

JOHN DEERE 336 BALER \$4876⁰⁰

JOHN DEERE 346 BALER \$6378⁰⁰

JOHN DEERE 30 BALE EJECTOR \$1575⁰⁰

There's an 8½-foot 660 Rake here... set up just for you

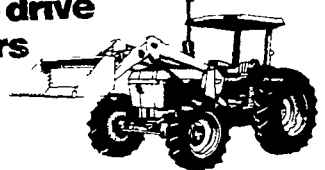

Rake all the hay laid down by a 9 foot mower or 9 foot mower conditioner. And do a good job of it with a 660 Rake. You get five bars and rubber ball joint teeth are standard.

660 RAKE w/HITCH AND JACK \$1756⁰⁰

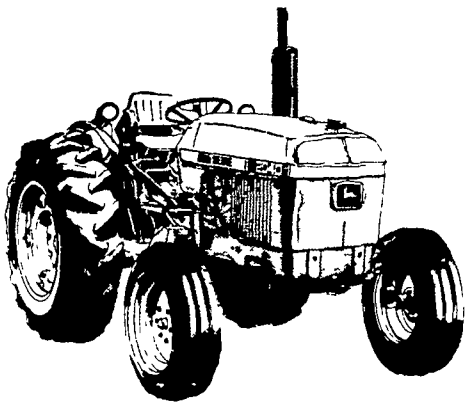

660 RAKE w/FRONT GAUGE WHEEL \$1795⁰⁰

John Deere 143 Loader — it can work with front-wheel-drive tractors

Ready and waiting! The veteran 143 Loader is ideally suited for the John Deere 40 and 50 hp Tractors with mechanical front wheel drive.

143 LOADER with 72" Materials Bucket \$1718⁰⁰

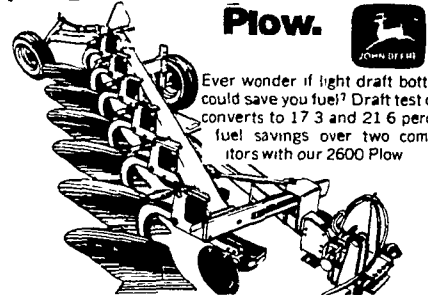

JOHN DEERE 2040 TRACTOR 40 H.P. \$10,725⁰⁰

JOHN DEERE

HEADQUARTERS FOR ALL YOUR FARM EQUIPMENT NEEDS

Tough soils? Ease your plowing with a light-draft John Deere Plow.

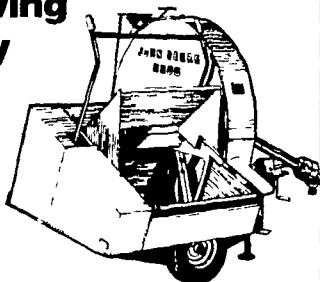

Ever wonder if light draft bottoms could save you fuel? Draft test data converts to 17.3 and 21.6 percent fuel savings over two competitors with our 2600 Plow.

Model 2600 — 4 Bottom 18" — Spring Reset — \$6059

Model 2800 — 4 Bottom 18" — Spring Reset — \$7190⁰⁰

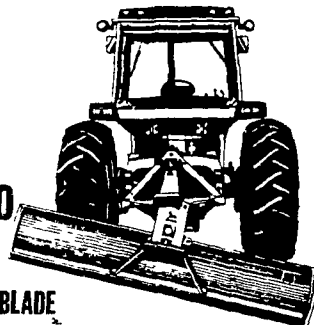

Big blowing capacity for your tall silos

Send a geyser of silage to the top of 80 foot silos with the 6500 Blower. We know you need a high capacity blower during peak storage times — so we gave the 6500 a big 57-inch-diameter fan for extra blowing power.

6500 FORAGE BLOWER \$2016⁰⁰

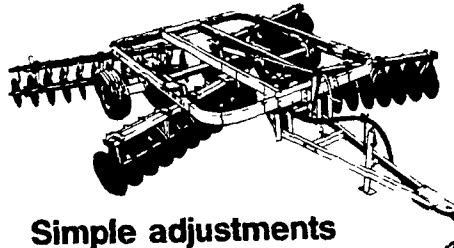

How many jobs could you handle with a rear blade?

MODEL 78 REAR BLADES 7 FT. \$363⁰⁰

MODEL 88 REAR BLADE 8 FT. \$712⁰⁰

215 Level-Action™ Disks

Simple adjustments and tough bearings make these disks "simply tough"

MODEL 215 11'5" DEMO \$3830⁰⁰

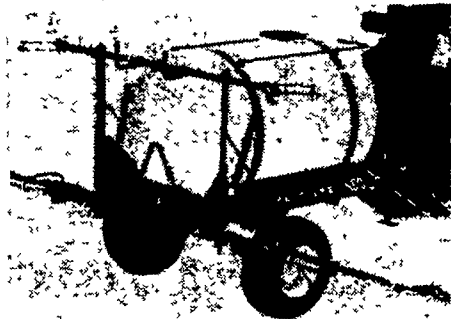

Meet your spring plowing needs with a 1610 Chisel Plow... in stock now

Twisted shovels rip moisture absorbing grooves and blend in a soil-saving mulch to reduce runoff and resist wind.

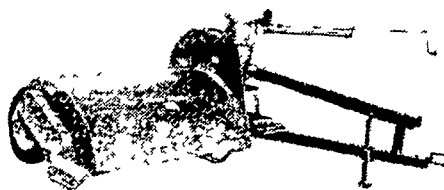

MODEL 1610 8 FT. 8 SPRING TRIP STANDARDS \$1717⁰⁰

550 TRAILER SPRAYER

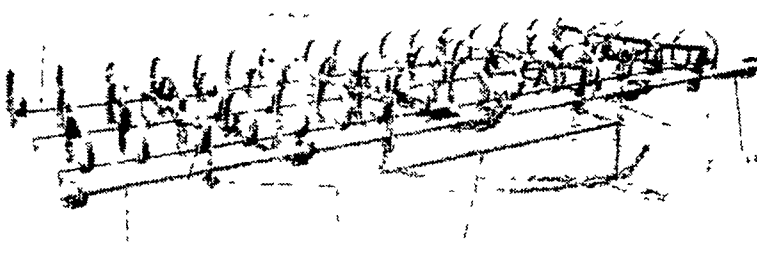

JOHN DEERE 550 TRAILER SPRAYER
500 gallon tank - Centrifugal pump

on Genuine IH Plow Parts

This is where the savings are! It's our big Price Plowdown Sale. We've rolled back prices on plow parts. You'll find everything you need: upset shares, deep suck shares, flat shares, trash plates, colter blades, shins, and landsides. All high quality, and that means the best high-carbon steel, and the best heat-treating for top performance. Best of all, at 25% off regular IH suggested list prices.

Stock up now...at the lowest prices of the year.

TORQUE AMPLIFIER, CLUTCH & TRANSMISSION PARTS & SERVICE

We have expanded our line of renewed clutch disks & pressure plates and now have available guaranteed quality clutch parts for the following companies:

Allis Chalmers	Ford	White	Leyland
Massey Ferguson	John Deere	MM	Int Harvester
Case	Oliver	Cockshutt	Steiger
Deutz	Uni-System		

Wholesale inquiries invited. We will be stocking many but not all of the clutch parts we have available. Allow 3 to 4 days for non-stock items.

Rebuilt TA assemblies in stock for IH tractors, New and Rebuilt, Water Pumps, Dynalife clutches, pressure plates and PTO drive shafts (are spline fitted into pressure plate, IN STOCK for tractors A, B, C through 1586 also for most models of IH combines. IH dealer inquiries invited on our parts & prices!

Complete TA assemblies for 706-1586 are priced at \$550 and come with a Dana Co. Heavy Duty Sprag instead of the usual IH sprag. The Dana sprag is guaranteed for 2 yrs. against failure. Sprag kits (includes sprag gear, Dana sprag & piston carrier) and all items for rebuilding your own TA assembly are available to qualified persons. Ramps are carriers for older style TA's (as in SMTA 340-560) are priced at \$150 each and carry a 90 day guarantee. We have parts needed for TA repair in stock at prices which will save you money. Shop is available for complete TA installation or split the tractor yourself and send the center housing to us. Shop is also available for other major tractor repairs.

To help us in scheduling our shop work, appointments are requested for housing repair and major parts orders.

Parts shipped direct thru UPS & Parcel Post at
No Extra Charge To Retail Customers

Krause Rock-Flex™ Disc

AN INVESTMENT
THAT PAYS
BIG
DIVIDENDS

PERFORMS!

FLEXIBLE BEARING ARMS

Rugged steel C-shaped bearing arms provide the strength to assure good penetration yet allow flexibility for the disc gangs to ride over obstructions. This helps prevent damage to the gang assembly and frame members.

GANG MOUNTED SCRAPERS

The rugged paddle-type scrapers are mounted to the bearing hangers so they move with the disc gang. This keeps the scraper next to the blade at all times.

HEAVY GAUGE BLADES

High carbon 24" x 1/4" disc blades are standard equipment. These thick heavy blades will provide the strength required when striking obstacles in the field. Extra heavy-duty spools are also used on all rock-flex models.

AVAILABLE IN SIZES FROM 12 TO 45 FT.
AND FROM 100 TO 300 LBS. PER BLADE.

1 1/2" OR 1 3/4" COLD ROLLED ARBOR
BOLTS WITH NUTS ON BOTH ENDS.

SPRING SPECIAL: ► ALL KRAUSE DISCS From 12 to 18 Ft. At 1980 PRICES!!

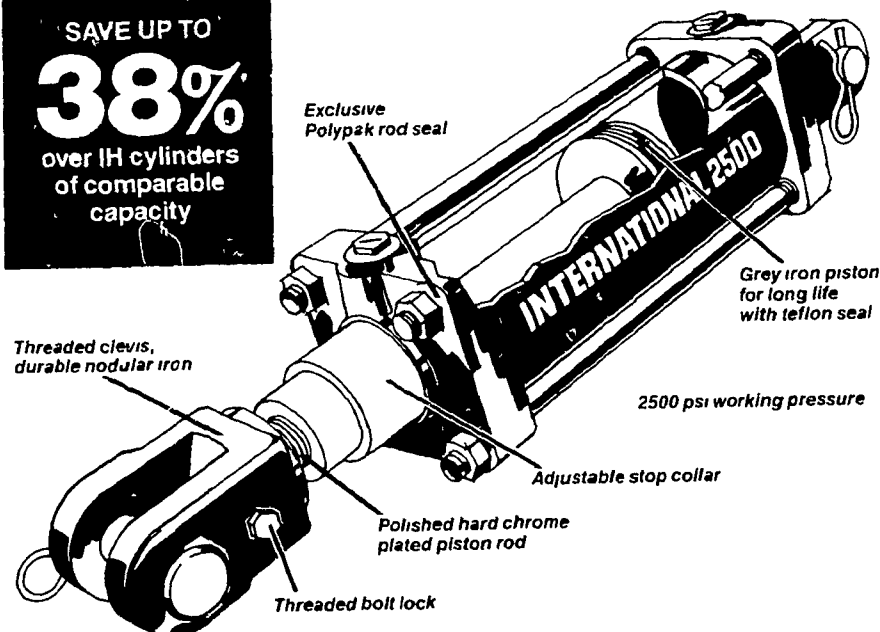

HYDRAULIC CYLINDERS

NEW International 2500 Cylinders

PARTS VALUE
OF THE MONTH

PARTS CO

Make every bite right.

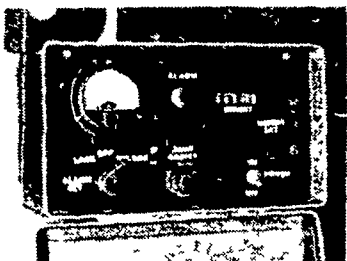

Combine
Ensilmixer®
feed mixer,
with scales,
and a
Jamesway®
TMR system.

You can increase production. Reduce feed costs. And improve labor efficiency. All, when you use an Ensilmixer feed mixer, with scales, by Oswalt® to round out your Jamesway Total Mixed Ration (TMR) feeding system (including silage distributor unloaders, conveyors and cattle feeders). Or, use it with any mechanized feeding system. Whether you prefer the stationary, trailer mounted or truck mounted model, it's a real profit building management tool.

Unique mixing pattern blends feed thoroughly. Three augers move feed from front to back and side to side. Reverse flighting at both ends lets feed fall freely for recirculation or discharge by the bottom auger. Uniformly mixes even partial loads.

Precisely weighs ingredients. Accurate weighing means consistent, balanced rations, eliminates waste. Lets you calculate the amount of feed needed and mix that much. Weigh bar system is standard, electronic scales optional.

That's why the Ensilmixer feed mixer, with scales, and TMR feeding system are right for you as well as your cattle. And, can help make farming just a little bit better. Ask your Jamesway Power Choring dealer.

We Have Models In Stock - Available At:

DEPENDABLE MOTOR CO.

WITH ON-THE-GO 12 SPEED POWER SHIFT!

2470 Case 4 wheel drive Diesel Tractor w/cab air heater 20.8x34 tires 3 pt hitch for in the furrow plowing, PTO 4 remotes On The Go power shift trans Like new with only 16 hrs 213 Engine H P

\$37,800⁰⁰

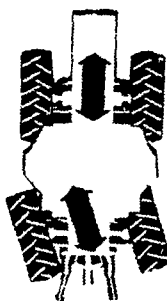

4 WAY STEER - Innovation Through Specialization

FRONT wheel steering Automotive-style control Ideal for row crops, most field work, road travel

COORDINATED steering Rear wheels and front wheels are electronically coordinated for sharp, full power turning

CRAB steering counteracts implement drift on sidehills Controls implement overlap Makes four tracks (eight with duals) for maximum traction

REAR wheel steering with electronic rocker switch "fine-tuning" makes implement hook-ups much easier Great for maneuvering around yards and buildings

Case 4 wheel drive 2470 w/2677 hrs., 3 pt. hitch, w/quick coupler & PTO, & 9 ft. wide angle dozer blade, ideal to clear those fence rows, cab, air, heater, 1973 model \$25,900

WE'RE OFFERING GREAT IH SAVINGS TO GIVE YOU THE RED EDGE

Our March Anniversary Savings are the best ever during our 150th Anniversary of the McCormick Reaper

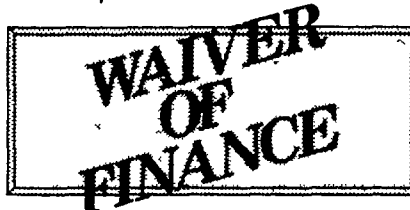

We've got Red Edge Rebates up to \$4,200 on new International® Tractors, Axial-Flow Combines and selected Hay and Forage Equipment in stock. Just make

your equipment purchase and take delivery by March 31, 1981 and you'll get a Red Edge Rebate directly from International Harvester.

Or get Red Power Dollars worth up to \$5,450 instead of a Red Edge Rebate. These are good toward the purchase of any new International equipment or parts. Savings choice No. 3 for International Tractors... get a free Cub Cadet®. That's right. With your purchase of any new, in-stock 4WD, 2+2 or Series 86 Tractor, you can receive a free Cub Cadet instead of a rebate or Red Power Dollars.

Waiver of Finance... a third way to save on Axial-Flow Combines and selected Hay and Forage Equipment. Just purchase the equipment you need by

March 31, 1981, finance through IHCC for a specified minimum number months and no interest will be charged until the next product use season. Waiver of Finance is available instead of, not in combination with, a rebate or the Red Power Dollars. See us for complete details.

Come in today! The sooner you buy the better your selection... the more you save. Offer ends March 31, 1981 and applies only to new, in-stock International equipment.

MODEL	MARCH RED EDGE REBATE	MARCH RED POWER DOLLARS	MARCH OPTION	MODEL	MARCH RED EDGE REBATE	MARCH RED POWER DOLLARS	MARCH OPTION

NEW International
Early Riser Planter

FASTER, EARLIER PLANTING—EARLY RISING CROPS.

Introducing the International Early Riser Planter, the planter for the 80's. Early Riser Planter is designed to work through the toughest terrain. To let you plow less, plant sooner. Faster, too — with simple hand adjustments that get you going in minutes. No tools. And the Early Riser Planter provides the best possible seed environment to start your crops out right.

Choose from four to twelve row Early Riser sizes. Cyclo Air or Plate models. The Early Riser Planter.

GUNITE Silo Relining & Repairs

Extensive tests have been conducted on Gunite. Below are some of the properties of Gunite

1. Excellent bonding

2. High Density

3. Extreme strength and hardness

4. High resistance to absorption

The excellent physical properties of the material are due to the water content being only the amount needed to satisfy chemical hydration. Reseal and re strengthen your silo with Gunite

One word of
advice on how to
buy a chain saw.

Husqvarna
That's the Swedish
word that has come to mean
the "finest" whenever the
subject of chain saws comes
up.

Yet the uncompromis-
ing precision and exceptional
longevity may make a
Husqvarna the least costly
in the long run.

We'll help you select
the correct model. And we'll
stand behind it with factory
trained service.

Come in—and let us
give you the word on chain
saws.

FARMS FOR SALE

GERMANIA CAMP Attractive 2 story farmhouse with many furnishings. Located along Route 144 on a 16 acre lot in southeastern Potter County. Well and septic. Ideally suited for 10-12 sportsmen. \$25,000.

NORTHERN POTTER CAMP Rustic two bedroom furnished camp located in the Millport area. Close to Oswayo Creek and State Game Land 204. Township road frontage. \$9,500.

CLARA TOWNSHIP FARMETTE Modern 3 bedroom rancher with full basement. Wood stove keeps heat bills at a minimum. Approximately seven acres + single story barn. Level fenced pasture for beef or horses. Located within easy walking distance of State Game Land 204 in northern Potter County. \$59,000.

OSWAYO TOWNSHIP Large two story country home and 20 acre located in northern Potter County. The home is heated by wood and gas. Attached two car garage. Two story building which could be used as a camp. The pond and trout stream on the property should provide that much needed relaxation. \$59,900.

Owner Ifert Brothers, Middletown, MD

TRUMP is an overall type improver with outstanding fore udder, center support, and front end improvement. He sires about average stature.

TRUMP should mate best on cows needing more strength, and udder improvement.

TRUMP is one of the very few bulls that is plus over +1300 lbs PDM, plus on PD Test and nearly plus one on PD Type. All this resulted from a random sampling A.I. proof. Note that his production proof has 85% Rpt and his type proof has a 74% Rpt. No wonder **TRUMP** is one of the most popular bulls in A.I. today.

TRUMP is available from your NEBA-Sire Power professionals. Contact them today. Phone 717-836-3168 or 717-836-3127.

CHORE-TIME

Turkey Confinement Production Systems

START YOUR TURKEY PULLETS RIGHT WITH THE MODEL "H" FEEDER UP TO 8 WEEKS

IT FEEDS BIRDS FROM DAY ONE.
Reduced pan height combined with higher possible feed level allows birds to get an earlier start.

IT PROVIDES STILL MORE FEEDING SPACE PER PAN.

Birds are now at the outer edge of the pan when eating, forming a large circumference from which to eat.

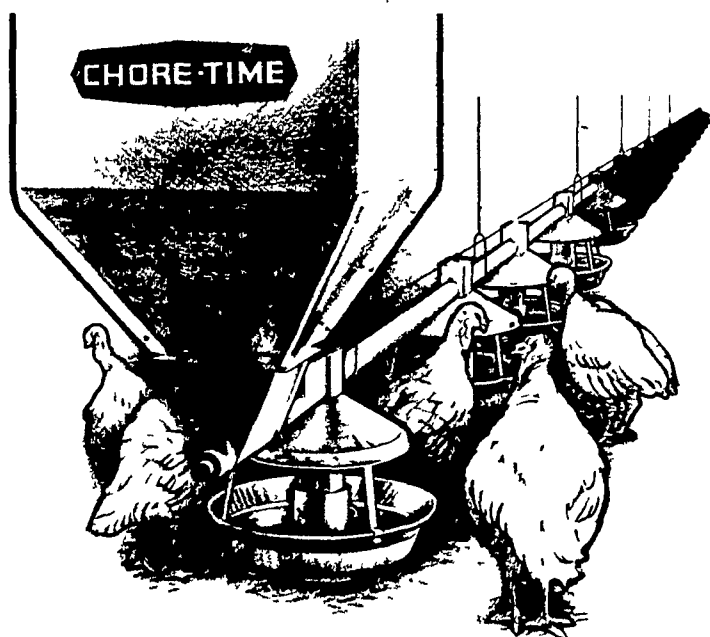

IT HAS A SIMPLER FEED LEVEL ADJUSTMENT.

This is particularly important when taking advantage of the programmed feeding concept and getting birds off to an early start.

IT IS DESIGNED WITH A MINIMUM OF PARTS.

Easier installation and minimal maintenance make this feeder even more reliable.

FINISH YOUR ADULT TURKEYS EVEN BETTER WITH THE "ATF" FEEDER FROM 8 WEEKS TO FINISH

STOP IN TODAY AND SEE THE EQUIPMENT ON DISPLAY OR GIVE US A CALL

CHORE-TIME AUGER . . . STANDARD OF THE INDUSTRY

. . . Chore-Time's straight line centerless auger mixes feed as it moves down the heavy duty galvanized metal tube to all the birds at the rate of 15 lbs. per minute. The rugged Chore-Time auger actually pulls feed which eliminates friction wear and extra horsepower required when augers push feed. So simple, effective and trouble free, is the Chore-Time manufactured auger it pulls feed on lines up to 550 feet long. There is a 10 year guarantee on the auger. Does any other manufacturer you know give such an endorsement of their equipment?

A. RUGGED SIMPLICITY IN DURABLE FEED HOPPER. . .

The single line 250 lb. capacity feed hopper is constructed of galvanized steel for maximum strength. The hopper is easily removed from boot assembly for complete cleanout. A special "Cannon Ball" steel agitator built into Chore-Time's turkey hoppers eliminates bridging.

B. LABOR SAVING "POWER LIFT" SUSPENSION SYSTEM

. . . Chore-Time's ceiling mounted "Power Lift" suspension system standard with the Adult Turkey Feeder . . . almost effortlessly lowers the complete feed line during bird growth or raises it out of the way for house clean out.

C. ELECTRO-GUARD POSITIVE ANTI-ROOST UNIT . . .

Each individual line of feeders contains a strong anti-roost wire and charger unit. Special plastic insulators on each feed pan securely hold spring loaded wire in place for dependable operation.

County Agent's wife

Ruth Smith shares time, talent

BY SALLY BAIR
Staff Correspondent

Ruth Smith is probably just as well known in agricultural circles as her retiring County Agent husband Max, although throughout their 43 years of married life she has striven hard to remain in the background.

Ruth and Max were a team, and Ruth frequently attended meetings with him. She says, "I've been a part of this. This is my life too, but I am just his wife."

Being "just his wife" meant giving a great deal of support, a great deal of time and a great deal of understanding for a job to which Max gave his all. Ruth readily admits she was surprised when she married Max and moved to Lancaster in 1938 in his second year of Extension work. "When I first came here I never realized one man could be away from home so much." Her father had had a trucking business, but she says, "When he came home, he was home."

Such is not the life of a county agent, and those early years could have been lonely ones for Ruth but she says, "I made up my mind I could either be unhappy or I could go along with it."

Go along with it she did, and she makes it clear that Max was very willing to include her in his active life. "He said to me, 'You can go with me any time, but I don't want to be late.'" So, she recalls with a laugh, "I knew I had to be ready on time."

She adds, "When I came here I found the town people so different from the people in the small town of Hickory where I grew up. I was very lonely because I didn't have many people I know. I was a very friendly person, so I had to worm my way into people's heart. But the country people were different - I had more Dads and Mothers; everybody took me under their wing."

"Smitty included me in everything. I went with him and I got to know a lot of people and a lot of 4-H'ers," she explains.

In those early days, she helped coach the flower judging team, which required her to gather the flowers they would be identifying each session. "I had to study, and I did a good bit on my own," she recalls.

She also helped Max with some of his outstanding demonstration winners by helping them speak with correct English, teaching them to express themselves and to add expression to their talks.

She adds, "I even worked with the 4-H choruses. Sometimes it would be a quartet and sometimes more than that. I also helped with their plays." Most of this entertainment she was involved in performed for the annual Baby Beef 4-H banquet.

The Baby Beef Club became as important in her life as it was in Max's. "I always decorated the tables for the banquets and I was very active in the Baby Beef barbecues. I helped take charge and organize it with the leaders' wives." The barbecue was a highlight for the 4-H'ers and their families and Max helped with the pit barbecuing of the beef.

Ruth admits that she was just proud of all those successful 4-H'ers as Max was. She says proudly, "They named some of their steers after me - and some after Smitty."

The 4-H work was important to both of them, Ruth says, "It kept

him young. It kept us both young." His success with youngsters is well known, and Ruth commented on that. "I think the kids looked up to Smitty. He had a way about him that kept them interested. This was his life - it was our life. He knew the kids who were interested, and he pushed it for them. He made them interested somehow. I think it was his personality. Smitty always felt he wanted to keep his finger in the club, because it is the only way to get to know the children. We have always felt the man in charge should be part of it to know the children. I feel you have to use leaders, but there is a place for the county agent. He wanted to be part of the club."

Another reason for his success she surmises, "His goal was always high. He strove for it. He didn't do much else - he had long, hard hours."

It's virtually impossible for a county agent's wife not to be closely involved with his activities. Asked if she learned a lot about beef over the years, Ruth answered, "We sleep, eat and drink it at our house." Furthermore, there are the early morning and late night phone calls. Although times have changed, Ruth recalls that people sometimes called Max instead of the veterinarian if something went awry with their project animals. And Max responded, no matter what time of night or day.

In working with 4-H youth, Max frequently visited farms and gave advice. Ruth says, "I used to go with him, and it would often get to be 12 or 12:30 at night and I'd be sitting in some barn someplace waiting patiently while he demonstrated sheep shearing. He taught them how, then let them do it and then returned to give suggestions."

In the earlier days, Ruth filled in at the office, working on Saturday mornings. She also worked in the Farm Labor office during the war years.

She helped to make 4-H exhibit signs and helped with some of the

Flowers play a big part in Ruth Smith's life. She not only enjoys growing them, but gets special pleasure from arranging them and presenting them to friends as gifts.

book work following 4-H sales and shows. About beef shows she says, "I was always there. I always go with him when he judges." Asked if she ever questions his placings, she answers emphatically, "Never!" She said he enjoys judging and has a photographic memory which allows him to describe animals weeks later.

Because of his involvement in buying calves for the 4-H'ers in the early days and his travels to national conventions, Ruth has traveled with Max around the country. Her long travels slowed down after they got dogs, but she had one dog which often went along. "Baldy always went with us, and he was known far and wide," she recalls.

Throughout the years the extension office and its programs has grown and changed dramatically. Ruth comments, "Max just got busier and busier."

Ruth has served as assistant building manager for the Farm and Home Center filling in for Howard Campbell when he vacations. She plans to continue that position after Max's retirement.

Despite her close involvement in Max's career, Ruth has a very active life of her own. Both Max and Ruth are active in the Bethany Presbyterian Church, and Ruth has served as president of the Women's Association there. She

says, "It's been part of me ever since, and I'm on many committees."

For the past 15 years she has served on the flower committee and one of her chief responsibilities has been to decorate the church at Christmas, a job she doesn't take lightly. Although she'd like to get away from the actual decorating, Ruth says, "I'll probably continue to plan it. We do a lot of decorating, but it is not fancy."

She is also responsible for memorial flowers at both Christmas and Easter and adds her own personal touch of friendliness by calling prospective donors "I handle all the money and make the list to appear in the bulletin. I also decide how the flowers will be placed."

She is a member of the Kings

Daughters and the Iris Club, where she serves on the garden committee which works all year making crafts and arranging greens for sale at Christmas season. She helps too with the flowers for the tea table.

When she first moved to Lancaster, she served as a leader for the Girl Reserves, sponsored by the YWCA, and worked with two groups for four years each.

Ruth takes her crafts seriously and for one of the bazaars she worked with she created a book for children. It was a "look and learn" book designed to help children learn to tie shoes, close buttons and identify plants and animals. She spent hours creating the book and filled orders after the bazaar.

Ruth is good with her hands, perhaps because her grandmother

(Turn to Page C4)

Homestead Notes

Ruth's crafts are varied and interesting. Here are a pine cone wreath, a Della Robbia wreath, a cornucopia and a pine cone deer.

Having tea with a friend adds a lift to the day. Here she prepares for tea, serving her own made divinity and chocolate chip cookies.

This Pennsylvania white tail deer was fashioned by Ruth from the petals of pine cones, attached to a form made of paper machier.

Smith offers time

(Continued from Page C2)

taught her to quilt as a child. She knits and crochets, making baby clothes for relatives.

Her home and storage areas are filled with other crafts. Della Robbia wreaths for Christmas, pine cone ornaments, small refrigerator magnet, quilting and lavishly-sequined calendars. She has learned macrame and says, "I like to learn new things and figure Things out for myself."

Although machine sewing is not very interesting to her, she is currently working on a vest for Max.

Ruth and Max share a Scotch-Irish heritage. Ruth says, "My people were in Lancaster County when they first came here. They owned many acres of ground here in the Pequea area. But I think they were used to the highlands and they migrated to western Pennsylvania." Her relatives arrived in Philadelphia between 1722 and 1728 and then moved to Salisbury Township between 1733 and 1738.

The Smiths have owned two homes in Lancaster, one in Atkins Avenue where they lived for 20 years, and their present home on South President Avenue. They drew up their own house plans, but Ruth recalls, "This house is smaller - we cut back after they told us how much it would cost."

Their home is a showcase for both their talents and their interests. "He and I planted every bush and every tree on the property," Ruth relates. "I wheeled 10 tons of peat moss on the lawn and he spread it. We always worked together in everything we did."

"I like flowers so I started Chrysanthemums - now he's more interested in them. I started growing oak trees and for many years we grew them for ourselves. After we had 65 cut down we weren't so interested in growing them any more."

Their lawn and garden is a

delight, with seasonal flowers in abundance and Ruth always has cutting flowers to fulfill her joy of arranging flowers for friends and neighbors.

The Smiths are birdwatchers, and Ruth proudly says, "We've got 16 or 18 doves which stay in our big trees. We have a cardinal or two and blue jays which come to the door and tell me they want peanuts. We have a lot of robins, cat birds and sparrows."

Together the Smiths enjoy working on jigsaw puzzles, something they can do for hours.

One love of Ruth's is cooking, and she says with a mischievous smile, "I always fed Smitty when he came to visit before we were married. Now I've got to have cookies around here and I used to bake one day a week when we were younger. I can and freeze and make jams and jellies."

She also likes to experiment with recipes, adding, "I am forever changing recipes." Some of her recipes can be found in the cookbook prepared by her church which she helped to assemble.

A Christmas time it is not unusual for her to make 15-20 kinds of cookies. "I give them to neighbors and friends," she explains. She has also been known to keep the extension office staff well supplied with cookies and flower arrangements.

An important part of Ruth's life is serving others. She enjoys sharing with friends and keeping in touch by letter and phone. "If you aren't a friend you don't have any. I like to do it for others."

Max's retirement will change Ruth's life somewhat because she will probably get to see him more. But it won't change completely, because she will continue her crafts and her service to others. Furthermore, she states, "I am a very contented person. I can always content myself in my home."

She views the retirement with

mixed feelings, but states "I'll be very happy to have him home. She quickly says, "I would not change

anything. I've always been very proud of Smitty."

Ida's Notebook

Ida Risser

Sometimes my family feels as though we are living in a public park without benefit of my rules or

regulations. There is no respect for private property in our neck of the woods.

I've just discovered two large duck blinds in our back meadow out of sight of our buildings. It appears that neighborhood boys built them and used them even when it was not duck hunting season. There were several fires built inside them and telltale magazines left lying around.

To make matters worse many of our summer cottages were broken into again. It must be discouraging to stop at your cottage for a few hours of relaxation and find that it is a complete mess with doors and windows in need of replacing.

It is also difficult to apprehend motorcyclists and riders of dirt bikes who think our fields are their fields. And of course, we are also a

depository for garbage bags and beer cans.

Our mailbox, with a heavy metal post, was run down this Winter and our neighbor's small building along the road was also splintered with his mailbox under it.

We have lived there 30 years without 'posting' our land but we have reached the end of our rope. Hunters park by our front yard, jump out and shoot rabbits on the

far side of our garden with never a, "May I?" Parents allow children with rifles and shotguns to run free and shot at anything that moves.

People wonder why those "old farmers are so grouchy" and selfish. They drive us to it!

The few kind souls who ask permission to hunt and fish will still be welcome here but we have had it with the general public.

Pies, a last winter treat

Though spring has come, according to the calendar, those cold wintery days linger on. Evenings still are spent enjoying warm desserts around the fireplace or television, depending upon your interests.

Pies seem to be a delicious cold weather dessert. We ran pie recipes in February and we received such an overwhelming response, we couldn't include them all. So here are some more along with one of your last chances to bake up a cold weather dessert.

Crunchy Crust Blueberry Swirl Pie

1/2 c. margarine, melted
3/4 c. flour
1/2 c. rolled oats
1/2 c. chopped nuts
2 T. sugar
Filling:
3 oz. pkg. lemon gelatin
1/2 c. boiling water
21 ounce can Blueberry Pie filling
1/2 c. dairy sour cream

Heat oven to 400 degrees. Lightly spoon flour into measuring cup; level off. In small pan melt margarine. Stir in next 4 ingredients. Mix well and pat into ungreased 9 inch pan. Bake at 400 degrees for 12-15 minutes or until golden brown. Cool.

Dissolve gelatin in boiling water. Stir in blueberry filling. Chill until thickened. Pour into pie crust. Spoon sour cream onto filling. Cut through sour cream and lightly swirl. Chill. If desired, add whipped cream

Peach and Cream Cheese Pie

3/4 c. flour
1 t. baking powder
1/2 t. salt
1 pkg. vanilla pudding, not instant
1 egg
1/2 cup milk
1 can peach halves
18 ounce cream cheese
1/2 c. sugar
3 T. peach juice
1 T. sugar
1/2 t. cinnamon

Mix the flour, baking powder, salt, vanilla pudding, egg and milk together. Pour into a greased 9-inch cake pan or 10-inch pie pan. Place on top, 1 layer of drained peach halves. Next mix the cream cheese, sugar and peach juice. Spread over peaches about one inch away from edge of pan. Mix the sugar and cinnamon and sprinkle on top. Bake at 350 degrees for 30 to 35 minutes. This recipe yields one pie

Mrs. Merle Mishler, Holsopple

Peach Cream Pie

1 unbaked pie shell
3 T. flour
1/3 c. sugar
little salt
1/4 t. nutmeg
3/4 c. medium cream
1 can peach or fresh peach

Chill pie shell and prick a little with fork. Bake in hot oven (400 degrees for about 6 minutes). Mix next 4 ingredients and add cream and mix well. Put peaches in shell and pour cream mixture over fruit. Bake in hot oven (400 degrees) for 40 minutes or until set. Cool. Serve.

Mrs. Charles Biehl, Mertztown

Breakfast is believed by many nutritionists to be the most important meal of the day and most recommend serving eggs. Why not in-

clude this nutritional dish into a dessert? Would you believe egg and cheese pie or Quiche O'Brien? Try it.

Cook's Question Corner

QUESTION - I would like a recipe to make yogurt. Could anyone help me?

Mrs. Charles Bittner, R1, Elysburg

QUESTION - I would like a recipe for Wet Shoo-Fly Pie and one for Apple Crumb Pie. The Apple Crumb Pie I wish has semi-solid sugary crumbs on top and not a powdery confectioner's sugar. Perhaps some readers would be able to help me.

Arnold Waly, Crownsville, MD

QUESTION - I would like a recipe for macaroni salad. Anybody have one?

Diane Musser, Mechanicsburg

ANSWER — In response to a request for buck wheat cakes, we have "Sour Milk Buckwheat Cakes" from Bertha Trayer, Age 12, of Hartly, Delaware. Find it at the end of the recipe section.

Peanut Butter Pie

19-inch pie shell, baked
1/2 c. peanut butter
2/3 c. powdered sugar
2/3 c. granulated sugar
3 T. cornstarch
1/2 t. salt
3 c. scalded milk
3 eggs separated
1 T. butter
1 1/2 t. vanilla

Blend peanut butter and powdered sugar until mealy, sprinkle 2/3 mixture on bottom of the baked pie shell. Combine the beaten egg yolks, salt, cornstarch and sugar and stir into scalded milk. Cook until thick, stirring constantly. Add vanilla and butter and cool slightly. Pour into pie shell and top with meringue. Sprinkle remaining peanut mixture on top of meringue. Bake at 375 degrees for 8 to 10 minutes. Meringue: beat 3 whites with 1/4 t. cream of tartar and 6 T. sugar until stiff and glossy.

Diane Karabon, Southington, Ct.

Egg and Cheese Pie

1 pie shell, unbaked
6 eggs, beaten
1 can evaporated milk
8 ounces American cheese, cubed
1 T. instant minced onion
1/2 t. seasoned salt
1/4 c. chopped green pepper
2 T. chopped pimiento

Brush pie shell with small amount of the beaten eggs. Prick bottom and sides with fork. If using metal pie pan, bake shell in

preheated 450 degree oven until golden brown, about 5 minutes. If using pie plate bake shell at 425 degrees. Cool on wire rack. Reduce oven temperature to 375 degrees for metal pan or 350 degrees for pie plate.

Meanwhile, in medium saucepan combine milk, cheese, onion and salt. Cook over medium heat, stirring frequently, until cheese melts. Gradually beat hot cheese-milk mixture into eggs. Stir in green pepper and pimiento. With pie shell on oven rack, carefully pour egg mixture into shell. Bake in preheated oven until knife inserted near center comes out clean, about 30 minutes. Let stand 5 minutes before serving.

Prebake shell in preheated 450 degree oven for 5 minutes. Bake filled at 350 degrees until done.

Baked Banana Pie

3 eggs
3/4 c. milk
1/4 c. sugar
1/4 c. flour
1/4 t. nutmeg
4 ripe bananas, mashed

In bowl, beat together eggs, milk, sugar, flour and nutmeg just till smooth. Stir in bananas. Turn into buttered 8 inch pie plate. Sprinkle with additional nutmeg if desired. Bake in 350 degree oven for 35 minutes or until knife is inserted just off center and comes out clean. Cool, then chill. Top with whipped cream if desired.

Barbara Russell, Pine Bush, NY

Maple Cream Pie

1 3/4 c. milk
1/4 c. cornstarch
3/4 c. maple-blended syrup
1/4 t. salt
2 egg yolks, slightly beaten
2 T. butter
1 c. whipping cream
1 T. maple-blended syrup
sliced almonds, toasted

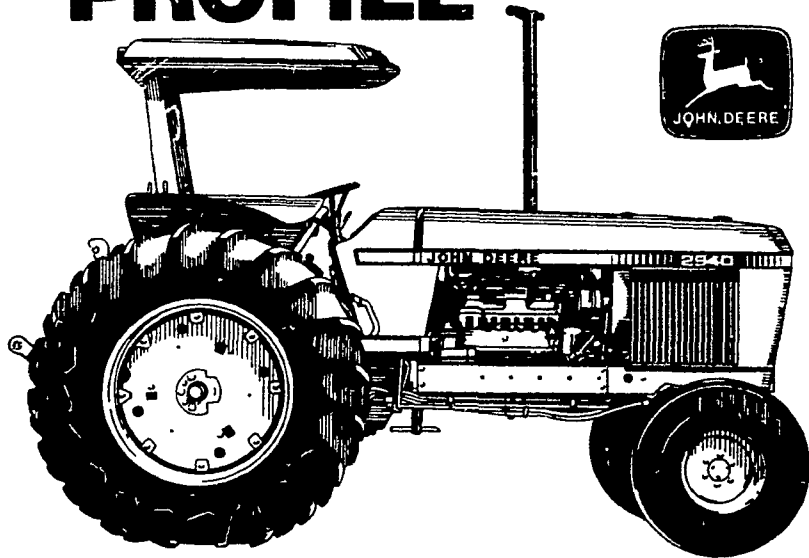

Blend together 1/4 c. milk and cornstarch in saucepan. Gradually stir in remaining milk, 3/4 c. syrup and salt. Cook over medium heat, stirring constantly, until mixture comes to a boil. Stir small amount of hot mixture into egg yolks. Return egg mixture to saucepan. Cook, stirring constantly, until thickened. Remove from heat; stir in butter until melted. Cool thoroughly.

Whip cream in a chilled bowl with chilled beaters until stiff peaks form, scraping bowl occasionally. Fold half of whipped cream (about 1 cup) into filling. Pour into mold. Fold 1 T. syrup into remaining 1 cup whipped cream and use to frost top of pie. Chill several hours. Garnish with almonds.

PERFORMANCE PROFILE

The 80-hp 2940 — 6-cylinder engine, smooth TSS transmission, operator comfort and real performance

Now 80 horsepower looks better than ever with the John Deere 2940. A beefed-up 6 cylinder engine, the synchronized TSS transmission and Hi-Lo shift as standard equipment for 16 forward and 8 reverse speeds, big fuel tank capacity, hydrostatic steering, electronic instrument panel, and a completely adjustable seat all add up to performance. And now you can stretch that 80-hp performance even further by equipping your 2940 with John Deere's mechanical front-wheel-drive option. On-the-go engagement or disengagement is just one of the many features that can help you keep going when you hit soft or wet conditions. The John Deere 2940 — it's real 80-hp performance.

We'll give you a good deal on a high-clearance 1250 Integral Plow

This light-draft plow gives you 30 1/4 inches of trash clearance under the main truss tube — a torsion-resistant 5-inch-square steel tube. Sizes? Take your pick of 3-, 4-, or 5- bottom 16-inch, or 4- or 5- bottom 18-inch. One is ideal for your tractor. More information? Price? See us. We'll deal.

For crusty, clod-filled seedbeds or loosely tilled fields, this 950 Roller Harrow is your seedbed saver

This problem solver should be in your shed ready to save a seedbed when trouble pops up. Serrated or crowfoot rollers and spring teeth break clods and condition soil. The result — a better environment for seed germination.

MOW IT, BAG IT. ONE-STEP LAWN CARE WITH JOHN DEERE LAWN TRACTORS

Take care of your mowing and bagging chores in one simple operation with a John Deere Lawn Tractor and optional 4-bushel rear bagger.

John Deere Lawn Tractors are available in two models — the 8-hp 108 with 30-inch mower and the 11-hp 111 with extra-wide 38-inch mower. Both models feature color-coded controls for quick identification. And a 5-speed transmission with on-the-go shift conveniently mounted on the right fender deck.

These tractors are designed for your safety and comfort. A triple-safety system guards against accidental starts. And a safety switch automatically shuts off the engine if you leave the seat with the PTO engaged. There's an adjustable, padded seat mounted on two springs for an easy ride. And a roomy operator's area with 2-position footrests.

Take care of mowing and bagging chores the easy way with a 108 or 111 Lawn Tractor. For snow removal and light grading, a 32-inch snow thrower and 42-inch front blade are also available.

See us today for a John Deere

Pies

(Continued from Page C6)

Toll House Pie

2 eggs
1/2 c. unsifted flour
1/2 c. firmly packed brown sugar
1/2 c. sugar
3/4 c. margarine, melted and cooled
16 ounce pkg. semi-sweet bits
1 c. chopped walnuts
19-inch unbaked pie shell

Preheat oven to 325 degrees. In large bowl, beat eggs until foamy, beat in flour, sugar and brown sugar until well blended. Blend in melted margarine. Stir in semi-sweet bits and walnuts. Pour into pie shell. Bake one hour. Serve warm.

Molhe Tressler, Marietta

Here is an answer to a request for buck wheat recipes.

Sour Milk Buckwheat Cakes

2 c. buckwheat flour
3/4 c. white bread flour
2 t. baking powder
1 t. soda
1 t. salt
2 c. sour milk or buttermilk
1 1/4 c. sweet milk
1 T. shortening

Measure and sift dry ingredients together. Add milk gradually, stirring constantly to make a smooth batter. Add melted shortening. Bake on a hot griddle. Makes 8 medium-sized cakes.

Bertha Trayer, Age 12, Hartly DI

Ladies Have You Heard?

By Doris Thomas

Lancaster Extension
Home Economist

WHEN VITAMINS MAY BE DANGEROUS

Do you feel that taking massive doses of vitamins such as C or E are going to do wondrous things for your body? The belief that vitamins are therapeutic agents has become increasingly popular.

Many people now believe that very high doses of various vitamins will cure a host of physical and psychological problems. The general public needs to find out which of these claims are myths and which may actually contribute to better health.

One of the biggest controversies has been whether or not vitamin C will help keep you from getting the common cold. There is no scientific evidence that vitamin C kills the cold virus in individuals with colds. What it may do is dry up the nasal passages so that cold symptoms seem less severe.

Taking excessive doses of vitamin C can actually cause health problems rather than help them. One of these problems has been termed "rebound scurvy". When you take large doses of

vitamin C your body machinery which breaks down this chemical speeds up. When you stop taking the high dose it then slows down gradually.

This short term case of scurvy can include swelling and bleeding of the gums, loosened teeth, muscular pain and roughened skin. Because this scurvy is only temporary, however, the health hazard for adults is minimal.

This same type of "rebound scurvy" can occur in the newborn infant whose mother has taken megadoses of vitamin C during her pregnancy. This situation is potentially more dangerous.

There is also recent evidence that excessive doses of vitamin C can result in inaccurate blood sugar tests in diabetics. High doses may also produce menstrual bleeding in pregnant women and increase the potential for the development of kidney stones in some people.

Vitamin E is another popular vitamin these days. People have a notion that it can promote physical endurance, enhance sexual potency, prevent heart attacks and slow down the aging process.

These claims are all unproven. Vitamin E supplements are used

therapeutically for premature babies who may have received inadequate amounts before birth and for people who have intestinal disorders in which fats are poorly absorbed.

Megadoses of some vitamins may hold promise for the future in treating certain diagnosed physical conditions but they are not good for everything that ails everyone. A well-balanced nutritious diet will supply all the vitamins a normal person needs to maintain good health.

ABOUT PROFESSIONAL CARPET CLEANING

The best cared for carpet eventually needs the revitalizing only shampooing, steam cleaning or dry cleaning can give. In fact, if your carpet looks lusterless, listless and worn and you're contemplating replacement, try a thorough cleaning first. You may find that was all your carpet needed.

Professional cleaners offer convenience and a thoroughness often difficult to obtain with do-it-yourself equipment. A glance at the yellow pages in most areas will reveal a variety of services.

You should find steam flush and extraction, soil extraction using injected water vapor, rotary method with wet shampoo, and dry cleaning methods offered. All but dry cleaning are done right in your home and most drycleaners offer free pick-up and delivery.

Many dealers offer more than one method and decide which one to use when they see your carpet.

If the work is to be done in your home, there are several things you should do prior to and following the cleaning. Pin up curtains or draperies and vacuum the carpets thoroughly.

Your furniture will need to be moved, but most professionals will do this. The professional should also pre-treat many spots and

stains, but you may want to point out these areas to be sure they are not overlooked.

After cleaning, ventilate the room well for fast drying. If you must replace furniture before the carpet has fully dried, place pads of aluminum foil or plastic wrap under the chair and table legs to prevent rust marks. Wait until the carpet has completely dried before vacuuming or damage may result to your vacuum cleaner.

Most "in-home" professional cleaners charge around 15 cents per square foot, but this varies with the area. Some charge a few cents more per square foot if they have to move your furniture. A number of "in-home" carpet cleaners stress that they use their own electricity.

In-plant cleaning runs around 23 cents per square foot. However, cleaning oriental rugs and braided rugs, the latter because they are reversible, costs up to 35 cents per square foot.

Don't hesitate to ask for references. Do insist that the professional cleaner begin in an inconspicuous spot so if problems occur, the process can be changed or halted.

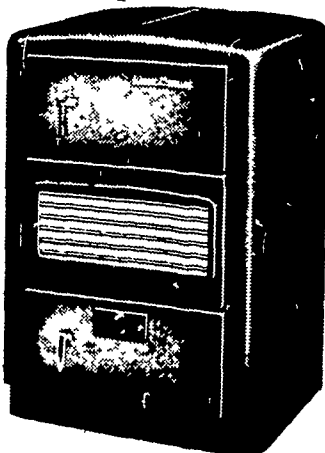

Most dealers offer no guarantees, which protects them against the wide range of quality and wear they are faced with in the carpets and rugs they clean.

COAL & WOOD STOVES

Warm Morning COAL HEATER

Only a genuine Warm Morning has the famous patented 4-flue firebrick construction that turns coal into glowing coke heats 24 hours or more without refueling. The little extra a Warm Morning costs originally is repaid over and over again in satisfaction and fuel savings!

Lancaster Co. Society 7

Farm Women No. 7 met Saturday, March 14 at 1 p.m. at the Presbyterian Church social room in paradise.

Guests were Society 30 and county officers.

Betty Brubaker, president of the Society presided and each member answered roll call by naming their favorite bird and why?

Chet and Jean Ramsey gave an interesting program "Birds of a Feather."

Next meeting will be held at the home of Esther Hoffer, 2444 Ellendale Drive, Lancaster, Pa., April 11 at 2 p.m.

Lancaster Co. Society 8

Farm Women Society 8 drove to Willow Valley Monday, March 16. Thirteen members and three guests attended.

Members then travelled a short distance to the Jay Evans home at Willow Street, Pa.

The Evans' family specializes in making many Easer Candies to sell, using no wax, no parafine and no preservatives.

The group heard Mr. Evans describe the story of the beginning of their project and how it has grown. He and Mrs. Evans demonstrated the process which they use. Each guest was privileged to make a chocolate

form using their small molds. They also enjoyed a tasty snack using the soft chocolate as a dip.

Each one then entered their sales room containing many shelves of chocolates for the coming Easter season. There they could purchase the candies of their choice.

There was a brief business session in charge of Kathryn Erb, president.

The next meeting will be held at the home of Gladys Ney, Marietta R1 April 25 at 2 p.m. This will be a Safety Program.

Lancaster Co. Society 13

Lancaster Women 13 held their regular monthly meeting recently and entertained Society 3 at a luncheon at the Farm and Home Center.

Mrs. Ruth Schroeder, chairman of the program committee, was in charge of the program which was titled "Hello Dolly." It was presented by Mrs. Dorothy Parmer and her daughter Patricia. They played the piano and sang songs. Then they presented 15 dolls wearing costumes that were replicas of those worn in several operas.

The next meeting will be held at the home of Mrs. Dottie Leaman, Ronks, with Mrs. Edie Gehman serving as co-hostess. It will be held Friday, April 10 at 7:30 p.m.

Lancaster Co. Society 14

Wednesday, March 11, Farm Women 14 met at the home of Mrs. Edwin Rohrer, 505 Paradise Lane, Paradise.

Hostess was Ruth Combs. Roll call was answered by showing or modeling an old or a new hat and giving comments on

the special occasion for which it was worn.

Mention was made of the recent death of the oldest member, Mrs. Elizabeth Mylin. She was 101 years old.

Our president, Miriam Leaman, had members vote for the County project they prefer to support. The 4-H project was favored.

Members were reminded that on March 26, at 1:30 p.m., members of Society 14 and Society 15 are to visit with guests at Conestoga View.

Anyone interested in going to the Spring Rally May 21 at Dickenson College please let Miriam Leaman know. Bus transportation will be provided.

Twenty Dollars will be given to Easter Seals.

Pauline Stoltzfus introduced Mrs. Bette Carlee, who entertained members with her humorous anecdotes as she modeled a lovely variety of hats worn for diverse occasions. This was followed by a demonstration of clever ways to wear scarves of different shapes and sizes.

Our next meeting will be April 8 at 9:00 a.m. for a tour of local business establishments. This is "Local Appreciation Day."

Lancaster Co. Society 19

A Saint Patrick's lucheon was held for members of Society 9 by Society 19 recently.

Votes were taken for the county project.

There will be sewing at the General Hospital soon.

For entertainment, Mrs. Brubaker showed pictures, "Through the seasons of Lancaster County."

Lancaster Co. Society 21

Esther Graybeal was hostess at the March 12 meeting of Farm Women 21.

Thirteen members responded to roll call with show and tell.

Plans were discussed for the food stands at sales on March 21 and 27.

Members decided to add in guidelines that a member should receive a sympathy remembrance upon the death of a parent.

The date for the visit to Conestoga View in June was changed from the 18th to the 15th.

Members voted to support 4-H as the choice for the county project.

County officers and state president, Mrs. Hess, have been invited to the next meeting at the Mechanic Grove Church of the Brethren.

Following business, Esther Graybeal showed Smithsonian slides about early musical instruments.

Lancaster Co. Society 22

Farm Women Society 22 entertained Society 12 at the Willow Street U.C.C. Church, on March 10.

At Roll Call, each member introduced their favorite guest.

The members were reminded of the Spring Rally at Dickenson College on May 21. Mr. Charlie Plum will be the speaker. At present, 8 members will be going.

The 4-H Clubs were voted to be the county project for the coming year. Mrs. Judy Zedet thanked the members for making lap robes, cancer pads, etc. for various nursing homes at the February meeting.

The program was on the Deaf Services to the Community. Miss Janet R. Sterba of the Deaf Agency gave a pantomime in sign language set to music. She was assisted by 4 other volunteers

The next meeting will be held at the home of Mrs. Ralph Martin, 391 Myer Terrace, Leola, Pa.

Berks Co. Society 3

Berks County 3 held a Valentine Exchange at their last meeting at the home of Mrs. Lydia Cleaver, 22 Orchard Hills, Boyertown.

During the business meeting conducted by president Mrs. Harvey Moyer, the ladies were reminded of the following dates:

April 9 - Bingo Party at Berks Heim. Prizes are needed.

May 21 - Pennsylvania Society of Farm Women Spring Rally at Dickenson College, Carlisle.

The women voted to give monetary donations to the following organizations;

Berks County Heart Association, Boyertown Multi-Service, and East Township Volunteer Fire Co.

Mrs. William Renninger told members they would have a stand at a sale on March 21.

The next meeting will be a breakfast meeting at Oley Legion Diner at 9 a.m., March 24, and the business meeting will be at Mrs. Loeb's home Oley, R2.

Lebanon Co. Society 20

Lebanon County Farm Women met at Royer's Garden Center in Lebanon recently for a guided tour.

Seventeen members attended.

The next meeting will be held at the home of Marion Maulfair.

Kid's KOrner

Name our puppy

Kids, a subscriber just received this little puppy and now it needs a name. Isn't she cute? She's a black and white Border collie that loves to run and play and be onery. What would you call her?

Mom's recipes this week are pies. Why not make some more desserts and try cakes? Here are four of our reader's favorite cake recipes.

SPICE CAKE

3/4 c. shortening
1 1/4 c. brown sugar
1 c. white sugar
3 eggs
1 1/2 c. buttermilk
3 c. flour
1 t. salt
1 1/2 t. soda
1 1/2 t. cinnamon
3/4 t. nutmeg

Blend shortening and sugars. Add eggs. Add milk and dry ingredients alternately. Mix thoroughly. Bake at 350 degrees for 35 to 40 minutes.

Arnold Eby, Age 9, Flintstone

COCOA CHIFFON CAKE

1/2 c. baking cocoa
3/4 c. boiling water
8 eggs (separated)
1/2 t. cream of tartar
2 c. sifted cake flour
1 3/4 c. sugar
1 1/2 t. baking soda
1 t. salt
1/2 c. salad oil
2 t. vanilla

Mix cocoa with boiling water. Beat egg whites with cream of tartar until very stiff peaks form. Sift together dry ingredients into a mixing bowl. Make a well in the center. Add oil, egg yolks, cocoa mixture, and vanilla. Beat well. Fold in egg whites. Pour into an ungreased ten inch tube pan. Cut through batter with spatula. Bake at 325 degrees for 55 minutes. Increase temperature to 350 degrees for 55 minutes. Increase temperature to 350 degrees. Bake 10 minutes longer or until done. Invert to cool. Frost with your favorite chocolate frosting.

Mrs. Abram Beiler, Laverpool

JEWISH APPLE CAKE

3 c. flour
3 t. baking powder
1 c. oil
4 eggs
2 c. sugar
1/4 c. orange juice
2 1/2 t. vanilla
2 or 3 apples thinly sliced
Mix everything together but apples. Use angel food pan, grease and flour it. Put 1/2 batter in pan, slice apples over batter and sprinkle with sugar and cinnamon. Put in remainder of batter and repeat with apples and sugar and cinnamon. Bake at 350 degrees for one hour and 15 minutes.

Katie King, Leola

BUTTERMILK CAKE

4 c. flour
1 c. sugar (white)
1 c. sugar (brown)
3/4 c. lard
Mix this together in crumbs. Take out 1/2 cup, then add:
1 1/2 c. buttermilk
1 t. soda
1/2 t. cinnamon
1 t. vanilla
Put crumbs on top and bake.
Bertha Troyer, Age 12, Hartly, DI

This bunny's getting tuned up for Easter, are you? Remember, it's less than a month away. It's time to think ahead to coloring eggs, buying mom and dad some candy and dressing up for church. Help the bunny get ready too by coloring him.

April is...

April will arrive this week and with it will come lots of fun things to do and many special days. What is April? Unscramble the words and find out what all April offers.

National 4-H conference set

WASHINGTON — More than 300 delegates will attend the 51st national 4-H conference at the National 4-H Center here April 4-10 to discuss and recommend future directions for the nationwide 4-H youth programs.

Delegates will discuss a broad range of topics, said Eugene Williams, assistant administrator for 4-H in the U.S. Department of Agriculture's Science and Education Administration — Extension.

These topics will include jobs and careers, international programs, working with disabled and aging people, conservation of natural resources, camping, food for fitness, and family and community involvement. They will recommend future program directions to the 4-H Council.

The delegates include teenage 4-H members, volunteer leaders and Cooperative Extension staffers from 46 states, Puerto Rico, the Virgin Islands and the District of Columbia. Participants represent the more than 5 million 4-H members and the 575,000 adult 4-H volunteer leaders across the nation.

Ten delegates from Canada also will participate as a part of a Canada-United States 4-H exchange program.

The conference opens Saturday, April 4, at 7:30 p.m., with greetings by Williams and Grant A. Shrum, executive director of the National 4-H Council.

The Keynote address will be given by a 4-H alumnus, Clayton Taylor, government relations representative of McDonald's Corp., Oak Brook, Ill.

Other highlights of the week will

include a discussion of agricultural issues at USDA and a day on Capitol Hill to see Congress in action and meet with members of Congress. Also scheduled are theater performances and a visit to the Smithsonian Institution.

The meeting closes with a visual review of the conference on Friday morning. Delegates will return home to share their experience with other 4-H members and leaders in their communities.

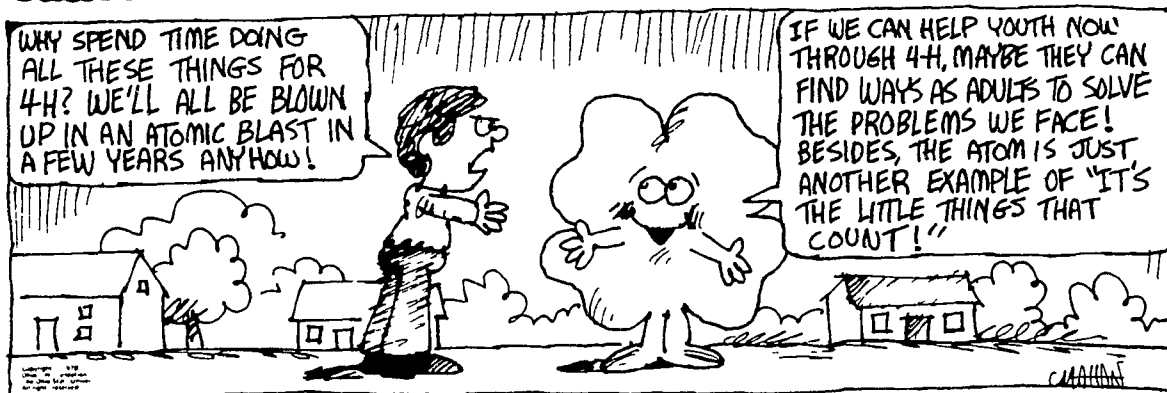

The conference is conducted under the leadership of USDA's Science and Education Administration, the Cooperative Extension Services of the nation's land-grant universities and the National 4-H Council.

4-H woolies to meet

LANCASTER — The Lancaster County 4-H Woolies Club will hold its organizational meeting on Tuesday night, March 31, at 7:30 p.m. at the Coca Cola Bottling Company on the Manheim Pike — just across from Hardees.

Come, join the Woolies Club,

CHRIS CLOVER

York 4-H baby beef meets

YORK — The York County 4-H Baby Beef Club held its monthly meeting March 9, at 7:30 at the 4-H center.

The preview show was then discussed. It will be May 23, at the York Fairgrounds. The arrival time is 8, the weigh-in is 9.

Entry fees of \$1 will have to be in by April 24. Cheryl Moran is first choice to be the judge. A committee was picked to set up the ring and later clean it up.

The weigh-in and freeze branding will be April 4 at the fairgrounds. It will be from 9 to 12.

The meeting for April 6 will be on feed rations. The May 3 meeting will be on showmanship and fitting

at Warrington Green Farms and the June 1 meeting we will be making rope halters according to the program committee.

Our exhibit for the 4-H expo will also be used for the York County Farmers' Association tour at Nelson Brennemanns on June 20. The Beef and Swine Clubs will be in charge of food that day.

April 11 is the spring judging contest at Penn State and clubs are limited to 12 contestants.

March 28 will be a judging practice and on April 4 at the freeze branding there will also be one.

April 25 is the Little International at Penn State.

Landscape a great outdoors

BY DEBBIE KOONTZ
LITITZ — Most people tend to take home landscapes, beautiful lawns and well-planned en-

vironments for granted. For example, could you describe the landscaping around the last business you patronized or the last

house you visited? If you answered no, don't feel alone. Most people couldn't describe the landscape unless it

A little bit o' Florida is the idea behind this landscaping. It's pleasing to the style of the house, it's neat and properly taken care of, and most of all it's unique to the neighborhood.

was so outstanding that it made a very big impression. People don't take Sunday drives to see lawns; they want to look at their neighbor's crops or his recent changes to his house.

Yet a well-planned lawn can be a complement to your house, and if so, then it probably is the only impression travelers will get of your home.

When you're done painting and decorating your house, paving the sidewalk and lane, and adding a mailbox, don't stop. Fences, bushes, trees, lush-green grass, flowers, and even rocks and fountains can add to your surroundings.

Last week we featured gardens, but your work outdoors only begins there. Spring is the time to clean up you surroundings, add some plants and make the outdoors a pleasant place for you and your family to be the rest of the year.

This week we are offering some helpful advice from the extension service and other specialists in the area of landscaping. Look for articles on lawns, pruning trees, plant use and even preparing lawn furniture.

The best advice on designing a landscape is don't over do, but don't under do.

So how does one find a happy medium? Lloyd Lapp, owner and

landscape specialist for Huoer Nurseries, suggests taking into account the look of your house, your general needs, elevations of the land, directions of wind and rain patterns, site of plants (northern exposure vs. southern exposure), shaded areas, and most of all, and easiest of all, what you like.

"We draw up a general blueprint for people to look at. We measure their house, find out what's of interest, take elevations and directions and all these things into account, show them our plan, and then plant."

"A small percentage of people who ask for our advice, know what they want. So we're glad to help and suggest things," he explained.

Lapp names lack of faith in garden centers as one obstacle to having a pleasing landscape.

"If people would only believe in their local garden center, they would have less problems. The people who work at these centers are trained to know landscaping; they are here every day, year after year. They know what works and what doesn't," Lapp said.

Huber Nurseries employs about 30 people to work in the garden center. Together they take care of 55 acres of nursery stock, the

(Turn to Page C14)

This pig reached 221 lbs. in just 150 days on the Agway swine feeding program. And that's not unusual.

It's no secret that feed is the single biggest cost in producing pork. That's why it pays to make sure your feeding program gets your pigs to market weight in the shortest possible time.

From Agway Squealer Pellets to Agway Pork Finisher, there's a farm-tested Agway feed nutritionally formulated for each stage of a pig's growth. Agway complete swine feeds provide all known nutritional needs, including energy, protein (amino acids), minerals and vitamins.

COMPLETE AGWAY SWINE FEEDS			
	18	40	30
Squealer Pellets (MX)	18	40	30
Pig Starter Pellets (PT MX)	18	35	45
Hog Feed (T 20)	14	35	50
Pork Finisher (T 20) 4	12	35	50

4 of 8 Agway swine feeds available
The farm tested Agway swine feed program can help make each of your pigs an ideal pig

And Agway also supplies a complete line of medicated feeds and supplements.

BACKED BY FEED TRIALS ON 1800 PIGS ANNUALLY.

Agway, in conjunction with other cooperatives, runs feed trials on 1800 pigs annually at the Agway Swine Research Farm in Lexington, Ill.

New feed ideas are constantly tested and proven, and the results incorporated into the Agway swine feeding program.

The ideal hog, as defined by the American Pork Congress, attains a weight of 220 lbs. in 150 to 165 days. It requires no more than 3 lbs. of feed per each pound of gain, and delivers a loin 30 inches long with a loin eye of 5 square inches.

In the past, Agway Squealer Pellets and Agway Starter Pellets were developed as the direct result of this program.

YOUR AGWAY SWINE EXPERT CAN TELL YOU MORE.

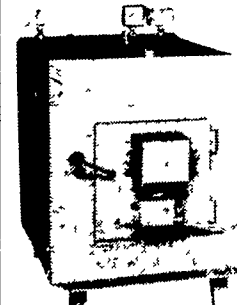

The latest research results and the details on the Agway swine feed program are available from your Agway Enterprise Serviceperson. Contact him through your local Agway.

Renovate your lawn

LITITZ—Your lawn may need a minor repair job or perhaps even a complete renovation this spring. Whichever the case, if seeding grass is involved, now is the time to do it. Grass seeded in early spring should be well established by the time hot weather and crabgrass arrive.

Grass that has survived the winter is turning green now, and damaged or bare areas in your lawn can be easily seen. The first step in renovation is to identify the cause of your lawn failure. Knowing the cause of failure, you should be able to develop a program that will prevent a repeat performance.

The first place to look for trouble is in the soil. Are the roots of surviving plants deep and well branched? Or are they restricted to the top two or three inches of soil? Is there a thatch layer which limits root development and prevents the deep movement of lime and fertilizer?

If a thatch layer is present it is an indication that the soil is acid and activity of microbes and earthworms is reduced. A soil test will provide important information about level of acidity and nutrition. Sometimes the top three to four inches of soil will be well limed, but the underlying soil will be acid. This may cause a "perched root system" and plants that are very susceptible to summer heat and drought.

Do you find an unusual number of grubs in the top two or three

inches of soil? If so, perhaps they have caused root pruning and grass damage. Does water stand in the damaged areas for several hours after a hard rain? If so, this could lead to poor soil aeration, which is death on grass roots.

Now, look above the ground. What are the problems you find there? There are a number of fungus diseases that can weaken or destroy a stand of grass. One of these, dollar spot, causes small dead areas in the lawn. These may be two or three inches in diameter. If present last year, you can expect more trouble this summer. The resting stage of the fungus is very resistant to environmental extremes.

If large areas of grass died out rather quickly last year, suspect chinch bugs. They like a warm, south slope. They may be there now, waiting for some tender young grass this year. They rarely cause problems on north slopes or under shade trees, so look for other culprits in these areas.

If crabgrass and other weeds took over the lawn last summer, it probably was because the grass was very thin and offered little resistance to the weeds.

After the likely causes of lawn failure have been corrected or at least recognized, it's time to move ahead with your renovation. Lime and fertilizer should be worked into the soil — if possible, to a depth of two to three inches. Fifty pounds of ground limestone and 15 pounds of 12-4-8 or equivalent

fertilizer should be applied per 1000 square feet of lawn.

If you have a thatch problem, be sure to work the soil well below the thatch layer.

Once the soil has been conditioned, you're ready to seed your lawn. A good all-round lawn mixture should include the following:

50 percent Kentucky bluegrass - use two or three cultivars, such as Baron, Bonniblu, Fylking, Adelphi, Merion;
25 percent red fescue;
25 percent Pennfine, Manhattan, or other fine textured perennial ryegrass.

Seed at a rate of three pounds per 1000 square feet.

If you need additional help trouble-shooting and renovating your lawn, call your county extension office.

Landscaping

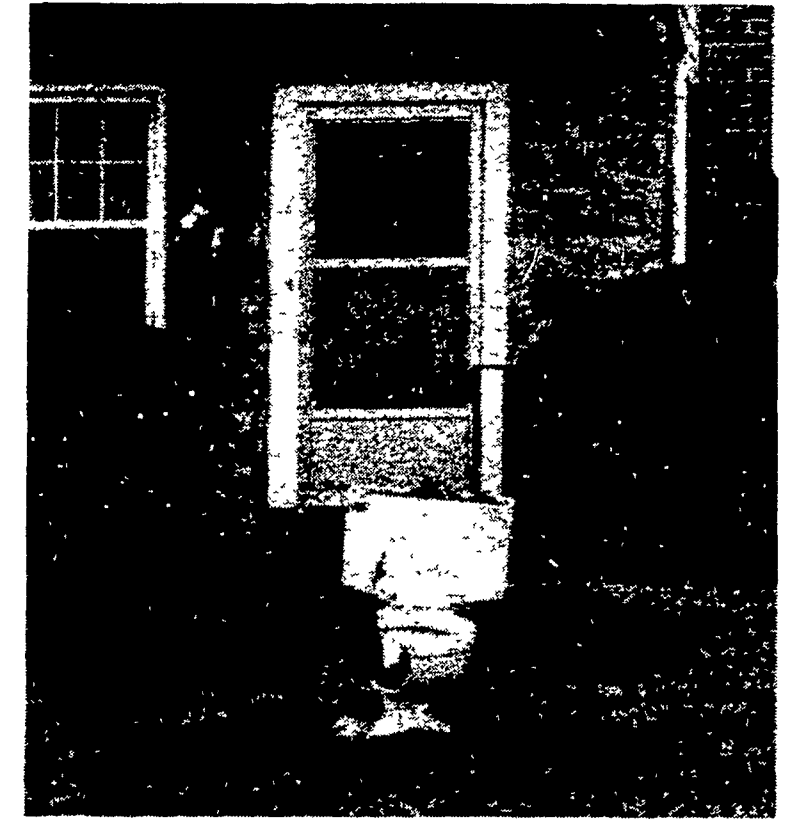

(Continued from Page C13)

customers needs and the garden store in front of the center.

But if you still persist in tackling the landscaping by yourself, be assured that most garden centers, like Huber's, will offer free helpful advice like this.

"One of people's biggest buying mistakes is to buy a bigger bag of grass seed at a low price and thinking they've received a bargain. Some types of grass offer more seeds per pound than others, so the size and the price can be deceiving. You must learn to understand the labels on grass seed packs, Lapp said."

Mulching plants after planting is a must. Lapp suggests mulching

Some people like to decorate their outdoors with personal items and, sometimes, conversation pieces.

once a year with spring being the most popular time.

"But check the mulch before the winter season. It should be 2 to 3 inches over the winter. A lot of plants can be ruined due to lack of mulching."

When asked what most people's mistakes are when it comes to planning landscapes, Lapp said, "blending the scheme in with the area."

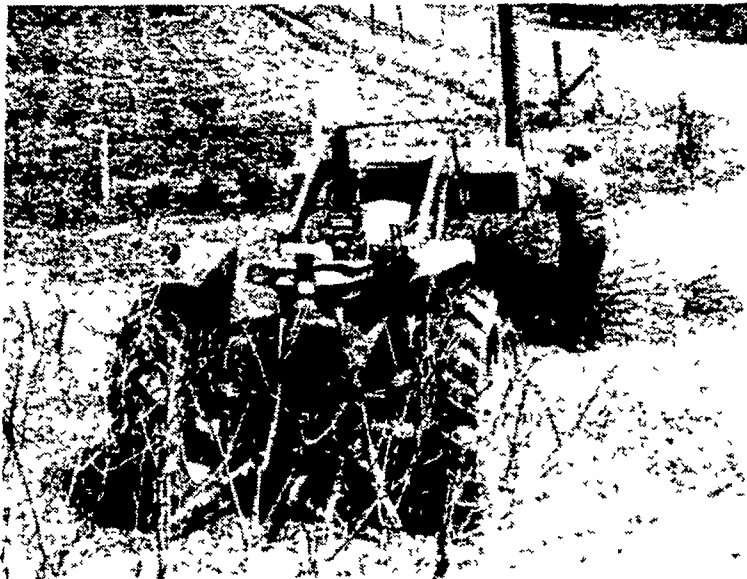

"And that's especially true of newer homes. New homes get done less and the few plants that are there are from general contractors who have agreed to stick in a bush or two. The home owners think they (the contractors) know best

and that the landscaping is finished. Not so."

Lapp sites Euonymus and Cotoneaster shrubs as some favorites but adds that rhododendrons and azaleas seem to be purchased a lot.

We plan our designs to fit the purpose of the area too. We are adding a lot of windbreaks these days. The best is white pine for windbreaks and sound barriers. They have long needles which are better to hold out sound than trees with short needles, he explained.

So if your problem is wind, rain, noise, a bare lawn or a lawn that needs redone, now is the time to plant and prune and take care of it.

Winter left its mark on most farms and this one is no exception. This farmer begins spring cleaning at his farm by clearing away some unsightly branches and shrubs. Some farmers could write a book, "One thousand and one uses of the tractor."

Put excess lawn water to good use

LITITZ — So your well has gone dry. Does it bother you to see the little rivulets of water leaving your downspouts and dribbling across the lawn? Wouldn't you like to have them end up in the underground water supply that feeds your well?

Many newer developments have on-lot berms; banks of earth around the lower side of property. They collect the increased run-off generated from the impervious surfaces; the roof, driveway and patio. The water is held there. Then released slowly so that it will not add to the other many little run-offs from your neighbors roofs to create flooding downstream.

You can build similar banks of earth on the lower side of your property. Instead of running a pipe through the bank to slowly release the water, dig several holes on the uphill side of the bank or berm. These could either be filled with large stone or left open. The water collected behind the bank will collect in the holes. It will then filter down into the underground water table to be available again. Even providing the water for your well.

The property owner must realize that different soils will effect the percolation rates from these on-site berms. A tight, poorly drained soil means that not as much water can percolate into the underground water table.

Residents in the new developments will want to make sure that their on-site retention basins have not filled up with silt during construction periods. This would reduce the amount of water storage and limit the amount of water available to percolate into the ground to replenish the underground water supply.

Another technique would be to build a cistern. Many old homes were built originally with cisterns in the basement. These collected rain water from the gutters on the roof of the house or barn. The water is soft, excellent for washing cloths and bathing. The soft water is nice for washing hair; none of the curds and dullness that comes from using hard water.

Drinking water, of course, would be obtained from other sources, unless there were no other sources. Then the rain water could be boiled or treated with chlorine to provide an acceptable water supply.

Islands in the Caribbean have been using cisterns for centuries to collect and store fresh water. In addition to the supply from roofs, residents would build large paved areas to catch additional rain water.

The large retention basins seen on many new developments today would be more difficult to accommodate for underground water recharge. They are designed to release the water rather rapidly so that the basin would be empty in case of another storm in the following two or three days.

Developers too, are forced to design basins in such a way that they do not infringe on the building area available to them in the zoned area. It may be that municipal officials should give some consideration to allowing developers the same population density on smaller lots in their developments so that the water recharge facilities could be included in the development.

Several developers are using porous pavement in their streets and driveways. The fine material is left out of the black top mix. This permits water to percolate through

the top surface. The sub-surface is constructed with fairly large stone. The stone sub-base provides storage for the increased run-off during a storm. The water will then percolate through the soil as the conditions permit.

Precast concrete paving blocks provide a hard surface to drive over and park on. The openings in the block let water trickle through. Grass will grow in the openings to give a lawn-like appearance. Paving block are excellent for excess parking around the perimeter of shopping centers, apartment houses, meeting places and the like. Porus pavement

would be used in the heavily traveled areas. Overflow parking could use the areas with the lattice blocks. A crushed stone area would also serve for overflow parking.

Engineers and officials are beginning to question the need for streets with wide paving. Especially streets that end in cul-de-sacs. A porous pavement area in the center of the street would carry normal traffic. A stone base or lattice blocks on the shoulders would provide passing room or parking area. The shoulder areas would support a vehicle and keep it out of any muddy conditions. These unpaved shoulder areas

would channel water back into the underground water storage.

"The water shortage points up the need to replenish the underground water supply from developing areas", Marshall Haws, conservationist said.

"It will take innovative thinking on the part of the property owner, municipal officials, developers and especially the engineers that design sub-divisions. We may even see the time when the surplus run-off from shopping centers and other impervious areas will be collected and sold to a nearby industry that has use for the water", Haws concluded.

Sights of spring can be seen on almost every farm as farmers begin to clean and rebuild before the long, busy summer sets in. These

farmers are gathered to build a fence along a well-traveled road in Bedford County.

TRIPLE "F"
FEEDS

**PUT YOUR HAY IN THE BARN —
DON'T LEAVE IT IN THE FIELD!**

HAY IV STABILIZERS

reduce heating & deterioration in storage lets you bale at 25% moisture to beat the weather, boost yield & retain feeding value

Hay stabilizer

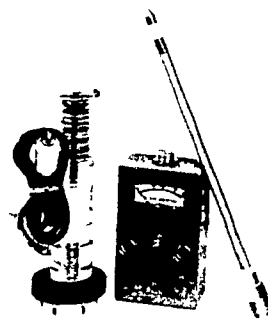

—boosts yield 15-25% — helps retain more crude protein — lets you bale a day or more earlier.

Putting hay up at 25% moisture, instead of the customary 15 to 18%, can increase your yield by up to 25%. That means an extra \$30-\$50 an acre from fields averaging over four tons (assuming \$50/ton hay)!

ACCURATE APPLICATION IS EASY... INEXPENSIVE

The Triple "F" applicator has been designed for simple, yet extremely accurate application of liquid stabilizer to hay. It mounts readily on any baler or stacker, with spray nozzles positioned 15 to 20 inches from the forage for full-width spray coverage as material enters the harvesting equipment.

More Than
Pays For Itself
In One Season!

Get lawn furniture ready now

LITITZ — If you are eager for spring to begin, now is the time to get your porch and lawn furniture ready for warm weather.

The first step in brightening most outdoor furniture is a good scrubbing with mild detergent and water. Some outdoor furniture, such as the all-weather plastic type, may never need anything else. Most kinds, however, require some specialized treatment to keep their attractiveness.

Wood Furniture: Redwood weathers well and has good resistance to moisture, insects, and decay from exposure. A good hosing is usually all that is needed to keep frames clean. It is good to apply a redwood stain at the beginning and end of each season. Screws and bolts should be tightened at the beginning and end of each season, too.

Kiln-dried, selected hardwood is used to construct some popular folding furniture, such as the director's chair. This is a folding armchair with a canvas sling back

and seat. An occasional hosing keeps hardwood frames clean. Follow this with an application of auto wax to protect the finish. Always tighten screws and bolts. Canvas replacements for backs and seats are available through mail order houses, department or specialty stores.

Aluminum: Good quality aluminum furniture can stay outdoors for several summers before showing signs of deterioration. If oxidation or rust has begun, it can be removed by brushing a jelly cleaner on the metal, then hosing the cleaner away after a few minutes. Protect the surface by spraying on a clear laquer. This finish won't last long outdoors, so you may have to spray several times during the summer.

If unpainted aluminum is just dull, dip steel wool in kerosene and rub the metal until it looks satiny. Then wipe with a clean cloth. Be sure the kerosene doesn't come in contact with straps, webbing or other upholstery material.

Color-coated aluminum can be washed with a mild detergent solution and rinsed. Apply auto paste wax to frames after cleaning.

Wrought Iron: Rust is the biggest problem with wrought iron. Rust will return unless you remove the rust pockets right down to the bare metal. To repaint, use a good exterior oil enamel.

Broken or loose wrought iron joints can be repaired with epoxy cement. It will hold the metal almost as securely as welding if you follow directions carefully.

Wicker Furniture: Wicker furniture should never be used outdoors, except on a sheltered porch or covered patio. Rain and

direct sunshine will make even the best quality look shabby in a year. The same is true of rattan, bamboo and other tropical materials.

Use the vacuum cleaner brush attachment to remove dust. Clean the furniture with a soapy sponge, then rinse and wipe dry. Rub on

liquid furniture wax for sheen and protection.

If you give your porch and outdoor furniture proper care, Cranston says, it should give you years of comfort, attractiveness and convenience.

Prune for production

LITITZ — Most people tend to do too little pruning because they are afraid of hurting production. To the contrary, pruning is necessary to produce a high yield of good quality fruit.

Pruning should be done at least once a year and most pruning is done while the trees are dormant in late winter or early spring. It should always be done with sharp tools to guarantee a clean cut and reduce the chance of injuring the remaining wood.

Pruning has three specific purposes. The first is to train the tree to a desired shape and size. Secondly, pruning helps maintain and grow healthy trees. Finally, pruning will improve fruit quality and yield when done properly.

Your job in the tree's first year of life is to select a permanent framework for production. With a little luck, three to five limbs will develop that are about the same size and evenly spaced around the tree. The main idea is to try and develop a "Christmas tree" shape.

What happens to the tree in the first year if you don't get any branches or only one branch? The only thing to do is cut off the one or two branches that occur and wait until next year to select branches. Trying to save those one or two branches will discourage branching later and make it harder to develop a well-shaped tree.

Of the three to five branches, the highest limb on the trunk, generally upright, is kept for a central leader or main trunk. If it is two feet or longer you should

head it back slightly to encourage branching in the next spring. However, it should be six to ten inches taller than the side branches.

It is important that the side branches have wide angles. If wide angles do not develop naturally, you can make limb spreaders. Use wood strips or a stiff wire with sharpened ends. Limb spreaders are used to force branches away from the trunk and develop a wide angle.

The angle should be between 60 and 90 degrees for a strong union between limb and trunk. Narrow angled branches will split under heavy fruit loads. Limb spreading can be done in the first or second year and should be maintained until the angle has developed properly.

In the second year of growth, try to develop a second tier of branches on the central leader. Cut back these branches so they are no longer than the tree top. These second tier branches should also have wide crotches so they will not crack under the strain of fruit production.

When the tree reaches the desired height, cut back the central leader, developing it into a weak side branch. This will discourage the tree from growing too tall.

When you head back a branch you encourage branching below it; this is how to develop secondary branches for fruit to develop on. If you cut back a branch to a strong point, the branch will become

LITITZ — Ecology-minded Americans are showing an increased interest in incorporating native plants into their home landscaping. While native plants have the advantage of being well-adapted to our climate and weather conditions, it is important to consider the local soil and exposure conditions in which they grow best.

The American holly, for example, does not normally grow in open fields, nor does the swamp magnolia inhabit dry, parched soils.

Many of our best native plants have been used in landscaping for years, including the flowering dogwood, American holly, and red swamp maple. However, many others are overlooked which could add interest and beauty to home gardens.

One such plant is clethra, or summer sweet. It normally grows in wet, shaded thickets along the edges of wooded areas, but will also grow in normal soil and full sun. Summer sweet blooms in midsummer with erect clusters of fragrant white flowers.

longer. If you cut it to a weak point, it doesn't grow quite as long.

This is how to control the length that a tree spreads and also the height. Remember trees must be pruned properly in the beginning to develop a good fruit production framework for the next twenty to thirty years.

Another excellent native plant is bayberry. No other shrub will tolerate more varied soils and exposures.

The fringe tree forms a small tree or large, multi-stemmed shrub that, in full bloom, is as attractive as a flowering dogwood, although quite different. It grows to a height of about 15 feet, a size well suited to home landscapes.

Another choice is the red choke

cherry, one of the best shrubs for fall fruit. In the wild it is often found in wet thickets, but will do well in any ordinary soil.

Although native plants can sometimes be dug up and transplanted from the wild, horticulturists recommend buying them from a nursery. They will be easier to transplant and establish, and this will also protect wild plants.

Use native plants for effect

Irrigation meeting on Tuesday

TERRE HILL — The Eastern Lancaster County Adult Farmer Program will conduct an Irrigation Meeting on Tuesday at 7:30 p.m., at the Union Grove School.

Henry Wooding, Penn State Extension Engineer, will be the speaker. Topics will include types of systems including sprinkle and trickle, planning an irrigation system, water management, cropping systems, irrigation economics and management of an irrigation system.

The 1980 drought reduced yields and quality of field, vegetable, and fruit crops in Lancaster County. As a result, many growers are able to see the value of irrigation. Being able to apply water at just the right time can increase yields of almost all crops during any growing season and provides insurance during drought years.

There are many irrigation

systems that can be adapted very well to Lancaster County agriculture. Wooding has years of experience with irrigation systems and will discuss how they can best be used to increase yields on area farms.

All interested persons are invited. The Union Grove School is located near Terre Hill on Route 625, 2 miles north of route 23. For additional information, call Donald Robinson or Robert Anderson, adult farmer instructors, at 445-5041.

N.J. Juniors plan Angus, P. Hereford Show

FLEMINGTON, N.J. — The New Jersey Junior Angus Association and the New Jersey Junior Polled Hereford Association have joined forces to hold their first Junior Preview Show, scheduled for May 9, 9:30 a.m., at the Flemington Fair Grounds.

Along with the conformation classes, there also will be showmanship and fitting competition, with the first and second place winners in the Angus division going on to represent the state in the National Showmanship Contest.

The show is open only to members of the Junior breed associations. Entry fees are \$5 per

person and the deadline for entries is April 17. Late entries will be \$6 a person.

Cattle must arrive at the Fair Grounds by 7 p.m. on May 8. A fun rodeo will begin at 8 p.m. that Friday.

Participants must supply health papers for out-of-state cattle, feed and bedding. And exhibitors in the showmanship and fitting competition must show and fit their own animals.

For more information contact: Chris Mayer, R1 Box 230 Glen Gardner, N.J. 08826, 201/832-7252; or Barbara Metch, R2 Box 325, Flemington, N.J. 08822, 201/782-8771

Lawns need a boost too

LITTITZ — It's spring again and time to give the lawn a boost. It really needs it right now, since many lawns are suffering from the accumulated effects of weather stress. There's also the question of how to repair damage to lawns caused by last summer's weed invasion.

The first step towards curing a lawn's problems is to get some food on it. Annual fertilization and adequate liming are most important for bluegrass lawns. The fescues are less demanding and will perform reasonably well on lower fertility soil.

Fifty pounds of ground limestone

per 1000 square feet every 3-4 years is a good guide to follow. Remember that acids are constantly forming in your soil as a result of natural processes. These include processes of living plants as well as those involved in the decomposition of dead tissue.

Fifteen pounds per 1000 square feet of a balanced fertilizer such as 12-4-8 should be a minimum annual application. Ideally this treatment should be applied in March and again in early September.

If the 12-4-8 contains some slow release ureaform nitrogen the growth response by grass will be more gradual and long-lasting.

This is very desirable, but since only 50 to 60 percent of this slow release material will become available during the first season you apply it, you should increase the rate to 20 or 25 pounds if the lawn wasn't fertilized this way last fall. It takes about three years for complete release of ureaform nitrogen. In the long run it may be the most efficient source of nitrogen you could use.

Wait until daily temperatures average around 60 degrees Fahrenheit before you try to tackle that weed population that did so well in your lawn last summer. By then weeds will have started to make some spring growth.

The Farmer Automatic 4 Deck Cage System

A system well devised and constructed for an uncomplicated and economical operation, modern and advanced, it will help you to gain your well deserved maximum return on your investment.

More layers per square foot of building space, more than any other system on the market today, 10,000 layers per 285 cage row

Lower maximum cage height, even lower than most 3 deck systems (6'8" max height, 4'6" max. width)

No special and costly floor or pit construction.

The 4 deck system can be installed in an existing building, without costly conversion or remodeling problems

Double or even triple your current building capacity.

Automatic manure removal, giving an odor free environment, healthier animals, more pleasant and healthier working conditions.

Higher bird concentration assures a comfortable, energy saving temperature during cold season

Summer ventilation is easier to accomplish because of the absence of ammonia and other fumes

Energy Saving Design

Only 3 fractional horsepower motors per row accomplish the automatic feeding, automatic egg conveying and automatic manure removal

Grange asks expanded vo-ag programs

Lancaster Farming, Saturday, March 28, 1981—C19

HARRISBURG — Pennsylvania State Grange Master Charles E. Wismer, Jr. is urging the State Department of Education to continue, and possibly expand the present vocational agriculture education program in the State's school systems.

This was the subject of a letter which Wismer wrote to Dr. Robert G. Scanlon, Secretary of Education, requesting that agriculture be made a top priority

in the vocational education program. His action was prompted by a recent meeting with members of the Department of Education, vocational agriculture teachers and House Majority Leader Samuel Hayes regarding the future of the vocational agriculture program, a growing concern to farmers in the state.

In past years, enrollment in vocational agriculture programs has dropped in comparison to other

fields. As a result, some schools have eliminated the program, many have made cuts.

Wismer said he would like to see more attention given to the program in this state because, "agriculture is the second largest industry in Pennsylvania," he said. "Its value to U.S. consumers is unequalled."

He added that education through vocational programs is essential because farming is becoming

increasingly complex, requiring more specialized skills.

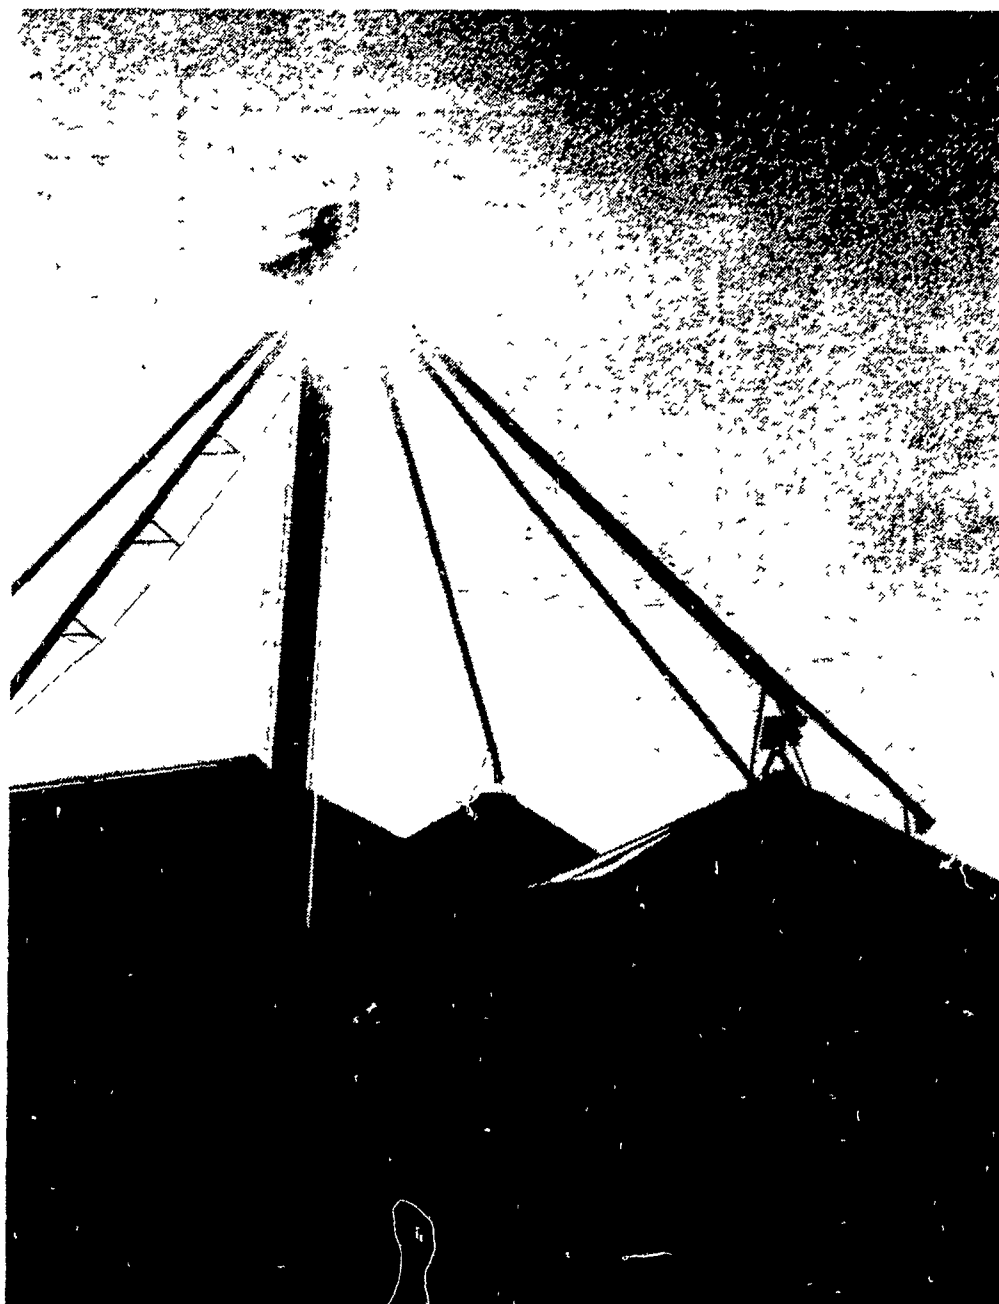

"There's so much more that a farmer needs to know now that he didn't 50 years ago," Wismer said. "He almost has to be a financial wizard."

The farming industry is becoming more like a big business, and in some areas, it's even becoming computerized. Young people who want to become farmers now need to have a

knowledge of marketing, finance, accounting, and much more."

Educating young people through the school system is the best way to help them to keep up with the rapidly changing research and technology in the farming industry, Wismer said.

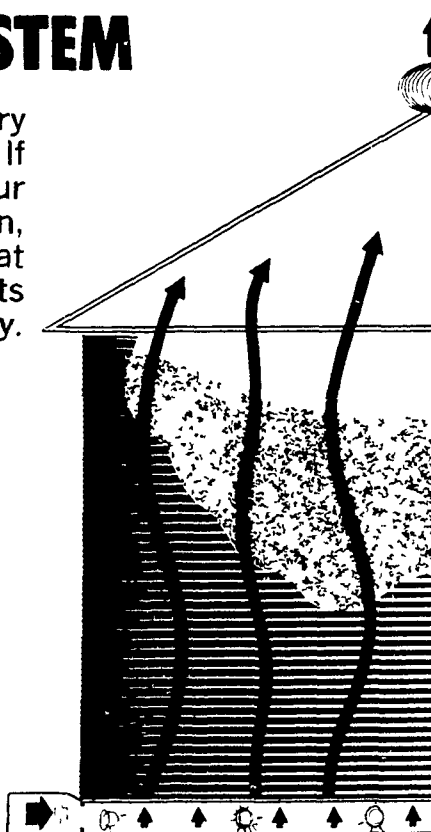

"The program provides good hands-on experience. It requires students to keep strict records, fill out regular reports and work on continuing projects."

TAKE THE HOT AIR OUT OF YOUR GRAIN DRYING PROCESS WITH THIS NEW SCIENCE-ENGINEERED NATURAL-DRY SYSTEM

Now days, you can't afford to heat dry grain from the field. It cost's to much. If you do it yourself or if you have your feed miller do it for you. In addition, research shows high temperature heat drying can burn out valuable nutrients from the grain. Reduce feed quality. Lower production.

That's why more and more farmers have turned to the Harvestall Chilling System from Advanced Ag Systems. These drying systems use mother nature's moving-air method to dry the grain in the bin. You simply use our computer test figures to determine the amount of air you must force up through the grain.

It's all computerized and farm tested so you can safely store your grain on the farm at harvest time. Then feed your own grain to livestock. Or sell at a more favorable price. No need to buy expensive fuel. No need to wait in line at the grain elevator. No need to sell grain at low harvest time prices.

To take the hot air out of your grain drying process. Install this science-engineered natural-dry system. For a computer print-out that shows how much air you must move through your size grain bin write to: Advanced Ag Systems, RD 2, Box 174, Elverson, PA 19520. Or Call (215) 886-9118.

Fire destroys Bedford County barn, silo

LOYSBURG — Fire caused approximately \$300,000 damage at this dairy farm in Loysburg, Bedford County, Monday when it destroyed two tractor trailers, the hay they carried, two of the four Harvestores, the barn, the milking parlor and four calves.

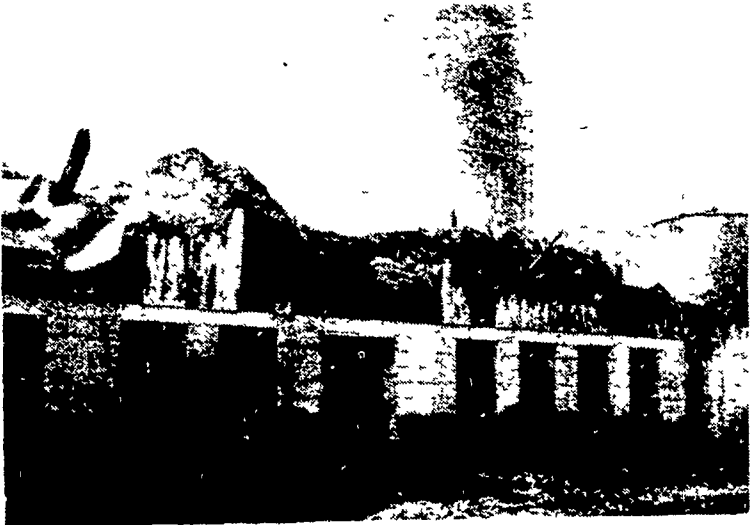

The fire which broke out Monday morning a little after midnight, was fought by five fire companies. Though firemen left the remains about 3 a.m., the Harvestores continued to burn. Builders from the Harvestore company were

called in to provide assistance in extinguishing the fire.

The owner, John R. Baker, farms with two of his sons, Mike and Ed. The Bakers' 134 Holstein cows were moved to neighboring farms in time for milking that morning.

An implement shed, a free-stall barn and two Harvestores were saved.

Electrical malfunctioning has been tentatively named as the cause of the fire —DK

Two Harvestores, barely visible due to smoke, were warped and destroyed by the fire. They continued to burn long after the firemen left the scene.

This tractor trailer and another like it were destroyed also. They each contained a load of hay.

Fire destroyed this milking parlor and barn. John Baker of Loysburg used this parlor to milk his 134 Holstein cows Monday causing damage close to \$300,000.

Shearing school dates listed

Berry breeder, 92, tells how to grow, grow old

GLENN DALE, Md. — At 92, famed strawberry breeder George M. Darrow is slow to give you the usual tips on how to grow "old." He promises to talk about that after he's had time to learn.

Mention berries, though, and the native Vermonter stretches his tall, lean frame nearly to his full height. That's a subject he knows well.

"When I first went to work for the U.S. Department of Agriculture in 1911," he said with a twinkle in his eyes, "they took one look at me and figured I was too green to keep in Washington. So they shipped me off to Oregon to study the better handling of cherries and berries. Then I made similar studies with citrus fruits in Florida."

Darrow recalls that the next assignment of his 46-year USDA career involved surveying the fruit crops of Kentucky, Tennessee and West Virginia to determine the best fruits grown there and why. For this assignment, he visited home gardeners and commercial growers who grew cherries, apples, pears, peaches, plums, strawberries, blackberries and raspberries.

From Darrow's point of view, he was broadening his education. His "teachers" lived on the sloping hills and up the hollows.

What these people taught Darrow, he said, was as helpful to his scientific work as his horticulture degree from Cornell University, his Ph.D. from Johns Hopkins University, or his advanced studies in plant physiology and genetics.

From the start, Darrow recalls, he got along well with the mountain people who had grown wise in the ways of plants while propagating wild fruits.

In the Kentucky mountains, a young man with a mule met me at the train station. The mule was to carry me and my luggage," he said.

"We went over a mountain and

down into a valley, where I met a big man at the crossroads. It was said that when there was trouble in those parts, he administered justice. He would even go into court with people in disputes. Then he would take the people home. He settled things right.

"After about two years in those mountains, I was directed by the USDA to write a farmer's bulletin on each fruit. I did the most on strawberries. I told about the strong and weak points of each variety."

"I also wrote about strawberries on the Pacific coast...everbearing strawberries...all different kinds. These bulletins came out in 1918-19 and have been revised from time to time over the years."

With the advent of World War I, Darrow joined the Army in June, 1918, and went to camp in Georgia, where he still found time to experiment with plants. In August, 1919 he left the Army and got married a few days later.

By this time, Darrow was a recognized authority on small fruits. His writings covered raspberries, blackberries and dewberries, currants and gooseberries.

"I surveyed cranberries that first fall after I got married," he remembers. "I had been in Oregon and Washington State. My cranberry travels also took me to Massachusetts, New Jersey and Wisconsin, the main areas where cranberries were grown."

Then the prolific scientist began the work that was to make his name virtually synonymous with the word "strawberry." Following his military years in Georgia, he borrowed part of the greenhouse of an associate in 1919 and began breeding in quest of superior market and garden strawberries.

Darrow's long and patient efforts literally bore fruit on USDA grounds first in Glenn Dale and later at USDA's agricultural research center in Beltsville.

"I could take you to the spot

where we picked some early strawberry crosses in about 1921 or 1922," he said. "It's where the Glenn Dale golf course is now. We bred bigger, better-tasting, disease-resistant strawberries there. These were especially needed by the preserving industry, which was having trouble using berries available at that time."

"One of the first crosses we ever made struck it good. It was excellent for making strawberry jam. We named it the Blakemore after one of the most outstanding people in the strawberry preserving business. He was instrumental in cleaning up the industry."

"For about 30 years, the Blakemore was the leading strawberry variety in the country, mostly in the South," he said.

Since surpassed in some areas by bigger-fruited types, the Blakemore still is a major variety in Arkansas and Oklahoma. As the tastes and needs for strawberries changed, Darrow and his associates originated new plants.

USDA moved its fruit research, including strawberry breeding, to Beltsville, Md., in 1932. The first strawberry plots were on heavy soil and many plants died from a disease which later was found to be widespread throughout the northern half of the United States.

Darrow and his co-workers devised screening techniques for the disease, which involved growing the seedlings in a cool greenhouse in beds of wet, disease-infested soil. This procedure proved very successful as a means of eliminating susceptible seedlings and became a routine part of the breeding program.

In the 1940's the importance of virus diseases in strawberries became widely recognized. Transmitted mainly by aphids, the disease infected many plants even before they produced runners. The battle against the disease and aphids began.

Under the leadership of Darrow and others, strawberry growers propagated "clean" plants, grew them in isolation and controlled aphids by systematic spraying.

The result: plants with stronger vigor and higher productivity as well as more berries at the grocery store.

Describing all of the honors that have come to Darrow for his scholarly achievements would fill many pages.

Recognition has come to Darrow from many places in government and education as well as from the small fruit industry. Before he retired in 1957, former Agriculture Secretary Henry Wallace termed Darrow "one of the great strawberry experts of the world."

North Carolina State University honored him with an honorary Doctor of Science degree for his contributions to agriculture in the South.

Darrow was in the first class of 'Fellows of the American Society for Horticultural Science' and has been awarded the Wilder Medal, given each year by the American Pomological Society to an outstanding contributor to American fruit varieties. In recent years, the North American Blueberry Council named him a "Pioneer of American Blueberry Develop-

ment."

Each year, the American Society for Horticultural Science honors the author of the best paper written about small fruits culture. The honor is called the "George M. Darrow Award."

People sometimes see Darrow in different ways. When an exhibit on his work with strawberries opened at the National Agricultural Library of the USDA's Science and Education Administration, a friend commented that Darrow should be cited for his work with daylilies rather than for his strawberry research.

"No," said another. "Bamboo-growing is what he does best. His home in Glenn Dale is known as 'Darrow's Grove.' The first bamboo he planted came from China. Most of his bamboo grows 30 feet tall and is good for decorating a home or business, inside and out."

"Not so," said a third. "The new types of cranberries and blueberries he developed while with the USDA are the greatest."

Perhaps a more vivid image of the total man is mirrored in a dozen or so pairs of shoes in Darrow's bedroom. None are styled for black tie events. All were made for walking in the fields where food plants grow.

FFA launches bologna project

LEBANON — The semi-annual project of the Annville-Cleona Little Dutchman FFA Chapter — the production and sale of Lebanon sweet bologna — has been launched for this year.

Production of the bologna took place on Tuesday at Bomberger's Bologna, Inc., Lebanon.

It is expected that sales from this year's production will top the 3000 pounds sold last fall and this spring.

The bologna project was started in 1964 with the slaughtering of a

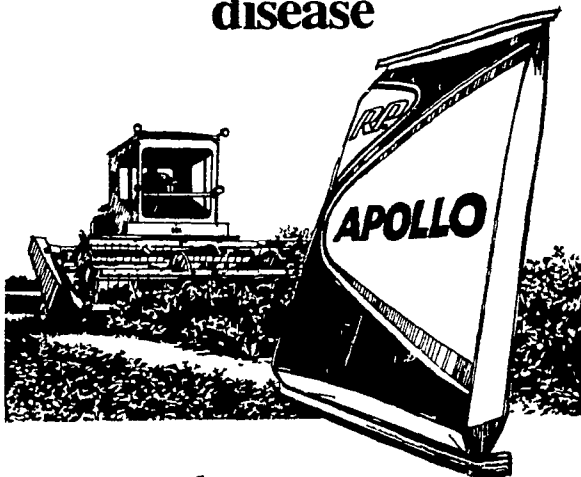

steer by the chapter in the high school vo-ag shop. Sales totaled 300 pounds the first year — just one-tenth of the present level of sales.

Following the adoption of meat inspection requirements by the state, the Little Dutchmen Chapter project was moved to Burkholder's Bologna, Inc. When this plant was closed, it was moved to Bomberger's.

The Chapter's Bologna Committee includes Steve Hostetter, chairman, Jeff Reigel, Tim Theal and Henry Martin.

ROHRER'S

Your first choice
to beat "wet foot"
disease

- High Resistance to Phytophthora root rot—"wet foot disease"
- Very high yield potential
- Excellent winterhardiness
- Rapid recovery after cutting
- Greater resistance to anthracnose, pea aphids and leafhoppers than most other alfalfas
- Available with GroZone™ Seed Coating

Distributors for RP forages from NAPB

(North American Plant Breeders)

Ahead in yields
and anthracnose
resistance.

- Fights "summer decline" caused by anthracnose
- Proven yield leader

How these Maryland farmers preserve soil, clean water

RISING SUN, Md — What do Ralph Miller, Carl Stafford, Al Miller and Henry Mason have in common? Besides being Cecil County farmers, each is also participating in a special program designed to control agricultural pollution in the Little Northeast Creek watershed.

Last Wednesday, they put their efforts on display.

Forty-six people took a whirlwind tour of these four farms to see a variety of best management practices already installed under the special project. The tour was sponsored by the Cecil Soil Conservation District. The purpose was to acquaint farmers with the program and encourage them to sign up.

The Little Northeast Creek watershed, one of two special project areas in the state, received

\$175,000 in special Agricultural Conservation Program funds to be spent over a three year period. The money is being used to help farmers defray the cost of installing best management practices to control sediment and animal waste pollution.

The Agricultural Stabilization and Conservation Service is administering the funds. The Cecil SCD and U.S. Soil Conservation Service are providing technical assistance in designing measures.

First stop on the tour was at Ralph Miller's farm to see an animal waste management facility under construction. The system consists of a storage pit for solid manure and a series of curving field diversions to handle the liquid waste from his milking parlor and wash house.

According to Dave Wilson, SCS district conservationist, the system will provide 120 days of manure storage from about 100 cows.

Not only will it eliminate the need for daily hauling, the system will help keep the wastes from polluting a nearby stream.

"The polluted liquid", Wilson says, never reaches the end of the diversion. The solid wastes will be hauled out and spread on the land as fertilizer.

Another waste management system, a rock-lined waterway, diversion, and a "stilling" basin were spotlighted at the Stafford farm. Because of the steep slopes, said Wilson, diversions and grass waterways are the two most common erosion control practices used in the county.

The stilling basin, however, is somewhat unusual for farmland. The basin, a 15-foot square hole dug three feet below the end of a road culvert, is lined with rock. It catches and holds the water that rushes out the pipe, dissipates its force, and keeps it from gouging out a gully.

Stafford signed up for a long-term agreement which guarantees him cost sharing for a number of practices over a six-year period.

Al Miller, who farms with his father Grove, has a four-year LTA. Miller showed the group how a diversion helped solve an erosion problem on his farm. The 18-inch high diversion was installed about one-third of the way from the top of a hill, breaking the path of the

runoff right where it would begin to cause gullies.

Miller then used strip cropping, plowing parallel to the diversion, to reduce erosion even more.

According to Wilson, contour strip cropping can cut erosion by about 75 percent.

"Al's only losing about two tons of soil per acre per year in this field. If you're losing less than four tons, you're doing good," he said. "But, I've calculated some fields in Cecil County at losing 31 tons per acre."

In fact, many farms in Cecil County have already lost about half their topsoil since the forests were first cleared. Most have only 6 inches of top soil left, he said.

At the Mason's farm, a grass waterway was used to replace a gully and help funnel water into a spanking new pond. Under the special project, Mason was able to receive cost sharing on the construction of the pond which is no longer available under the normal ACP program.

A water quality monitoring station has been set up on the west branch of Little Northeast Creek to determine what effect these measures are having on stream quality.

Brad Walker, a biologist at Cecil Community College, is conducting the sampling program. Besides stream flow, he is testing for suspended solids, fertilizer residues including nitrogen and phosphorus and bacteria.

Walker said he hopes to have two years' worth of data collected by

next July on which to base his analysis.

He said he will also have data from two or three portable monitoring stations to monitor the quality of runoff from specific fields where conservation practices have been installed.

Mollie Ivins, ASC county executive director, encouraged farmers in the watershed to sign up for cost sharing. "There's \$103,000 left and this is the last year of the project," Ivins said.

"Of the 70 farms in the watershed, 18 have done some conservation and 13 have been adequately treated. That leaves 39 farms that have done nothing," she said.

Under the special program, the government will pay 60 to 75 percent of the cost of installing certain best management practices. Most of the vegetative measures, such as pasture and hayland planting, receive 60 percent cost sharing whereas erosion control structures receive 75 percent.

If there was anyone still unconvinced about the value of conservation measures at the end of the tour, Philip Johnson, named conservation farmer of 1980 by the Cecil SCD, set them straight. A strawberry and hog farmer, Johnson told the crowd that he was sold on conservation.

"It pays, especially on a high value crop like strawberries. Every bucket of soil that goes down the creek is money down the drain," he exclaimed.

Completes agronomy seminar

District Sales Manager Tim Markovits, R12 York, recently attended a seminar at Pioneer Corporation's Eastern Division headquarters, Tipton, Indiana. All facets of seed corn research, seed production, and agronomy services were covered in detail. Eastern Division President Robert Wichmann, left, is shown awarding Markovits a certificate of achievement earned during the period of intensive study. Lookington is General Sales Manager Lewis Parker, right.

Drivers to be honored

PHILADELPHIA — Pennsylvania Manufacturers' Association Insurance Company will honor Pennfield Corporation and its subsidiaries for outstanding employee driver safety records.

The awards will be presented to the drivers during Pennfield's Safe Driver Awards Banquet. The banquet will take place at the Indian Springs Golf Club in Lan-

disville tonight.

Mike Horn, fleet manager, will present the awards to each driver from Pennfield and its GL Pennfield, DE Horn and J Brame Witmer subsidiaries. Also attending will be Robert Graybill, president of Pennfield; and Thomas M. Troutman, loss prevention representative for PMA.

Innovative conservation idea possible for Pa.

LANCASTER — Representatives of the Lancaster County Conservation District traveled to Carroll County Maryland last fall to look over some new ideas in controlling storm water and erosion.

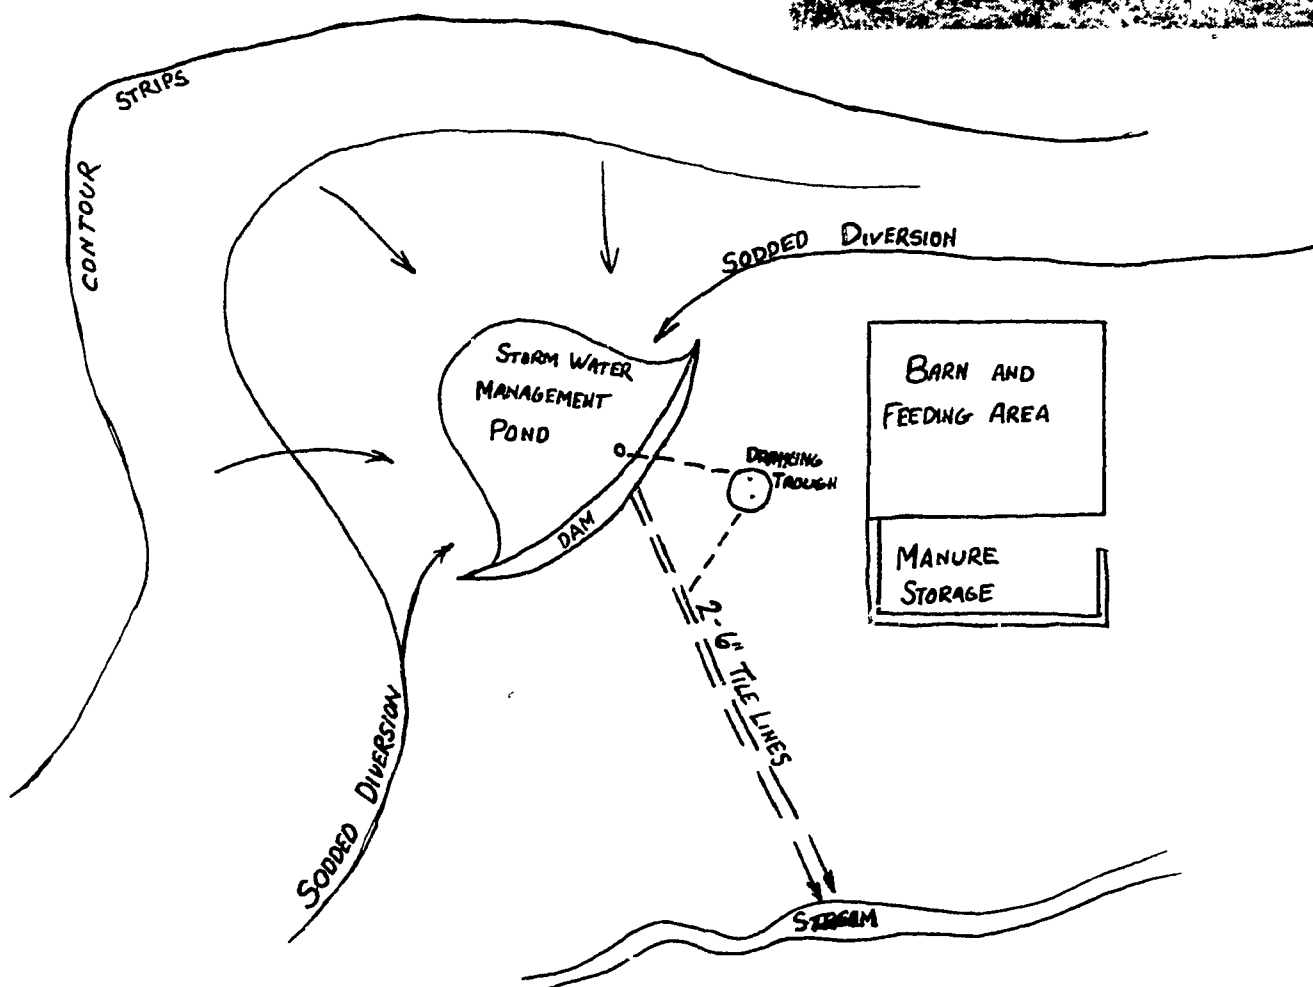

At the James Stonesifer farm, the directors studied a conservation system they say has "possibilities for Lancaster County". It involves a storm water runoff holding pond, which collects the excess surface water from 35 acres of cropland. Equipped with a pipe, the pond outlets the collected water at a safe rate. The pond is designed to store the runoff of a "5-year storm" intensity.

According to District Administrator Tom Johnston, benefits of the system are:

- sediment control;
- farmstead and barnyard protection from surface water,
- clean water is separated from manure at the barn and is carried to a stream through two 6-inch pipes;
- provides a source of drinking water for livestock,
- offers some fire protection; and
- control storm water and stream recharge affecting downstream landowners and users.

Looking downstream toward the farmstead of James Stonesifer, Carroll County, Maryland, contour strips wrap around a holding pond, designed to collect runoff from a 35 acre watershed. The pond intercepts the surface water, stores it for a determined length of time, and then outlets it to a stream. Some of the pond's water is piped to a water trough for livestock before it heads back to the 6-inch lines carrying it to the stream. This practice helps keep the "clean" water from running through the barnyard. See diagram.

Fulton Grange sets April schedule

OAKRYN — Fulton Grange No. 66 held their regular meeting March 23rd, 8 p.m. at the Grange Hall on Oakryn. The Master, Thomas Galbreath, conducted the business meeting when the Charter was draped in memory of Mrs. Susan Fite.

The Women's Activities committee was instructed to purchase new window curtains for the Grange hall kitchen. They will be in charge of the annual turkey supper April 4, which will be served family style from 4 to 8 p.m. Tickets will be on sale at the door and take-outs will be available.

The women's activities committee will also serve on the hospitality committee April 11 when the Lancaster County Pomona Grange will meet at 8 p.m. in the Grange hall.

The first four degrees will be conferred Saturday, April 25, 7:30 p.m. The tour committee reported a few seats are still available for the bus trip to Tangier Island, May 23.

The Lecturer, Mrs. Jesse Wood, presented the program which opened with group singing "There's No Time Like The Present." Mrs. Donald McCallin gave a reading "Grandma Tells It Like It Was." The Lecturer handed out stamped envelopes and had everyone write the state legislators concerning the Governor's not increasing agriculture's appropriations in this year's budget while increasing other departmental appropriations as much as 17 percent.

Mrs. Wood conducted three question and answer games. Mrs. Richard Edwards read a number of jokes and sayings after which Mrs. Cecil Campbell gave a reading "Three Rooms And A Path."

Youth Night will be observed at the next meeting April 13 by filling officers' chairs and presenting the program.

There's more than one way to learn in FFA

BY DICK ANGLESTEIN

LAMPETER—"Learning to do; doing to learn..."

This well recognized opening to the motto of the Future Farmers of America is taking on new and deeper meaning at Lampeter-Strasburg High School.

At the core of this new meaning is a unique learning experience being shared by a vocational agriculture student and two teachers.

Their shared experience illustrates that, just as the role of farming is changing in these times of constant agricultural evolution, the way in which the farmers of tomorrow become prepared for their future must change, too.

And in a more practical sense, the cooperative involvement of the three, which goes above and beyond the customary vocational agriculture program, is making the learning process meaningful to the student, who readily admits that it is the one thing responsible for keeping him in school and better preparing him for his future in agriculture.

The student is 17-year-old John Harnish, who has a learning disability which prevents him from participating in a conventional school program of learning with its customary emphasis on reading and writing.

The teachers are Dick Yencer, vocational agriculture teacher and FFA chapter advisor, and Cris Horn, who works with students having learning disabilities.

"Essentially what we have done is redesign the educational mold to fit the individual learning situation of the student," the teachers explained.

Wherever possible, John's learning experience concentrates on individual and classroom lectures, with particular emphasis on his area of primary interest in agricultural mechanics, and responses, including tests, in oral rather than written form.

This has meant extra effort by the student and teachers alike, but it has resulted in definite, tangible dividends.

At the Garden Spot Chapter's recent annual FFA banquet, John joined classmates in receiving his Chapter Farmer Degree and was presented with a proficiency award in agricultural mechanics.

But the true worth of this shared commitment of student and teachers goes well beyond such tangible values.

In the words of the student,

"School has been a lot better for me since I've been in this program in high school during the past year," John said.

"If I just had the regular classes, I'd probably not be here."

"But I think the whole agriculture program is better. Now, we have someone who cares about it."

Yencer, who came to Lampeter-Strasburg last July with a varied agricultural background, finds he's acquiring a new personal satisfaction from the learning program.

"I found that I had another need as a teacher beyond the customary academic contact in the classroom," he said.

"Not many people know it but I have a hearing problem and I guess I've always been sensitive to similar problems of others, which might affect the learning process."

"Working with John has put more enjoyment into my teaching day. I now have more variety in the student-teacher contact, along with more meaning."

And Cris Horn adds what the learning program has meant to her.

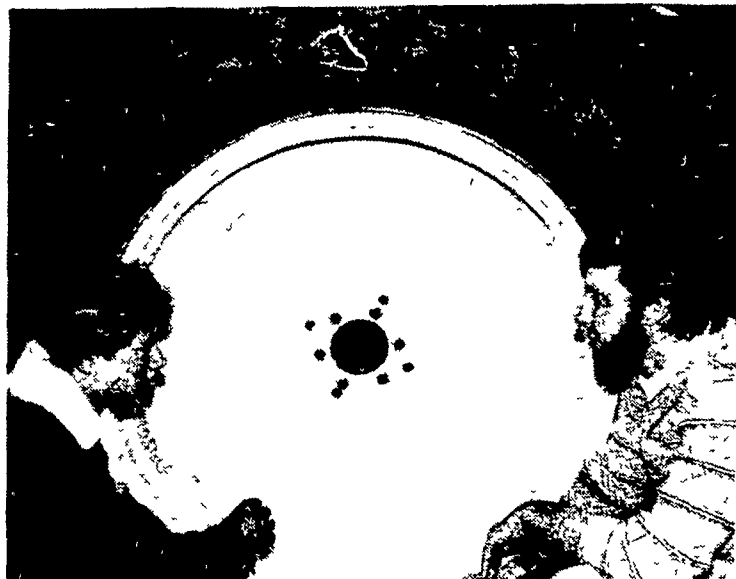

"It has been gratifying to see how the program has made school relevant to John," she said.

"If John must give a report, he gives it orally to me. I must admit I

Discussing individualized learning program being conducted in vocational agriculture department at Lampeter-Strasburg High School are, from the left, Dick Yencer, vo-ag teacher and FFA chapter advisor; John Harnish, chapter

member who recently received proficiency award in agricultural mechanics; and Cris Horn, teacher who works with students with learning disabilities.

Student John Harnish and vo-ag teacher Dick Yencer look over rebuilt wheel of Farmall BN tractor that features solid rim of case-hardened steel made from old circular saw blade.

get a bit lost when John talks about bevels, shearbars and the like.

"When we studied business letter writing, the program concentrated on obtaining equipment brochures from various machinery manufacturers."

"In these ways, John is building his vocabulary of words and terms he'll be using the rest of his life."

Yencer, whose agricultural background has ranged from work on a dairy farm and in AI to helping students build rice threshers at an agricultural high school in Indonesia, believes the program for John has demonstrated the need for flexibility in the learning process.

"John has shown that although he has trouble with reading, he can still excel in other areas of learning," Yencer explained.

"But both teachers and the educational program must be flexible enough for this excellence to be expressed."

"I remember an assignment in which each student gave a report on animal diseases. John gave his report on machinery operation, specifically on how a chopper works."

"John had his own diagrams and schematics and gave a very meaningful and complete report to the class."

While a textbook may lack learning relevancy in John's hands, there certainly is no lack of meaning in the hands-on learning process that might involve a wrench, welder, cutting torch or any other tool so necessary in today's mechanized agriculture.

"It's out there in the shop that our teacher-student contact really came out," Yencer said.

"Probably, it was our mutual interest in machinery and just how mechanical things work."

Both on the family farm along Lampeter Road and in the high school ag shop, John has worked on a variety of projects in agricultural mechanics.

One such project is a rebuilt Farmall BN tractor, whose glistening red and white exterior rivals the finish of models now found in dealer showrooms. John and his father built up the tractor so that it could be used for tobacco spraying. The project included larger wheels to provide clearance over plants, special tanks and wheel guards.

The rims for the larger wheels, which came off an Oliver, actually are case-hardened circular steel saw blades. The teeth had to be cut off with a torch, along with hub and lug holes of precise clearance. John performed the finishing touches of cleaning it up and repainting it in the ag shop.

Another of John's projects involves the fabrication of portable seats, which he is making for use on the BN and other equipment. John patterned their design after another seat and drew his own blueprints to scale to make them. Also, at home, he and his father are building a feed wagon for use in the chicken house, complete with features such as moving flaps in front of the wheels to protect the birds.

The specialized learning program, devised by Yencer and Horn, is being expanded to another student, who has a different type of learning disability.

"The most important thing that has been shown, Yencer explained, is that there are a variety of ways to learn."

One standardized program just doesn't fit all students.

Thus, such a program has injected new meaning into the

This is the Farmall BN tractor that John Harnish helped to rebuild on family farm and then cleaned up and repainted in ag shop at Lampeter-Strasburg High School.

definition of learning found in the first couple of lines of the FFA motto.

And, the results of the program

are adding special meaning to the last line of the motto that says:

"Living to serve."

Lost forever to farming

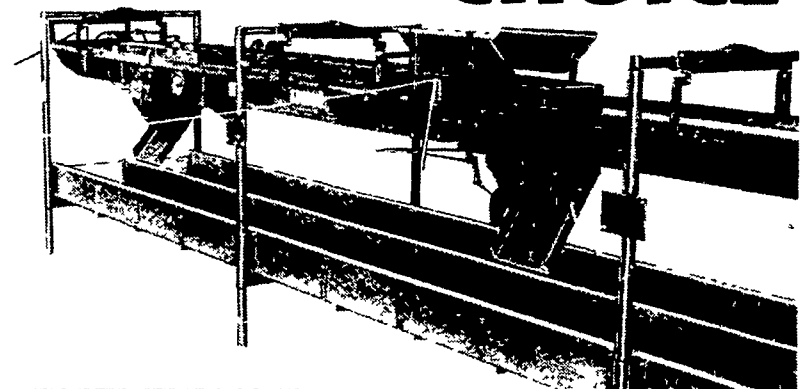

This plot of land in York County between Hanover and Spring Grove is another section of farm land lost forever to agriculture. Centennial Park will sprout houses like those to the left, rather than grain to fill barns like the one in the background.

On being a farm wife - And other hazards

Joyce Bupp

With the ushering in of Spring, Nature again promises triumph over the drabness of the past months with re-runs of some of the most striking and beautiful scenes from our farm-photo-album of seasonal memories.

Some morning soon, there'll be a glance at that favorite action shot, cows released to pasture freedom after months of barn confinement.

Heels flying, tails raised stiffly into the air, the normally sedate and solemn matrons of the dairy herd will cavort down through the fence lot interchanges, like so many lambs romping around the pasture

Later, they'll shape another photographic memory, a random pattern of black and white hulks dotting the greening grass, silently meditating as they rest and chew their cud.

Other pictures will brighten the back yard, where the forsythia bushes robe their cascading limbs in sunshiney blooms, vibrant yellow accented with the pale green of emerging tender leaves

We've already taken a sneak peek at this promised picture, with a cut glass pitcher on the dinner table holding a handful of the forced yellow blossoms and their companion mellow gray pussywillows

A study in color contrasts will be framed by the kitchen window, where the green and red of tractors can be seen slicing a near ribbon of dark brown, freshly-plowed soil, all against the background of a blue sky feathered with white clouds.

Like the children's favorite scratch-n-sniff pictures, the scent of earthiness from the fresh furrows will stir our senses to grasp a handful of the crumbly

moistness and inhale the smell of life it exudes

Mustache, the favorite mother cat, is the picture of contentment as she snoozes on the straw mulch beside a cluster of yellow and purple crocus.

Soon, she'll paint another page in our album of Spring picture memories, the now ballooning belly giving way to an irresistible furry mound of tiny paws heads, and tails.

And marching out through the garden comes the portrait of the proud parade leader, the gray bantam, constantly clucking orders to an errant band of a half-dozen fluffy balls all headed in different directions.

Such are the scenes that surround us in this season of anticipation and hope, repeated year after year, and yet ever new in the promise and joy that such beauty brings.

York area PCA manager retires

BY JOYCE BUPP
Staff Correspondent

YORK — Robert E. Stover, general manager of the Production Credit Association of York, will retire this week after 34 years with the agriculture lending cooperative.

In his honor, the PCA has donated \$2000 to the 4-H Clubs of York County, Inc., for the establishment of a trust fund toward the upkeep of the 4-H Center at Bair.

That check was presented to Stover for the 4-H program during a surprise retirement party given at the 4-H Center by his family, friends and business associates last Saturday.

"We have something good here — here we have a building to help young people learn to be better citizens," Stover said in his thanks to the Association. "Where could you put a dollar better than where it will help young people?"

The York County 4-H Center was built in 1970, and Stover has served on the center's board of directors since its inception. He was one of the original promoters of the concept of a trust fund, which would be used to help finance the maintenance of the Center. Electricity, for instance, for the Center costs up to \$350 per month, and the annual heating bill runs some \$6000.

A trust fund will also be the vehicle for memorial funds and donations toward the ongoing program of the 4-H clubs of York County.

Stover received a plaque from County Agent John Smith, on behalf of the 4-H Clubs, "In recognition of your support, encouragement and service to our 4-H program."

The Pennsylvania Association of Farmer Cooperatives, an organization of some 60 agriculture cooperatives in the state, also recognized their former board member of many years. The PAFC presented Stover with a gift of marble bookends, fashioned from Donegal Marble, which is quarried in Lancaster's Donegal Township, near Elizabethtown.

Stover's career with Production Credit began when he was hired as a loan officer for Carlisle Production Credit, later changed to the present organization when the main offices were relocated at York.

"We handled about 400 accounts, with a volume of \$66 million, and an interest rate at six percent," he remembers. "Our largest single loan was in the amount of \$20,000 for the purchase of steers."

The farm cooperative could not

advertise in its beginning, and Stover relates that the organization was frequently confused with the Farmers Home Administration and other government agencies, even by some of the area's banks.

That same Association, serving Adams, Cumberland, Franklin, Fulton, Perry and York Counties, today handles over 900 accounts, with a volume of \$28 million in loans.

In addition to his 4-H and farm cooperative leadership activities, Stover is a director of the Soil Conservation District and serves on the executive committee for the York County Agriculture Extension Service.

For the past 30 years, he's broadcasted a bi-weekly "talk" program about agriculture and credit on radio station WGET, Gettysburg, and will continue with the station in that capacity.

Stover and his wife Lucille reside at 1649 West Philadelphia Street, York. They have two children, Marilyn, now living in Yemen, Arab Republic, and Larry, York, and two grandchildren.

Although the PCA manager has no special plans for his retirement, he admits he's looking forward to not having to go to the office every day.

"When God closes one door, he opens another one," Stover figures. "I'm just waiting for the next door to open."

York Production Credit Association president, Rolla Lehman, center, presents a check for \$2000 to Chris Shive, right, for the 4-H Clubs of York County. The check was given

in honor of PCA's retiring general manager, Bob Stover, left, toward the establishment of a trust fund for the 4-H Center.

Penn's Agri-Women to discuss land issues

HERSHEY — April 7 marks the Spring Meeting day for Penn's Agri-Women. It will be a time to delve into some major issues, make by-law changes, compile state resolutions for the year and renew the fellowship of the group, according to Gail McPherson, president. Meeting at the Hershey Convention Center 9:30-3, the women will be considering chemical, trade and land use issues.

Registration will open at 9:30 followed by devotions and a recap of her Australia-New Zealand trip by immediate past president Ethel Gross. A short business meeting will begin with the president's report at 10.

"People vs. Pests" will open the issues segment of the program featuring Donald E. Rosen, Supervisor, Product Registration,

E.I. DuPont de Nemours & Company. The agrichemicals marketing division expert will show a film and focus on the subject of state legislation that can have a negative effect on the use of crop protection chemicals.

Luncheon speaker Dave Poorbaugh of Poorbaugh Grain, Inc., Lancaster, will be updating market trends with his topic, "Will the Bulls or the Bears Rule Trade?" His objective is to stimulate the agri-community into a position to gain more control and profit in the marketplace.

"The Land Use Dilemma" falls into the realm of expertise for William Conn, Senior Planner, York County Planning Commission. Admitting problems, Conn stresses potential in the prime farmland preservation predicament.

Report of the resolutions committee under vice-president Mary Brown will close the meeting setting objectives for 1981 action in education, public relations and

legislative change.

Make reservations through Treva Markey, 2710 Joppa Rd., York, Pa. 17403, or call 741-3569, or 382-4878 by April 2.

Grain film available

LITITZ — Actual success stories of grain shippers who have altered their shipping methods to reduce costs and provide better service are documented in "Green Light For Grain," a new 16mm-color motion picture available on free-loan from Modern Talking Picture Service.

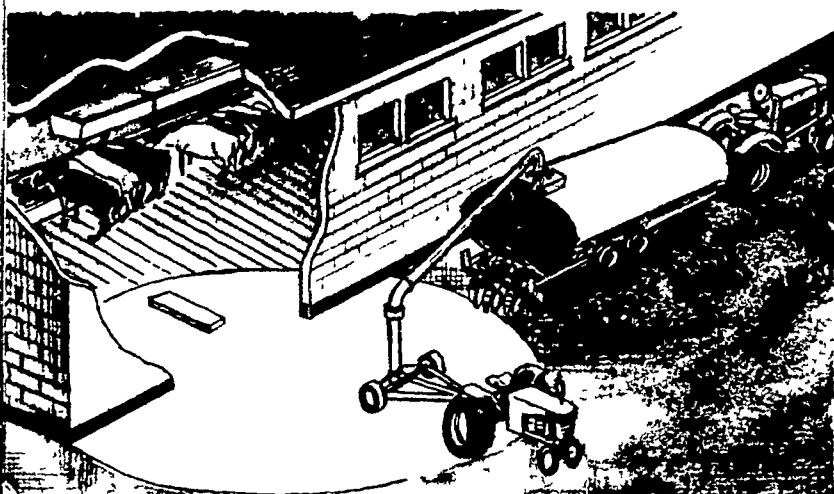

Produced as a service to the agriculture industry by Pioneer Hi-Bred, Inc., "Green Light For Grain" draws on the experience of more than 37,000 farmers and grain elevator operators in America, who were surveyed by

Pioneer for input for the film.

Narrated by Hugh Downs, the 28-minute film examines the state of grain transportation today and discusses the relationships that exist between modes of transportation and farmers, shippers, carriers and governments.

"Green Light For Grain" is available on free-loan distribution to schools, university audiences and adult groups. Requests for bookings and playdates should be sent to Modern Talking Picture Service, 5000 Park Street North, St. Petersburg, FL 33709, 813/541-7571

UNDERGROUND LIQUID MANURE SYSTEMS

When your new home is five years old, what fuel will be available to heat it?

Conventional heating systems tie you to a single fuel. In these times of uncertain price and supply, that's a risky situation.

The new Type OT boiler for hot-water central heating is different. It burns wood, coal, oil, or gas, and can heat with electricity as well. When you're not burning solid fuel, automatic controls switch to the backup fuel of your choice.

Installing a Type OT boiler in your new home will give you maximum flexibility in choosing your heating fuel, year after year. There's no reason to settle for less.

Farming is third most dangerous occupation

FREDERICK, Md. — With agriculture now the third most hazardous occupation, following mining and construction, farm communities around the nation are rallying around the slogan, "Be Careful, We Love You."

The phrase was coined by a woman whose husband died when his arm became entangled in a grain combine. His wife was attending a safety class, and his children, not

knowing how to help him, watched as he bled to death.

As with most workplaces, farms have occupational health and safety hazards; not just tractors turning over and exposure to toxic chemicals, but a myriad of lesser known accidents and health disorders that are causing rural communities to rally around the cause of agricultural health and safety.

In Frederick County, Maryland, last summer 300 residents joined two local farmers, who had recently had amputations in farm machinery accidents, to stage a week on farm safety demonstrations.

The residents then challenged other counties in the state to hold similar programs, and seven counties did so immediately.

"People are becoming more concerned about their friends and

neighbors being involved in farm accidents," said Gary Smith, an agricultural safety specialist for the Maryland Extension Service.

Farm implement dealers are particularly

active in such programs and have even assumed a regulatory role in some cases. For instance, when a Colorado farmer lost a finger in a corn picker last year, the local John Deere dealership in Fort

Lupton stopped selling the picker.

Other farmers in the community had lost parts of their hands and arms in similar machines, attributable, some said, to the fact that there is no off

switch on the machine itself; the tractor it is attached to must be shut down in order to stop the rotation of moving parts on the picker.

In many states, farmers' wives and children are taking courses in methods of disentangling people from machinery. The first step, of course, is to turn off the machine; then to turn off the diesel fuel.

"Women are the health care workers on the farm," said Margo Rosenkranz, of the Institute of Rural Environmental Health at Colorado State University, "so they are the target for much of the current health care information."

Special training is also being given to emergency medical teams and paramedics in rural areas, where ignorance of farm situations has resulted in the deaths of a number of rescuers in the past few years.

An accident last year in Beaver Creek, Utah, is a prime example.

A farmer went into the manure pit in his barn, where he was overcome with methane gas. His two sons saw him and while one called the sheriff, the other was overcome with the gas as he tried to rescue his father. The sheriff went into the pit also, where he died along with the father and son.

Similar tragedies have recently occurred in Iowa and Pennsylvania when farmers and their rescuers become overcome with silage gas in and around a newly filled silo.

Chemicals have always been a hazard on farms, but since the banning of DDT, health problems related to pesticide exposure have increased.

According to Del Sandfort, also of the Institute of Rural Environmental Health, "the old DDT was an environmental problem but it didn't cause the immediate physical problems to the worker that the new pesticides do." The organo-phosphate pesticides are absorbed easily through the skin and contact can be fatal.

"The main problem," says Sandfort, "is that farmers and workers use these chemicals regularly; they get accustomed to using them and they tend to get careless."

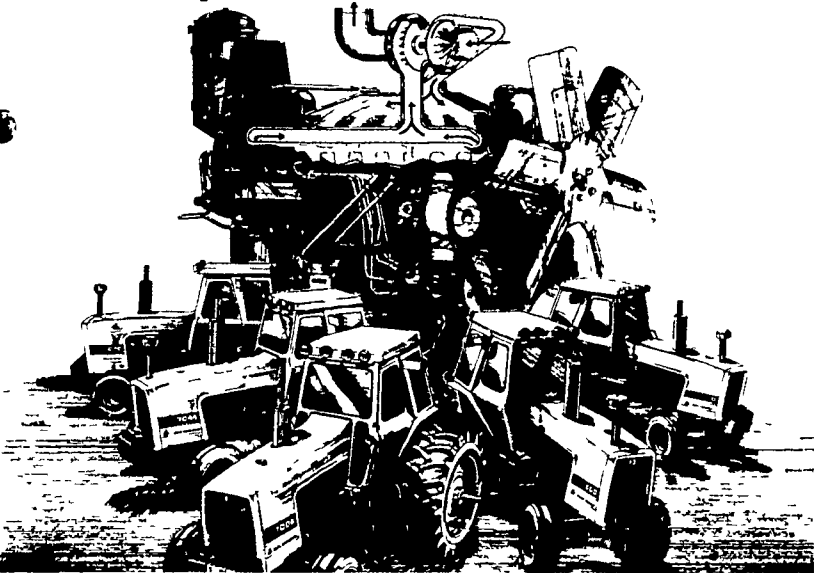

Small-scale ethanol production is a new concern of farm safety experts.

Billy Schroeder, a well-known figure in the American Agriculture Movement which organized farmers to drive their tractors to Washington, was killed last year as his family's new gasohol plant near Springfield, Colorado.

The potential for equipment accidents

CHALLENGE #4

Who leads more hp classes for fuel efficiency in over-100hp 2WD tractors?

✓ Allis-Chalmers turbocharges all its over-100hp tractors.

Turbocharging is just one of the reasons why Allis-Chalmers leads 3 of the 5 over-100 hp 2WD categories in tests for fuel economy. Our diesels are years ahead in productivity, dependability and fuel economy. 3 of our biggest over-100 hp 2WD tractors feature intercoolers for improved performance, economy and long life. A new fuel lift pump assures top performance and easy cold-weather starting. By-pass oil filters mean cleaner oil, fewer changes.

Take the challenge. Compare feature for feature. You'll discover why our line and your Allis-Chalmers dealer are better designed for your operation when it comes to fuel efficiency and top performance.

Better by Design
ALLIS-CHALMERS

TEMIK®

It pays off in better yields. The proof is in the performance.

Potato growers are proving it.

TEMIK provides superior aphid control, preventing the spreading of potato leafroll virus (which can later show up in costly tuber net necrosis), and protects against Colorado potato beetles, leafhoppers and fleabeetles — even organo-phosphate resistant species. TEMIK aldicarb also protects AGAINST NEMATODES AND SUPPRESSES Verticillium wilt.

So, don't take a chance. Get the best pesticide you can buy. Check with your pesticide supplier, or your neighbor. Then try TEMIK in your field. You'll see why the proof is in the performance.

STOP! ALL PESTICIDES CAN BE HARMFUL TO HEALTH AND THE ENVIRONMENT IF MISUSED. READ THE LABEL CAREFULLY AND USE ONLY AS DIRECTED.

TEMIK is the registered trademark of Union Carbide Corporation for aldicarb pesticide.

Farming hazards

(Continued from Page C29) lung Nearly one-third of all agricultural workers suffer from work-related respiratory illnesses, according to Dr. Kelley Donham of the Iowa University Institute of Agricultural Medicine. The maladies range from respiratory allergies to chronic emphysema, and it is not known how many of these problems might be caused by the spores of various molds and other components present in grain dust. While much of the work in farm health and safety has been done in the past by the Extension Service of the U.S. Department of Agriculture, there is a trend toward non-governmental education programs. One reason, says Smith of Maryland, is that "so many regulatory agencies are telling farmers conflicting things."

A controversial medical problem associated with agriculture is farmers' work in farm health and safety has been done in the past by the Extension Service of the U.S. Department of Agriculture, there is a trend toward non-governmental education programs. One reason, says Smith of Maryland, is that "so many regulatory agencies are telling farmers conflicting things."

work in farm health and safety has been done in the past by the Extension Service of the U.S. Department of Agriculture, there is a trend toward non-governmental education programs. One reason, says Smith of Maryland, is that "so many regulatory agencies are telling farmers conflicting things."

work in farm health and safety has been done in the past by the Extension Service of the U.S. Department of Agriculture, there is a trend toward non-governmental education programs. One reason, says Smith of Maryland, is that "so many regulatory agencies are telling farmers conflicting things."

Rural Environmental health also has a non-governmental program which provides consulting services to farmers who want to lessen the occupational hazards on their farms. In addition, it assists in providing training programs for rural health practitioners.

"The next decade will bring an increased understanding among rural health care workers of the unique health problems of people working in agriculture," said Margo Rosenkranz.

At American Pork Congress

Pork delegates approve 10-cent hog checkoff

DES MOINES, IA — Delegates to the NPPC Annual Meeting held during the American Pork Congress in Kansas City, Missouri debated and compromised their differences to chart the future course of the pork industry.

An increase in the feeder pig checkoff rate from five cents per head to ten cents was passed by the delegates of NPPC's 36 member states. The resolution which takes effect July 1, 1982, dictates that six cents of the ten cents will be returned to the state of origin, with the remaining four cents being retained by NPPC.

Standards for ground pork were adopted by the delegates for use by NPPC and all states. This resolution calls for a minimum of at least 70 percent lean product that is preferably processed twice by chopping and grinding, double grinding, or similar procedures.

Delegates defeated a resolution that would have created the Pork Producers Organization for Regulatory Control.

PPORC's function would have been to improve communications with government agencies and Congress through support to individual candidates.

Research shows consumers find this label confusing and derogatory, producers said.

Delegates mandated NPPC's Legislative and Regulatory Committee and staff to make it a priority to seek changes which would allow pork products to be labeled in a consistent manner with those applied to other products.

Pork producers from all parts of the country are expressing concern over marketing problems which have caused financial problems for the entire industry. As a result, the delegates charged the NPPC Marketing Committee with the task of investigating the problem and possible solutions in the marketing area.

1980 NPPC delegates mandated increased funding for the Meat Board's board of directors.

As a result, directors were elected by the delegates during their annual meeting in Kansas City. Those directors newly elected to serve three year terms are: Dale McKee, Illinois; Bill Congleton, Indiana; Fred Lovercamp, Missouri; Marvin Beam, Ohio; Ken Mason, South Dakota; (at large) George Pettit, Kentucky; and (at large) Jerry Jeske, Washington.

Delegates adopted a resolution that calls for NPPC to work with other livestock groups to provide the public with factual information to advance the image of animal agriculture in the public's opinion.

Due to the pork industry losing approximately \$6 million a year because of swine tuberculosis with a minimal salvage value, delegates passed a resolution directing NPPC to work to revise the present condemnation requirements.

To preserve, protect and encourage the development and improvement of agricultural land for the production of food and fiber, delegates directed NPPC to encourage "Right to Farm" legislation.

This legislation would protect agricultural operations from unwarranted encumbrances and nuisance suits.

Pork producers are also directed to have effective input into "Right to Farm" legislation and into the role, zoning, education and research affecting agriculture to prevent conflicts between differing land uses.

Under current regulations, mechanically deboned pork cannot be sold as "pork" but must carry the label "mechanically processed pork with X% ground bone".

Ag Progress Days to run August 25-27

ROCKY SPRINGS — Penn State's 1981 Ag Progress Days — set for August 25, 26 and 27 — will have the theme of "Agriculture — Depend on It!"

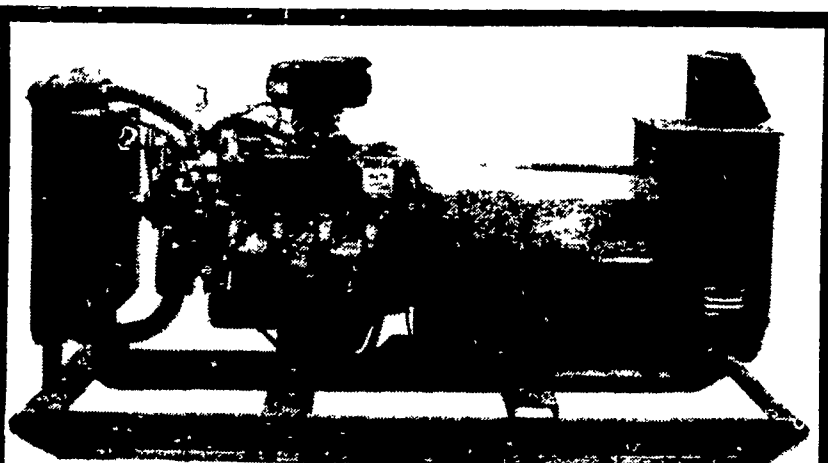

Attracting some 40,000 people each year, the event is held at the Rock Springs Agricultural Research Center, nine miles west of the campus of Route 45.

Features include bus tours to plant science research plots and a

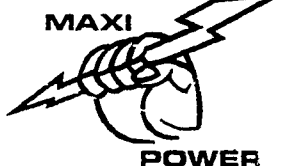

soil and water conservation site. Machinery will demonstrate harvesting of corn and alfalfa.

Highlighted will be family, theatre, and youth activities; dairy and livestock exhibits; and educational and commercial displays.

The contact person for further information is Joe D. Harrington, 232 Agricultural Administration Building, University Park, Pa. 16802, telephone 814/863-2081.

American Dairy Assn. holds 21st annual meeting

SYRACUSE, N.Y. — Approximately 200 dairy farmers, representing about 21,000 Order 4 producers, attended the 21st Annual meeting of the American Dairy Association and Dairy Council Inc. held in Syracuse, N.Y.

Theme for the day long meeting was "Building markets for a real dairy future."

Robert Katz, of the National Dairy Council, was the keynote luncheon speaker who analyzed the scientific, political and consumer pressures that generate controversy about milk and dairy foods. He also responded to some of the recent attacks on dairy foods as contributing to certain diseases which, when actual facts were presented, was proven false.

In fact, the absence of dairy products in the diet could cause much more serious problems, he

said

The dairy industry must realize that dairy foods are no longer taken for granted by the public as being essential to the diet. Research must continue, so scientists can evaluate the risks and benefits of using diet to control disease, he said.

Following the morning business meeting farmers and other guests attended seminars on "Advertising Strategy and Implementation" where farmers learned that children under 12 drink one-half of all milk consumed and this figure is declining.

Farmers were also given some disturbing facts on other age groups use of dairy products and some ways they could and should use to turn these statistics around.

In "Imitations — the best defense is a strong offense," which

was presented by United Dairy Industry Association and Research" there was much emphasis placed on imitation foods and whether they are really nutritionally adequate for a person's diet.

In fact, we now have an "imitation" "imitation" (a margarine substitute). Some of the research projects done in conjunction with United Dairy Industry Association have proven helpful to others besides the dairy farmer.

Some are.

(1) A beverage beer made from whey, by product of the cheese industry which was in oversupply and costly to get rid of;

(2) Making an alcohol for use as fuel out of whey, this project was termed as not feasible costwise in 1979 when gasoline was 80 cents, but now probably would be worth

the effort;

"Meanwhile Back at the Ranch" was presented by the A.D.A. and D.C. staff to cover special promotions and events organized and executed by the Syracuse based organization, dairy princess activities, mall displays, and other events such as the "Milk Run Marathon", which was very successful.

The evening banquet speaker was Jack Dennison, a New England humorist who shared "Rural Reflections from Maine."

Dennison, who is assistant dean of Food and Natural Resources, University of Massachusetts, is well known in agricultural circles for his amusing stories of growing up on a Maine chicken farm.

Robert Turner, General

Manager of ADA & D.C., presented five "Service to Dairying" Awards.

The first went to Tom Jurchak, Lackawanna County extension agent, for outstanding service to the dairy industry as editor of Milk Market News distributed to 28,000 dairymen.

Also receiving awards were four television talk show personalities who regularly feature ADA & DC dairy food specialist Donna Yousey.

On Friday, March 13 the Board of Directors met to elect officers for the next year.

Officers elected were President, Ronald Harris; Vice President, Allen Ostrander; Secretary, Eugene Brace; and Treasurer, Raymond Johnson.

Fertilizer dealers see record sales year

CHICAGO, Ill. — The fertilizer industry should sell record tonnages in 1981, unless poor weather conditions and low dealer inventories lead to "chaos" in delivering the material to the farmer, an industry spokesman said here Wednesday.

Edwin M. Wheeler, president of The Fertilizer Institute, predicted fertilizer consumption to exceed 55 million tons in the current 1981 fertilizer year, but cautioned that low water levels in the nation's major river systems signal the "greatest single concern we all ought to have" in 1981.

"The balance of our retailers generally are not stocked with adequate inventory," he said. "Placing a booming load of orders on the railroads, due to diverted barge shipments, could well lead to chaos."

"We can't do anything about the weather, but we can do a great deal about transport — if we act now," he said.

High interest rates have deterred dealers from carrying proper inventories, Wheeler ex-

plained, but said a late surge of orders could cause "serious trouble" in meeting delivery expectations.

Expressing confidence that the problems can be overcome, Wheeler told the more than 1000 industry representatives on hand for the Institute's annual meeting that U.S. farmers will buy the largest fertilizer tonnage ever — topping 1980's record 52.6 million tons.

The reason, he said, is that world demand for U.S. farm products continues to rise — and farmers

are responding by producing greater quantities of food.

"The world has not just beaten a path to our farmers' doorstep, rather it has literally created a super-highway to our markets," he said, citing a six-fold increase in farm export value in little more than 10 years.

"With one acre in three now producing for non-U.S. consumers," Wheeler concluded, "it's easy to see why domestic demand for fertilizer has continued its relentless upward pace."

Does the U.S. need a better nutrition policy?

NEWARK, Del. — Since nutrition concerns everyone, food policy will become an increasingly important part of national food and agriculture policy in 1981.

While the United States has never had a formal food policy, we have long had a patchwork of policies designed to assure the availability of an adequate, safe, palatable, nutritionally balanced, and reasonably priced food supply for all Americans, while providing a fair return and equitable wages to the food industry.

If Congress were to enact a formal food policy this year, it would likely include essential elements of the existing composite set of policies, according to Delaware extension community and resource economics specialist Gerald F. Vaughn. Areas of concern would be: determination of nutritional needs; food assistance; food safety and quality; and food production and costs.

An increasing awareness of the nutritional problems of American citizens has moved policymakers to respond in several areas. Over a decade ago, a report entitled *Hunger U.S.A.*, several television documentaries and a White House Conference on Food focused the nation's attention on food problems of the poor. Policymakers responded by increasing the amount of money available for assistance for food purchases.

For example, the Food Stamp Program grew from a \$288 million program serving 2.8 million people in 1968 to a \$7 billion program serving over 19 million in 1979. Adjusting for inflation, this was a twelve-fold increase in food distribution. One reason for this growth was the shift from com-

modity distribution to the Food Stamp Program.

Reduced-price school lunches were served to three million children from low-income families in 1968. In 1978, 12 million poor children received \$1.2 billion in lunches.

The School Breakfast Program, offering free breakfasts to needy children, has expanded from a budgeted \$5.5 million program serving 300,000 children in 1968 to a \$200 million program serving over 3 million children in 1979.

There are also special food programs for other groups such as the low-income elderly. The campaign to enlarge the federal food programs has resulted in over 60 million people now receiving some benefit from one or more of these programs.

Federal food programs have received much attention from policymakers and much criticism from certain sectors of society. However, research has indicated that many people benefit from the federal food programs.

Authors of the *Hunger U.S.A.* report recently told the Senate Subcommittee on Nutrition about their experiences in visiting U.S. poverty areas in 1977. According to their report: "Our first and overwhelming impression is that there are fewer grossly malnourished people in this country today than there were ten years ago. Malnutrition has become a subtler problem."

Other federal government activities affecting human nutrition include grading and inspecting foods, ingredient and nutrient labeling, and protecting consumers from carcinogens and other harmful substances. Public

research and Extension programs are designed to improve nutrition through improved food quality, increased food industry productivity, and nutrition education.

In any new policy formulation, present programs would continue, although they might be altered in form. The general farm programs would also continue, although they also may be altered somewhat.

What would be new is a shifting of the emphasis to nutrition and food safety. Throughout most of history the primary policy focus has been directed toward adequate supplies. This focus led to government policies directed toward increased food production, better food preservation and improved systems for the transportation and distribution of food.

But the very success of those

programs led to new problems of excess food production and depressed farm commodity prices. To help maintain a viable farm sector, farm price and income support programs have been a major part of public food and agriculture policies since the 1930's.

The question today is whether we will move deliberately toward an explicit, formal, structured nutrition policy which will then serve as the basis for our food and farm policies, or whether we will continue by gradual shifts in emphasis to evolve a comprehensive food policy.

Among the key issues of debate this year may be the form of food assistance. The funding authorization for the Food Stamp

Program, now providing assistance to nearly 22 million people as the largest federal public assistance program, expires September 30.

The Carter administration was expected to propose only minor changes, but the Reagan administration's proposals for major changes now may receive greater acceptance.

For a more complete discussion of nutrition policy, food quality, and food assistance, contact Gerald F. Vaughn for Factsheet #7 of the series devoted to food and agricultural policy issues for the 1980's.

A free copy may be obtained by writing to Vaughn at Agricultural Hall, University of Delaware, Newark, DE 19711.

Argentina reports exports

BUENOS AIRES — Argentina exported 12.6 millions ton of grains and oilseeds in 1980, 28 percent less than 17 million tons shipped in 1979, the National Grain Board reports.

Durum wheat, corn, soybeans and sorghum accounted for 94 percent of the 1980 volume; in all, 14 types of grains were shipped. Durum wheat shipments totaled 4.37 million tons, a 5.3 percent increase; corn, at 3.52 million tons, was off 37.1 percent; soybeans, 2.71 million tons, down 3.2 percent, and sorghum, 1.51 million tons, down 61.3 percent.

The Soviet Union took 60.1 percent of total grain shipments last year, or 7.58 million tons; followed by Brazil, with 1.16

million tons; the Netherlands, 765,000 tons; Italy, 740,000 tons, and China, 665,000 tons.

In 1979 the Netherlands, Italy and China were among the seven markets importing at least one million tons of Argentine grains each, with 1.6 million, 2.2 million and one million tons, respectively.

Japan brought 2.4 million tons in 1979 and 382,000 tons in 1980, while

Spain imported 2.2 million tons in 1979 and 364,100 last year, reductions of 98.4 percent and 84 percent.

In 1980, the Soviets bought 52 percent of Argentina's durum wheat consignments, 38 percent of its semolina wheat, 84 percent of corn, 59 percent of barley, all rye, 97 percent of sorghum and 27 percent of soybeans.

Sheep Council expands marketing efforts

LANCASTER — Taking an aggressive new approach to lamb marketing, the American Sheep Producers Council announced a new effort to expand the availability of fresh American lamb throughout the southwestern United States.

As a result of the organization's semi-annual directors' meeting in Denver last week, additional financial and personnel resources will be allocated to expanding the markets for lamb and wool, according to Richard D. Biglin, Executive Director of the ASPC.

"The Lamb Advisory Committee approved additional funds and manpower to lead the effort to increase consumption of lamb in the growing population areas of the Sunbelt," Biglin said. "The effort will begin immediately."

Chris P. Joufflas, the Grand Junction, Colorado sheep producer who is president of the Council, told the assembled directors that the Special Lamb Marketing Task Force has taken a strong forward step, combining with all segments of the industry and the meat trade to develop positive action to relieve the violent price ups and downs in the lamb marketplace.

"The sheep industry is taking

four steps to insure our viability: We're improving product to obtain consistently meatier cuts of quality lambs; we're pricing lamb competitively, and we're producing lamb of uniform quality and making it more generally available to retail outlets throughout the country," Joufflas said.

Producers must act wisely to avoid price wrecks like the 39 percent decline in live lamb prices which impacted the industry early this year, Joufflas said, because agriculture cannot continue to operate at a loss.

"We will be geared to using the best technical and scientific husbandry information, becoming more skilled in our marketing approaches and more successful in rebuilding and strengthening the sheep industry in America," Joufflas said.

In a morning keynote address, Sam Washburn, president-elect of the National Cattlemen's Association, pointed to the great commonality of interest for all American livestock groups, and outlined the need for orderly marketing and profitable livestock operations. Washburn predicted the sheep industry will see in-

creased demand for their products, and noted that the climate for government deregulation will improve the outlook.

Washburn also told the sheep producers not to expect preferential legislation this year because the mood of the nation is toward greater fiscal responsibility. But, he added, future agricultural profits will be greater if the rate of inflation is slowed.

Gerald Tipper, president of Cascade Woolen Mills in Oakland, Maine, addressed an afternoon session, pointing out that the demand for wool is very strong this year and will continue to show gains.

"More and more designers are calling for 100 percent wool in coats for both men and women. I'm more optimistic about the outlook for wool now at anytime in the past 10 years. New England mills are operating at full capacity, because consumers realize that wool has

value - it lasts longer, and presents a classic design," Tipper said.

Tipper outlined four major markets for wool fabric which show signs of expansion: Better men's and women's sportswear, for which there is great demand for Shetland and flannel fabrics; outerwear, which presents a bright outlook for 1981 and beyond; woolen upholstery fabrics for commercial furniture, and industrial markets, including woven woolfelts.

In other action, the ASPC assembly announced an in-depth study and subsequent independent

evaluation of their jointly-sponsored Make It Yourself With Wool contest, which encourages young adults to sew, knit and crochet with wool by providing a national competition and valuable prizes.

Additionally, it was announced that the National Lamb Marketing Symposium underway March 23-25 in Wichita, Kansas, would further address the orderly lamb marketing techniques which would avoid crowding markets during seasonal highs, and which will offer valuable information to the nation's sheep producers.

Waives milk assessment

ALEXANDRIA, Va. — The 2.5 cent per hundredweight administrative assessment for Order 5 will be waived on milk handled during the months of April and

May 1981.

The assessment will be reinstated effective with June 1981 milk deliveries, according to Market Administrator Joseph D. Shire.

Pa. Charolais breeder receives AICA awards

HOUSTON, Tex. — J.C. Enterprises, a Charolais breeding operation located in Ringgold, Jefferson County, recently learned two of their purebred cows have been awarded the American-International Charolais Association's Sterling Dam of Distinction Award. This is the first time the Pennsylvania farm has achieved this distinction for their dams, which are the 63rd and 64th Charolais dams to receive this award.

The 63rd recipient, JC Princess 410, F 245812, is sired by RCC Royal Prince 20th 514 and out of the dam HF012 Bo Peep Aiglon 012. JC Princess 410 was calves on April 17, 1974, had her first calf on May 3, 1976 and her fifth qualifying calf on April 1, 1980, for a calving interval of 359 days. Her five calves weighed an average of 663 pounds at weaning and averaged 22 percent better than their 158 contemporaries.

JC Princess 407, F 245807, the 64th Sterling Dam of Distinction, was also sired by RCC Royal Prince 20th 514 and out of the dam Miss Gwynnfield No. 1268. She was born on April 2, 1974 and had her first calf on July 2, 1976. Her fifth and qualifying calf came on April 12, 1980 which gave her a calving interval of 337 days or a live calf every 11 months. JC Princess 407's calves average weaning weight was 686 pounds which was 31 percent above the average of their 156 contemporaries.

The Dam of Distinction Program was established in 1976 by the American-International Charolais Association to recognize those Charolais seedstock producers who, through the use of accurate performance records and careful selection, breed registered Charolais cattle of superior reproductive and maternal abilities.

To qualify for the American-International Charolais Association's Sterling Dam of Distinction Award, a dam must have at least 15/16 Charolais breeding and be Recorded or Registered in the Charolais herd-book. Additionally, the cow must

have calved 5 calves by seven years of age with a regular calving interval of 365 days and each calf must have an adjusted weaning weight ratio of 101 or greater.

Twin calves are recorded as one calving and calves resulting from ovum transplants are not eligible. Owners of qualifying Recorded and Registered Charolais dams are sent an official certificate, suitable for framing.

Cover yourself with Pro-Panel II.

Here are six good reasons why you should side with Pro-Panel® II.

- 1 It's made of 90,000 psi high tensile strength 29 gauge steel

2 It gives you full 36" coverage.

3 No creeping or gapping problems.
- 4 It's fully compatible with all standard hardware

5 Features a unique weather-tight lap design that eliminates leaks
6. Available in six beautiful colors

Build it better with Pro-Panel II. The great cover-up.

Hog magazine available

SHAWNEE MISSION, Ks. — Hog producers of Eastern Pennsylvania may be eligible to receive Pork Producers Reference, a totally new magazine. The first of six issues for 1981 carries a March cover date, and is now available free to qualified hog farmers who complete a subscription qualification form.

Bill Newham, the former Executive Secretary of the National Spotted Swine Record, is the new editor. He says Pork Producers Reference provides practical editorial information addressing volume hog producers' three basic business needs - production, marketing, and people.

"Our goal is to deliver innovative information on management practices and methods, with special emphasis on confinement," Newham explains. "Our marketing section deals primarily with planning and strategies to help our readers buy and sell hogs to their best advantage."

Newham adds, "The people section is what really makes our publication unique and entertaining. We focus on the faces and personalities of the people who shape the pork industry."

Area hog farmers can request a free subscription qualification form by writing to Pork Producers Reference, Box 2939, Shawnee Mission, KS 66201.

The New Surge TRU.

**Modern
manure handling
with a big
difference.**

Separation is the key to the TRU difference.

The new compact TRU uses a series of rubber rollers and perforated steel drums to separate hard-to-handle manure into two easy-to-handle by-products. One solid and one liquid.

The solid by-product is made up of undigested feed particles like straw, haystems and silage. The spongy solids resemble commercial peat moss.

A dairyman with a 100 cow herd can save \$2,400 a year when he uses the TRU solids for bedding. (Based on an estimated value of bedding at \$2.00 per cow per month.)

The liquid contains up to 85% of the valuable fertilizer nutrients of raw manure.

Because the liquid is of water consistency, it's easier to handle than unprocessed slurry. Easier to get into storage and easier to apply in the field. There is no need to use expensive equipment and tractors because the surface won't form a heavy crust in pit or lagoon storage.

Let us show you what the TRU difference can do for you.

Solanco FFA holds annual awards banquet

BY SUSAN KAUFFMAN
Staff Correspondent

QUARRYVILLE — The Solanco FFA held its annual awards banquet March 19 at the high school to honor members and community supporters as well. After enjoying a meal in the cafeteria, the group moved to the auditorium where the numerous awards were announced. Following the presentations, Deb Harnish entertained with her ventriloquist act.

Robert C. Burkins and Ernest Frey were recognized for their encouragement to the chapter by being named honorary members. Burkins is a Holtwood beef farmer who has helped members in the selection of baby beef for the Solanco Fair competition. Frey, agri-businessman from R2 Quarryville, was cited for his cooperation with the local chapter in selection and maintenance of the equipment used for beef projects.

Star Greenhand was Jamie Frey, 14, daughter of Mr. and Mrs. Ernest Frey, Quarryville, R2. Her projects include beef finishing and greenhouse operation.

Star Chapter Farmer, the outstanding second-year FFA member, was Kenneth G. Miller, 16, son of Mr. and Mrs. Kenneth G. Miller, R1 Christiana. His projects include dairy, small grains, corn, hay, swine breeding and rabbits.

Star Red Rose Farmer, outstanding student in agriculture production who holds the Red Rose degree is Robert Kirk. He is the 18 year old son of Mr. and Mrs. Francis Kirk, R1 Peach Bottom. Kirk's projects include 10 registered Guernsey animals and corn.

Star Red Rose Agri-businessman is Ernest Frey, Jr. He is the son of Mr. and Mrs. Ernest Frey, R2 Quarryville. His project involved on-farm work experience.

Star Keystone farmer, Douglas T. Hershberger, 18, is the son of Mr. and Mrs. Robert Hershberger, R4 Quarryville. Projects he has elected are a registered Holstein dairy herd of 17 animals and corn. John Dantine presented to Hershberger the award sponsored by Lancaster Bone Fertilizer.

Hershberger, chapter president, also received several additional awards. Among them were first place in the highest yield per acre of corn in the chapter, the Ross H. Rohrer and Son dairy award presented to the senior FFA member who has an outstanding dairy herd and the Production Credit record book award.

The highest degree awarded by the National FFA, the American Farmer Degree, had been presented to Vickie Warfel last November. The chapter announced that she is the first girl from the state of Pennsylvania to receive that honor. Vickie is the daughter of Mr. and Mrs. George Warfel, R1 Quarryville. Randall Ranck, past State FFA President, also a Solanco graduate presented the award to Miss Warfel. She is working with crops and a dairy on the family farm West of Quarryville. She is also in partnership with her father in a hog finishing enterprise.

Steve Herr, on behalf of A.L. Herr and Bros., Quarryville presented the three top placing ear corn winners with trophies. Hershberger placed first with 168 bushels per acre. Second was Scott Brinton, son of Mr. and Mrs. Victor Brinton, R1 Peach Bottom. Scott tallied 157 bushels per acre. Third place was Jeffrey Wood, son of Mr. and Mrs. Jesse Wood, R2, Nottingham. His crop yielded 155 bushels per acre.

The corn silage award went to Robert Work, R2 Peach Bottom. Scott Osborne from Powl's Feed Service, presented the award to work. Work's yield was 26 tons per acre.

Farm Women No. 20 presented an award to Bryan Herr as an outstanding senior in agriculture. Herr is the son of Mr. and Mrs. Allen Herr, R1 Christiana. His projects include agriculture production and on-farm work.

The Lancaster County Bankers' award went to Dwight Herr, son of Mr. and Mrs. Donald Herr, R2 Quarryville.

Henry Wenger presented Jeffrey Keller with the Henry N. Wenger Life Insurance Agency Award given to the senior agriculture student who has made the best use

Among the top award winners at the Solanco FFA annual banquet are, from the left, Jamie Frey, Star Greenhand; Kenneth Miller, Star Chapter Farmer; Robert Kirk, Star Red Rose

Farmer; Ernie Frey Jr., Star Red Rose Agri-businessman; and Vickie Warfel, American Farmer.

of the resources available to him. Keller is the son of Mr. and Mrs. Harold Keller, R1 New Providence. Keller is presently working full time on a dairy.

Those members who have received the Keystone Farmer Degree this past January are Bryan Dickson, Dwight Herr, Jeffrey Keller, Jeffrey Wood, Douglas Hershberger and R. Mark Eager.

Red Rose Degree Students are Allen Anderson, Philip Aument, Scott Brinton, Jake Frank, Ernie Frey, Jack Heidelbaugh, Tom Herr, Brett Holzhauser, Robert Kirk, Dave Myers, Leon Tadych and Mark Trimble.

Chapter Farmer members are Steve Aument, Dave Church, Terry Groff, Fred Hanley, Rick Keefer, Dale Milburn, Ken Miller, William Morris, Andy Nelson, Randy Richardson, Ken Scott, Doug Sheets, Doris Smith, Ray Steen, Jim Strawser, Tina Tadych, Brian Trimble, Richard Warner, Shari Weidman, Jeff Diem and Ted Shaffer.

Honorary Chapter Farmer Degree recipients receiving congratulations of Solanco FFA president Doug Hershberger include Robert Burkins and Ernest Frey.

Greenhand degree recipients include Shawn Caldwell, Bruce Cantey, Bill Coyne, Craig Ewaka, Tom Erb, Jamie Frey, Todd Groff, Tom Guhl, Frank Hall, Wes Hanley, Robert Morrison, Ron

Keys, Mike Miller, Steve Phipps, Bill Rhine, Tony Todd, Frank Towner, Brian Walker, Andy Weaver, Randy Weaver, Mark Welk, John Wiles, and John Young.

Cattlemen work to improve demand for beef

DENVER, Colo. — The National Cattlemen's Assn. Tuesday urged the U.S. Department of Agriculture and food retailers to call more public attention to the nation's ample and favorably priced supply of beef.

In a letter to Agriculture Secretary John R. Block, NCA urged that USDA "publicize information showing that meat supplies in general and beef supplies in particular are larger than previously expected, and that beef is now a better buy for consumers than had been anticipated."

A copy of the letter to USDA was sent to leading food chains, and they were asked to increase their beef advertising and merchandising programs in order to help move the burdensome supply.

NCA President J.W. Swan told Block of the devastating cost-price squeeze in which cattlemen have found themselves for the past year and a half or more. He cited data showing record large supplies of meat.

He noted retail beef prices are no higher than a year ago, and that cattle and wholesale beef prices are down from 1980 levels.

"Clearly", Swan said in his letter to Block, "beef prices have not been rising so rapidly as the prices of most things we buy. We think that consumers, food retailers and restaurant operators would be well served if more attention were called to the ample supplies and (from a consumer

standpoint) the favorable prices of beef."

He told retailers that "there are and will be some very good opportunities to promote and merchandise beef aggressively."

Swan's letters were written because of the urgent industry need to step up demand for beef. Using USDA data on cattle feeding returns, he noted that feeders have sustained very large losses most of the time since mid-1979. Similar data from cow-calf operators are not available, but, for more than a year, producers have been in a loss or no better than break-even position.

The NCA president also asked USDA to: (1) Encourage retailers to do more featuring; (2) call particular attention to the low-per-serving costs of ground beef and certain other cuts; (3) use the extension service, food programs and other USDA resources to emphasize beef's availability and relatively low prices; (4) disseminate more positive information about beef's nutritional values, thereby countering the anti-meat bias which has been apparent in government programs in recent years.

NCA said that, based on its continuing beef price survey, it appears that retail beef featuring has been limited in some cities. It is hoped that more aggressive beef merchandising soon will be seen.

Such efforts would be in addition to stepped up advertising programs being carried out in

several major markets by the National Live Stock & Meat Board, in cooperation with state beef councils.

Among other NCA efforts to help on the demand side are: (1) Dissemination of background

information on the cattle and beef situation to major news media, consumer groups and others; (2) the continuing NCA beef price survey, showing that beef is one item whose prices have not been rising; (3) co-sponsorship of the

March 28 National Beef Forum, with its goal of increasing beef promotion; (4) efforts to modernize the beef grading standards in order to stimulate production of leaner beef, in response to consumer demands.

Delaware irrigation program to continue this year

MIDDLETOWN, Del. — The University of Delaware's First State Irrigation Program, which has been under way for the past four years, will be continued in 1981. It is expected to involve nearly 10,000 acres of irrigated corn.

Growth in the state's irrigation acreage stems in part from last year's drought.

The 1980 drought cut yields badly in Delaware. The average yield on non-irrigated land was 75 bushels per acre in the Middletown area. But yields dropped as low as five bushels per acre in other parts of the state.

Compare this to yields on irrigated land ranging from 160 to over 200 bushels, with a record high of 291 bushels on limited acreage in the Odessa area, and you can see why irrigation is catching on.

William H. Mitchell, extension agronomist at the University, says there has been a sharp increase in

the use of irrigation since their First State Irrigation Program began in 1976. The program is an intensive research and demonstration project involving scientists at the Delaware Agricultural Experiment Station and specialists with the Delaware Extension Service.

It is designed to survey irrigation techniques used by growers, and to combine this information with research at the university. The goal is to develop a better irrigation system for corn and soybeans.

Mitchell says farmers are using irrigation to increase the profitability of corn by stabilizing production. During drought years, irrigation can help stem losses caused by lack of rain.

Many growers are also using no-tillage, a cultural practice which fits nicely with new energy-saving irrigation systems.

The program will be in its fifth year in 1981. This year, the em-

phasis will be on soil and plant diagnostic testing, techniques for irrigation scheduling, improved fertilization system.

Mitchell says the idea is to help farmers already using irrigation maximize their profits, and to assist owners of new systems in adopting the best management practices based on several years of research and testing.

For further information or if you are interested in participating in the program, contact the county extension agent in Newark, Dover, or Georgetown, Del.

Root shoot propagation could explode peach output

KEARNEYSVILLE, W.Va. - New plant propagation techniques being studied at USDA's Beltsville Agricultural Research Center may revolutionize the peach-growing industry.

At a recent meeting of the American Peach Council, USDA scientist Freddi Hammerschlag predicted that micropropagation techniques could result in the production of fruit-bearing peach trees many times faster than currently possible.

Micropropagation techniques for peaches will facilitate high-density orchard management in which 500 to 700 small trees are planted on each acre instead of the usual low-density of 150 to 180 trees, said Hammerschlag of USDA's Science & Education Administration.

Although this high-density management has been shown to be more productive per acre, until now peach trees have been too expensive and too large to be used in this new system. Rooted shoots produced by micropropagation

will be small and inexpensive enough for high-density orchard management, she said.

Traditionally, peaches have been propagated by grafting, since peach seeds do not reproduce all the characteristics of parent trees and peach cuttings from most varieties are very difficult to root.

In grafting buds from last year's growth (budwood) are grafted onto the stem of one of a few types of peaches produced from seed (rootstocks). This procedure is costly and time-consuming.

By using micropropagation techniques a tiny shoot from budwood can produce five to ten shoots every six weeks. Then each new shoot can be used to produce many more shoots. The shoots are then encouraged to root and, after an adjustment period, are put into soil for shipment to growers.

In this way, many plants can be grown very quickly. And if virus-free budwood is used, disease-free plants can be distributed.

Hammerschlag, a plant

physiologist working in the Cell Culture and Nitrogen Fixation Laboratory, is now successfully growing peach shoots in sterile media.

The peaches she grows in this way include the popular varieties Dixired, Jerseyqueen, Redskin, and Sunhigh.

Her next step will be to encourage root formation so these trees can be studied in the field.

These new techniques have been used successfully for propagating many non-woody plants on a commercial scale, like strawberries, orchids and ferns. However, material from trees is more difficult to grow. Also, the testing program for fruit trees is a lengthy one.

Hammerschlag, in cooperation with Ralph Sconza of SEA's Appalachian Fruit Research Station in Kearneysville, W. Va., is studying yield, vigor, tree size, and genetic stability of micropropagated fruit trees compared with trees propagated

by grafting.

The main application for micropropagation, Hammerschlag said, is obtaining low-cost disease-free trees from shoots of virus-free budwood for high-density or-

chards. Also, she expects that micropropagation will dramatically speed up the testing and release of new varieties of peaches.

Md. Polled Herefords to hold annual sale

FREDERICK, Md. - The Maryland Polled Hereford Association's Black Eyed Susan Sale will be held 7 p.m. April 4 at Frederick Fair Grounds.

Grading of the 51 females and four bulls will take place at 3 p.m.

There will be a three-judging grading team which will include three outstanding cattlemen from two states: Jim Strawn from Falkland Farm, Schellburg, Pa.; Conrad Grove Manager of Deverdux-Soleil Farms in Pennsylvania; and Ed Brown from Berryville, Va.

Each of these men are experts in the beef cattle field and can be counted on to assess the cattle to help with purchasers selections.

Everyone is invited to the grading of the cattle which will take place at 3 p.m. in the show area of the beef barn.

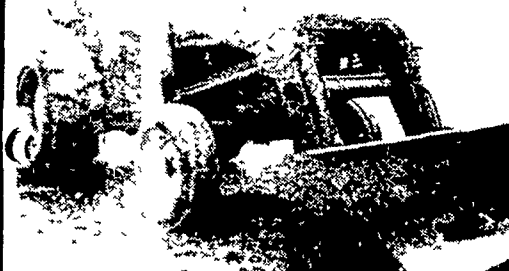

A dinner will be served by the Maryland Polled Herefords at 5 p.m. in the 4-H barn.

Ronald E. Mills, chairman of the sale, can be reached at 301/253-2992 between 5 p.m. and 9:30 p.m. for information or catalogs.

Grassland FFA presents awards at banquet

BLUE BALL — More than 200 members, parents, friends and supporters of Future Farmers of America activities in Eastern Lancaster County attended the annual banquet of the Grassland Chapter on Friday, March 20, in the Blue Ball Fire Hall.

Greetings from the State FFA Association were brought to the group by Judy Zimmerman, state secretary from Ephrata.

She called on the FFA members to take advantage of the many advantages, including more than 100 contests, offered in their program of activities.

"Don't look back on your FFA career one day and have to say that it's too late," she said.

Among the top award winners were:

Barbara Herr, Grassland Star Farmer; Dennis Weaver, Star Red Rose Farmer; and Mervin Zimmerman, Star Red Rose Agribusinessman.

Carolyn Witmer and Mark Weber, Star Chapter Farmers.

Scott Bailey and Randy Musselman, Star Greenhands.

Scott Bailey won both the Creed Contest and was high seed salesman in the ninth grade. High salesman in the senior group was Lance Horst.

Barb Herr also won the Lancaster County Bankers Association Award and a special award for showing the 1981 Farm Show reserve champion market lamb.

Trophies were presented to members of the Parliamentary Procedure Team, which won the state title.

Foundation awards presented to tenth through twelfth graders:

Glenn Yoder, beef production; Dennis Weaver, dairy production; Clifford Horning, poultry production; Carolyn Witmer, sheep production; Dean Nolt, swine production; Glenn Hartz, diversified livestock; Linford Martin, vegetable production; Roger Weaver, agricultural mechanics.

Star Greenhand recipients at the annual banquet of Grassland FFA Chapter include Scott Bailey, left, and Randy Musselman.

Also, Lance Horst, agricultural electrification; Jay Zimmerman, ornamental horticulture; Lee Zimmerman, nursery operations; Doug Dosch, agricultural processing; Ron Martin, agricultural sales and service; William Hursh, placement in agricultural production; Gerald Baker, home improvement; Mark Weber, crop production; Barb Herr, extemporaneous speaking; Lisa Russel, public speaking; Kevin Devine, outdoor recreation; and Lori Fox, soil and water management.

Ninth grade award winners

Michael Eberly, public speaking; Randy Musselman, poultry production; Barry Horst, dairy production; Carl Horning, vegetable production; Barry Martin, diversified livestock; Chad Lebo, placement in ag processing; John Sweigart, placement in ag production; Scott

Espenshade, placement in ag sales and service.

Also, Randy Weaver, home and farm improvement; Jeff Weber, ag electrification; Michael Shriver, forestry; John Tregó, fish and wildlife management; Rodney Kring, soil and water management; Scott Bailey, public speaking; Leroy Wanner, farm mechanics; Steve Levin, outdoor recreation.

Honorary Chapter Farmer Degrees were presented to Donald Reed, Charles Rice, Mr. and Mrs. Larry Devine, James Stauffer, Robert Woods, Paul Martin and Mrs. Barbara Givler.

Certificates of appreciation went to Donna Weaver, Donna Stoltzfus, Jacob Musser, Jane Best, Dick Anglesstein, Eugene Eberly, James Kruis, Greg Hackenburg, Larry Burkhardt, Ronald Yerger, Susan Teats and Leo Ward.

Entertainment was provided by Deb Harnush, ventriloquist —DA

Among the top award winners at Grassland FFA Chapter's annual banquet are Barbara Herr, Grassland Star Farmer, and Dennis Weaver, Star Red Rose Farmer.

Sharing the Star Chapter Farmer honors of the Grassland FFA Chapter are Carolyn Witmer and Mark Weber.

Farm experts discuss 1980's outlook

MAUI, HAWAII — Five experts presented outlook information about varying phases of American agriculture at an agribusiness seminar concluding here this week.

Attending were approximately 60 seed corn dealers and farmers from throughout the Midwest. The seminar was sponsored by Pfizer Genetics.

Individuals addressing this seminar included Earl L. Butz, Dean Emeritus of Agriculture at Purdue University and former U.S. Secretary of Agriculture; A. Forrest Troyer, Director of Research and Development of Pfizer Genetics; R.M. Hendrickson, President of Pfizer's Agricultural Division; Margaret Maxey, Assistant Director of the South Carolina Energy Research Institute; and Tom M. Reese, Director of Marketing for Pfizer Genetics.

Butz spoke to this group about the increasing impact of food production on world diplomacy. "Historically, there have been two poles of power in the world...in Washington and Moscow," Butz said. "But there recently has been a dichotomy of power — in petroleum and food power. And food power is a coming thing. During the next decade, it may overtake petro power in world diplomacy."

A. Forrest Troyer discussed new methodology used in plant breeding. And he explained how this methodology has been shaped to produce seed corn varieties with broad-based adaptability.

"For a seed corn variety to succeed," he explained, "it must

produce well in a very wide range of growing conditions...because conditions in a given locale can sharply vary from year to year.

"It's therefore up to the plant breeder to isolate crosses that have consistency," Troyer continued. "To efficiently isolate the 'right' crosses from the thousands available, systematic research must be conducted. Some good corn varieties may have been discovered by chance during the past. But in the future, we cannot rely on chance to produce superior varieties year after year."

In a speech entitled "The American Farmer And World Trade," R.M. Hendrickson predicted American agriculture is

on the brink of the largest growth surge in this country's history.

He reviewed agricultural exports of the past decade, and projected growth patterns versus population increases throughout the remainder of the 20th century.

Hendrickson warned, however, that the American farmer alone cannot alleviate food production problems for the developing countries of the world, even with dramatic increases in food exports. He cited a need for freedom of enterprise and freedom of spirit in the world's farm populations.

Margaret Maxey spoke about the energy needs of American agriculture during the remainder

of this century.

"The importance of adequate energy supplies for sustaining the modern miracle of American agriculture" cannot be exaggerated," Maxey claimed.

"We must define our energy needs from the global perspective of meeting world needs for food and basic material well-being, instead of retreating into our local bastions of privilege."

Concluding the seminar, Tom M. Reese presented an analysis of how the American farmer and seed breeder have worked together to sharply increase yields during the past fifty years. And he predicted a much greater need for intensive

research by private seed companies during the Eighties.

"Research in plant genetics once was supported, in large part, by land grant colleges," Reese said. "Farmers depended on the colleges to produce for them new varieties, and new ways to combat production problems through seed selection."

"But the price tag for this type of research work is steadily increasing at a time when many land grant colleges are being forced to cut back on expenditures," Reese added. "This places the major burden of seed development squarely on the shoulders of several large, private companies."

National Pork Producers elect new officers

DES MOINES, IA — John Saunders of Osborn, Missouri, was elected president of the National Pork Producers Council, the nation's largest commodity organization. He was selected by the NPPC Executive Committee during meetings held at the American Pork Congress, Kansas City, Missouri.

Elected to serve with him as vice president was Wayne Walter of Sublette, Kansas.

Saunders will serve as head of the 100,000 member NPPC for one year. He has served as NPPC vice president since 1979 and has been on the national Board of Directors since 1976.

Saunders was chairman of the NPPC Market Development Committee and served on the NPPC Budget Committee. He is

also an Executive Committee member of the U.S. Meat Export Federation.

Saunders is in partnership with his father on a diversified operation of 600 acres of grain and pasture and a 120-sow farrow-to-finish hog operation. John and his wife, Jeanne, have two sons, Lyle, 13, and Mark 10.

Outgoing president Bill Buller of Brookings, South Dakota said, "I wish John the best of luck in his challenging new position and I'm sure pork producers of the nation will stand behind him. I know he was invaluable as vice president during my two years as president."

Walter will serve as second in command of the NPPC for two years. He served as Chairman of the NPPC Checkoff Committee

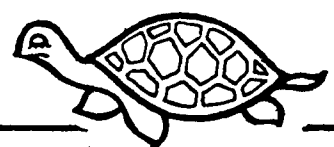

and as a member of the Executive Committee since 1980.

He is active in community affairs, including membership on the Sublette Chamber of Commerce, a trusteeship with the Manhattan Christian College, and as an elder in his church. Walter also serves as an agriculture advisory council

member for the Garden City Community College.

Walter operates an 800-sow farrow-to-finish confinement operation, known as Walter Farm Enterprises, Inc. Walter and his wife, Elaine, have two children; Brad, 22, and Kristi, 21.

Marks tenth anniversary

ROHRERSTOWN — Pennfield Corporation, with headquarters in Lancaster County, marked its tenth anniversary on Sunday, having been created in March 1, 1971 by the consolidation of two century-old companies, Miller & Bushong, Inc. of Rohrerstown, and D.E. Horn & Company, Inc. of York.

The agri-products company is active in all phases of feed, egg, and poultry production, processing and marketing. The 1980 sales figures hit the \$130 million mark.

These three segments of the company are represented respectively by: the Feed Production and Marketing Division, located in Lancaster; Pennfield Farms Egg Division, located in Ephrata; and Pennfield

Farms Poultry, located in Fredericksburg.

Pennfield manufactures and sells nearly 100 types of dairy, poultry and livestock feeds. Production takes place at automated mills located in Rohrerstown, York, Red Lion and Palmyra. In addition, the newest high volume mill is located in the Hempfield Industrial Park, Lancaster. Last year feed production topped the half-million ton mark.

Pennfield Farms chicken is produced at Pennfield's processing plant located in Fredericksburg. During 1980, over 48 million pounds were dressed at that location. In addition to sales in New York State and Boston, last year much of that chicken sold in Pennfield's home

counties, based on a recent merchandising campaign for the Pennfield Farms brand name Broiler Industry recently listed Pennfield among the top 60 broiler producers in the U.S.

Pennfield Farms Egg Division, Ephrata, produced 275 million eggs last year with major markets in the metropolitan area — Philadelphia, New Jersey, and New York.

The Allied Division of Pennfield Corporation, headed by Donald E. Horn, is comprised of Beachley-Hardy Seed Company, Shiremanstown; Palmer Green Company, Shippensburg; and J. Brame Witmer Fuel Oil Company in Lancaster. Under the Hardy name, Beachley-Hardy sells patented brands of corn, small

Farm Business News

grains, and grass. They are the distributor for Waterman Loomis alfalfa seed, and they service dealers throughout Pennsylvania, New Jersey, and the Northeast. Beachley-Hardy also specializes in crown vetch for highway banks.

Palmer Green Company is an allied products company with a distribution covering ten northeast states and specializing in products such as bone meal, mineral blocks and salt blocks.

J. Brame Witmer is Pennfield's

heating oil division. This company services and installs home and industrial heating systems in Lancaster county.

Currently Pennfield employs over 700 people and of that total more than 300 are employees of Pennfield Farms Poultry in Fredericksburg.

A privately-held corporation, Pennfield is headed by a Board of Directors with Ernest O. Horn, Sr. as Chairman of the Board, and Robert B. Graybill as President.

THERMA•STOR HEAT RECOVERY SYSTEM

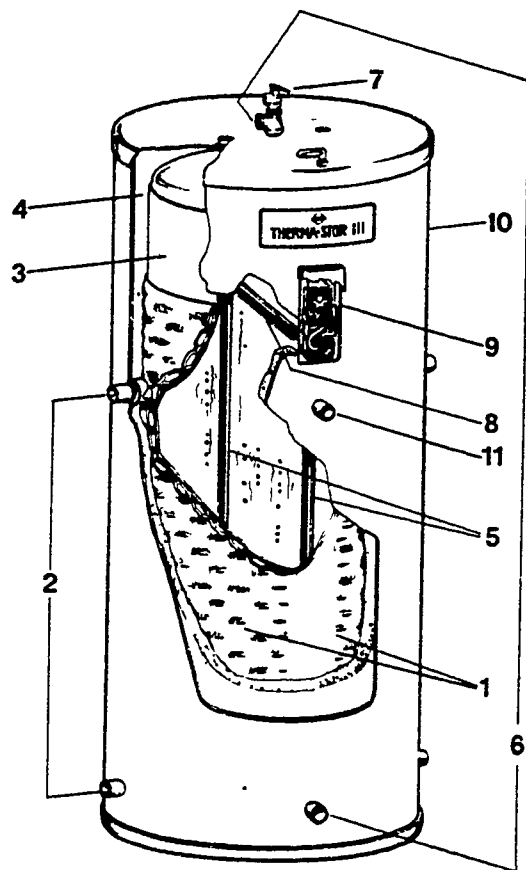

BY

DARI-KOOL

- With no end in sight for skyrocketing energy costs, wise dairy farmers are investing in the very best in energy-saving equipment.
- Make enough FREE HOT WATER to meet every hot-water need of almost any milking operation

Ask About The THERMA•STOR III Heat Recovery System

Features:

- 1 Vertical dual circuit de-superheater plate welded and expanded for internal refrigerant passage
 - 2 1 3/8" refrigerant inlets and outlets
 - 3 Industrial glass lined hot water storage tank
 - 4 1 1/4" Foam-in-place urethane insulation
 - 5 Dual anode protection against corrosion for extended barrel life
 - 6 Water inlet and high-temp outlet are 1 1/4" male Npt
 - 7 150 PSI and 210°F pressure/temperature relief valve
 - 8 4500 watt low density electric heating element
 - 9 Adjustable thermostat (110°F 170°F) controlled heating element
 - 10 Attractive enameled galvanized external wrapper
 - 11 Medium temperature water out

Manheim Young Farmers hold banquet

MANHEIM — The Manheim Young Farmers' Annual Spring Banquet was held on March 20 at the Mastersonville Fire Hall.

The program was highlighted by the meal catered by Mr. and Mrs. Roy Sauder. Due to a change in advisors over the summer, there were no awards given within the chapter for competition, but there were some appreciation awards given.

The plaque was presented to Stauffer Chemical Company for the meal served to the chapter at the February meeting. The plaque was presented to Wayne Marz, who

represented the company at the meeting.

A certificate went to Kreider's Restaurant and a flowering plant to Lisa Martin. Miss Martin is a senior at Manheim Central High School and a participant in many activities in and out of school. She received these awards as a thanks from the Young Farmers Chapter for doing all the typing of newsletters and other material.

A trophy was given to the Young Farmer Volleyball team consisting of Dudley Rohrer, Joy Wissler, Ken Gingrich, Steve Hershey, Jerry Whitmer, Kevin Rohrer and

Joe Snavey. This team placed second in a tournament at Harrisburg on March 7.

Also, decorated candles were given to Ruby Bollinger and Alma Wenger for preparing things for the banquet.

Other activities of the banquet included the introduction of officers and guests. Dr. William Opdenhoff, assistant superintendent of Manheim schools, gave greetings from Manheim Central School District. Barry Geib, FFA president, brought remarks from the Manheim FFA. Recognition of patrons and door prizes were also

on the agenda. Entertainment was supplied by Rufus Brubaker who showed a slide presentation.

New officers elected for 1981 are Earl Geib, president, Bob Keller,

vice president, Clyde Peters, secretary; Dale Hawkins, treasurer; and Steve Hershey, public relations. Charles Bechdel Jr. is the new advisor this year.

Officers of the Manheim Young Farmers include, from the left, Steve Hershey, public relations; Earl Geib, president; Dale Hawkins, treasurer; J. Robert Keller, vice president; Clyde Peters, secretary; and Charles Bechdel Jr., advisor.

Receiving awards at Manheim Young Farmers banquet are, from the left, Wayne Marz, representative of Stauffer Chemical Company; Lisa Martin, Chapter typist; and Joe Snavey, representative of the volleyball team.

Book available on beekeeping

BELTSVILLE, Md. — Bees produce over 250 million pounds of honey in the United States annually but this achievement is minimal contrasted with their importance as pollinators of over ninety crops, according to a recently revised USDA publication, "Beekeeping in the United States."

This 193-page illustrated publication is a rich information source ranging from the history of beekeeping in the United States to world production and trade in honey.

About 200,000 people keep almost five million colonies of honey bees in the United States, according to the handbook. Beekeepers derive income from the sale of honey, the renting of colonies for crop production, production and sale of queen bees and packaged bees, and to a lesser extent, from the sale of beeswax, pollen, propolis (bee glue), and royal jelly.

This handbook provides readers with a better understanding of beekeeping in the United States.

Some topics discussed are the life history of the honey bee, behavior, breeding and genetics of honey bees, bee nutrition, and supplemental feeding. The book also contains a listing of beekeeping organizations, some statistics on bees and honey, and a listing of nectar and pollen plants by region.

A chapter on pollination of crops explains that many fruit crops, legumes, vegetables, and oilseed crops depend upon insects for fruit or seed production. Two chapters discuss the difference between managing bees for high-honey yields and managing them for crop production.

For example, large colonies are best suited for honey production, but small, uniform colonies are the easiest to manage for crop pollination.

Prevention of death of bees in hives is discussed in a chapter on diseases and pests by H. Shumanuk, Chief of the Bioenvironmental Bee Lab at USDA's Beltsville Agricultural Research Station. This chapter explains how

to recognize problems and suggests control measures for many important pests.

The new publication offers advice for the beginning beekeeper about honey removal, processing, and packing, as well as suggestions about preparing for competition at fairs. And for the professional beekeeper, there are chapters on honey price supports and marketing aids.

"Beekeeping in the United States," Agriculture Handbook Number 335, was prepared by USDA's Science and Education Administration. It is for sale at \$6 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Breeder flock course registration closes Friday

DELMAR, Md. — This year's Delmarva Hatchery and Breeder Flock Management Short Course will be held at the DelMarva Convention Hall in Delmar, Md., on Wednesday, April 8.

The program starts at 8:45 a.m. and includes talks and panel discussions on pullet management, sanitation and maintenance of hatchery debeakers and vaccinators, a review of hatchery egg breakout, breeder hen management, monitoring for flock health, animal welfare, and an update on breeder vaccines.

The afternoon session will adjourn at 3:40.

The course is sponsored by the Eastern Shore Hatchery Association, Delmarva Poultry Industry, Inc., and the Delaware Cooperative Extension Service. The registration fee is \$12 per person.

For further information or to register call extension poultry specialist George

Chaloupka at the Georgetown Substation, University of Delaware (302/856-5250). Deadline for registration is April 3.

The new shift to Yanmar.

There's one very simple reason why your new compact Diesel tractor should be Yanmar: we offer you features you can't get from anybody else.

Exclusive Power Shift

The shift is on to Yanmar — because Yanmar has the shift — the power shift no other compact diesel tractor offers.

The Yanmar Power Shift lets you shift on the go without clutching. Yanmar's power shift gives you the ease of automatic without the 25 to 30% power loss of hydraulic or hydrostatic type transmissions. You save time. You save effort. Every working hour becomes more productive. More rewarding.

Live PTO (Power take-off)

With a regular PTO your attachment is not driven unless your tractor is moving. That means uneven work until your tractor gets up to operating speed.

Yanmar's 2 speed Live PTO keeps your attachments moving at full power even when your tractor is stopped. You get more consistent work and sure going through the toughest spots.

Diesel Economy

As the world's largest manufacturer of small diesel engines, Yanmar gives you time-tested, fuel-squeezing diesel economy. Smooth, quiet running Yanmar Diesel power means no electrical ignition system to go out of wack, no spark plugs to replace — and above all, lower fuel bills.

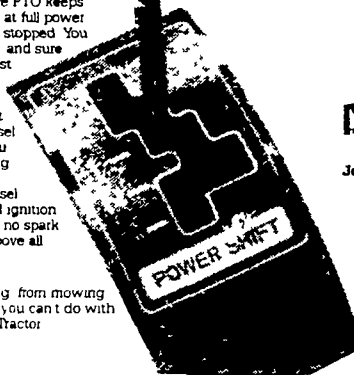

Versatility

From tilling to plowing, from mowing to hoeing, there's nothing you can't do with a rugged reliable Yanmar Tractor.

Dependability

Performance proven in the toughest jobs around the world, Yanmar Tractors are built to last. And last.

Join the new shift to Yanmar, and find out what a compact diesel tractor should be.

Join the new shift to Yanmar

Soil conditioners little help except under wet conditions

UNIVERSITY PARK — Liquid soil conditioners, a group of new compounds available to farmers and gardeners, are claimed by their manufacturers to improve poorly drained soils especially in early spring.

"It may be helpful for farmers to include a liquid soil conditioner on a trial basis when spraying in the spring with a weed killer — applying soil conditioner and herbicide in one operation," stated Dale E. Baker, soil chemist in the College of Agriculture at Penn State.

He said it is not possible to make a blanket recommendation for using liquid soil conditioners.

Such soil conditioners may be helpful under very wet soil conditions and should also be helpful on water-repellent soils and thatch residues on turfgrass such as lawns and golf courses. Otherwise, the soil conditioners tested at Penn State showed little, if any, benefits.

When used on poorly drained soils, the liquid soil conditioners should be applied according to the manufacturer's recommendations on the label, it was pointed out.

"Claims for these soil conditioners generally include the ability to lower the surface tension of water, making water wetter," Baker commented. "This is a valid claim, based on our experiments," he added.

He suggested leaving the soil conditioners off at least one 50 to 100 foot strip — preferably two or three strips across each field — to observe any differences in crop response.

The experiments with liquid soil conditioners were carried out by Betsie Blumberg and Christina Hunt, graduate assistant and research assistant in agronomy, respectively.

Since poorly drained croplands are not widespread in the Commonwealth, Blumberg and Hunt

believe that such soil conditioners will not be helpful under most field conditions in the Commonwealth. They remind land owners that soil conditioners do not provide plant nutrients or increase soil fertility.

Ms. Blumberg carried out experiments on soybeans last summer. She compared three liquid soil conditioners, applied at the recommended rate and 10 times that rate. The plots were irrigated with about two inches of water to test the effect of the

conditioners on water penetration and seedling emergence.

Twenty-four hours after irrigation, soil samples were collected from each plot to measure soil water retention in the surface soil. Treated and untreated plots ranged from 18 to 21 percent moisture — not significantly different.

After the soybeans emerged, plots were selected at random and the number of plants per plot was counted and averaged. Again, soil

conditioners had no effect under the conditions of the study.

At harvest, yields of 40 to 45 bushels per acre were obtained on all plots with no significant effect from treatments.

Baker said there is a need to be concerned with the ultimate fate of conditioners in the soil. If they are not held at the surface of soil particles, they can be leached out by rainwater or can be broken down by microbes in the soil.

"The rapid growth of soil microorganisms in our experiments suggests that the conditioners will be broken down rapidly when the soil is above 50° Fahrenheit. This reduces claimed benefits as well as the potential to contaminate ground water," Ms. Hunt commented.

The project is supported in part by Fair Funds administered by the Pennsylvania Department of Agriculture.

Delaware student wins national agronomy award

WILMINGTON, Del. — Philip M. Jardine, a senior major in agronomy at the University of Delaware, has been selected for recognition by the American Society of Agronomy under its National Agronomy Senior Recognition Program.

Purposes of the program is to identify outstanding students in this field at institutions throughout the U.S.

This is the first time a Delaware student has been named for the award.

Any student with senior status in crops, soils and related fields who is a member of an active agronomy chapter affiliated with the American Society of Agronomy is eligible. Candidates are selected by a committee of faculty members at each participating institution on the basis of scholarship, leadership and personal traits.

Jardine is a degree with distinction candidate doing basic soil-related research in the department of plant science.

According to his advisor, soil

Agronomy major Philip M. Jardine has been honored by American Society of Agronomy under its National Agronomy Senior Recognition Program. This is the first time a Delaware student has received the award.

chemist, Donald L. Sparks, he epitomizes the qualities of competence and dedication looked for in an outstanding student. Last fall Jardine presented a paper of his research at a national meeting of soil scientists — an unusual achievement for an undergraduate. His presentation was authoritative and well-received by experts in the field.

Jardine grew up in Wilmington and was graduated from Concord

High School, where he became interested in chemical research.

With his advisor he has co-authored an article based on his study of the mechanics of potassium exchange in two Delaware soils. The article is soon to appear in a scientific journal.

After graduation he plans to remain at the University of Delaware and work towards a master's degree in soil chemistry.

Attend open house

Several hundred farmers attended the open house last Friday at Leroy and Joyce Bupp's Bupplynn Farms, R2 Seven Valleys, to see the new herringbone stanchion barn which was featured in the March 14 Lancaster Farming.

We Need A Few Good Farmers To Grow POPCORN

- Requirements:**
- Located in 120 day growing area
 - Reasonably productive ground
 - Soil test and fertilizer to recommendations
 - 20 acre minimum
 - Ear harvest with conventional machine
- Benefits:**
- Delivery at harvest, our trucks or yours
 - Cash on delivery
 - Price competitive with field corn

Demonstrations Planned

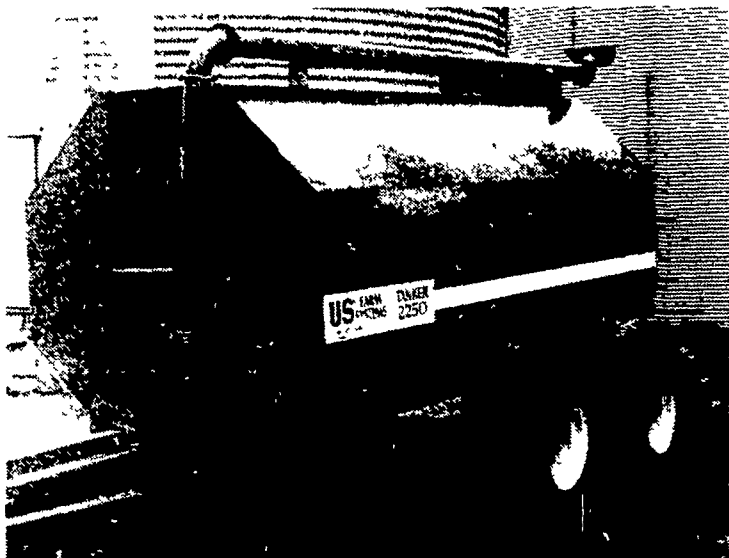

SEE THIS SLURRY PUMP PUMP THIS SLURRY SEA

Now the take-it-as-it-comes slurry brute manure pump is going public. In a series of on-the-farm demonstrations and field days across the state of Pennsylvania, this hefty lagoon and pit pump will be working to show you how to conquer manure handling problems under every day conditions.

You will see the 24 inch directional propellor displace up to 18,000 GPM. A self-cleaning knife chop bedding in the slurry. A strong 20 inch impellor load up to 2,500 GPM through a 6" fill pipe.

In test after test on the farm and in public demonstrations, the slurry brute meets the challenge. Meets the challenge so well that the manufacturers give you a full year warranty.

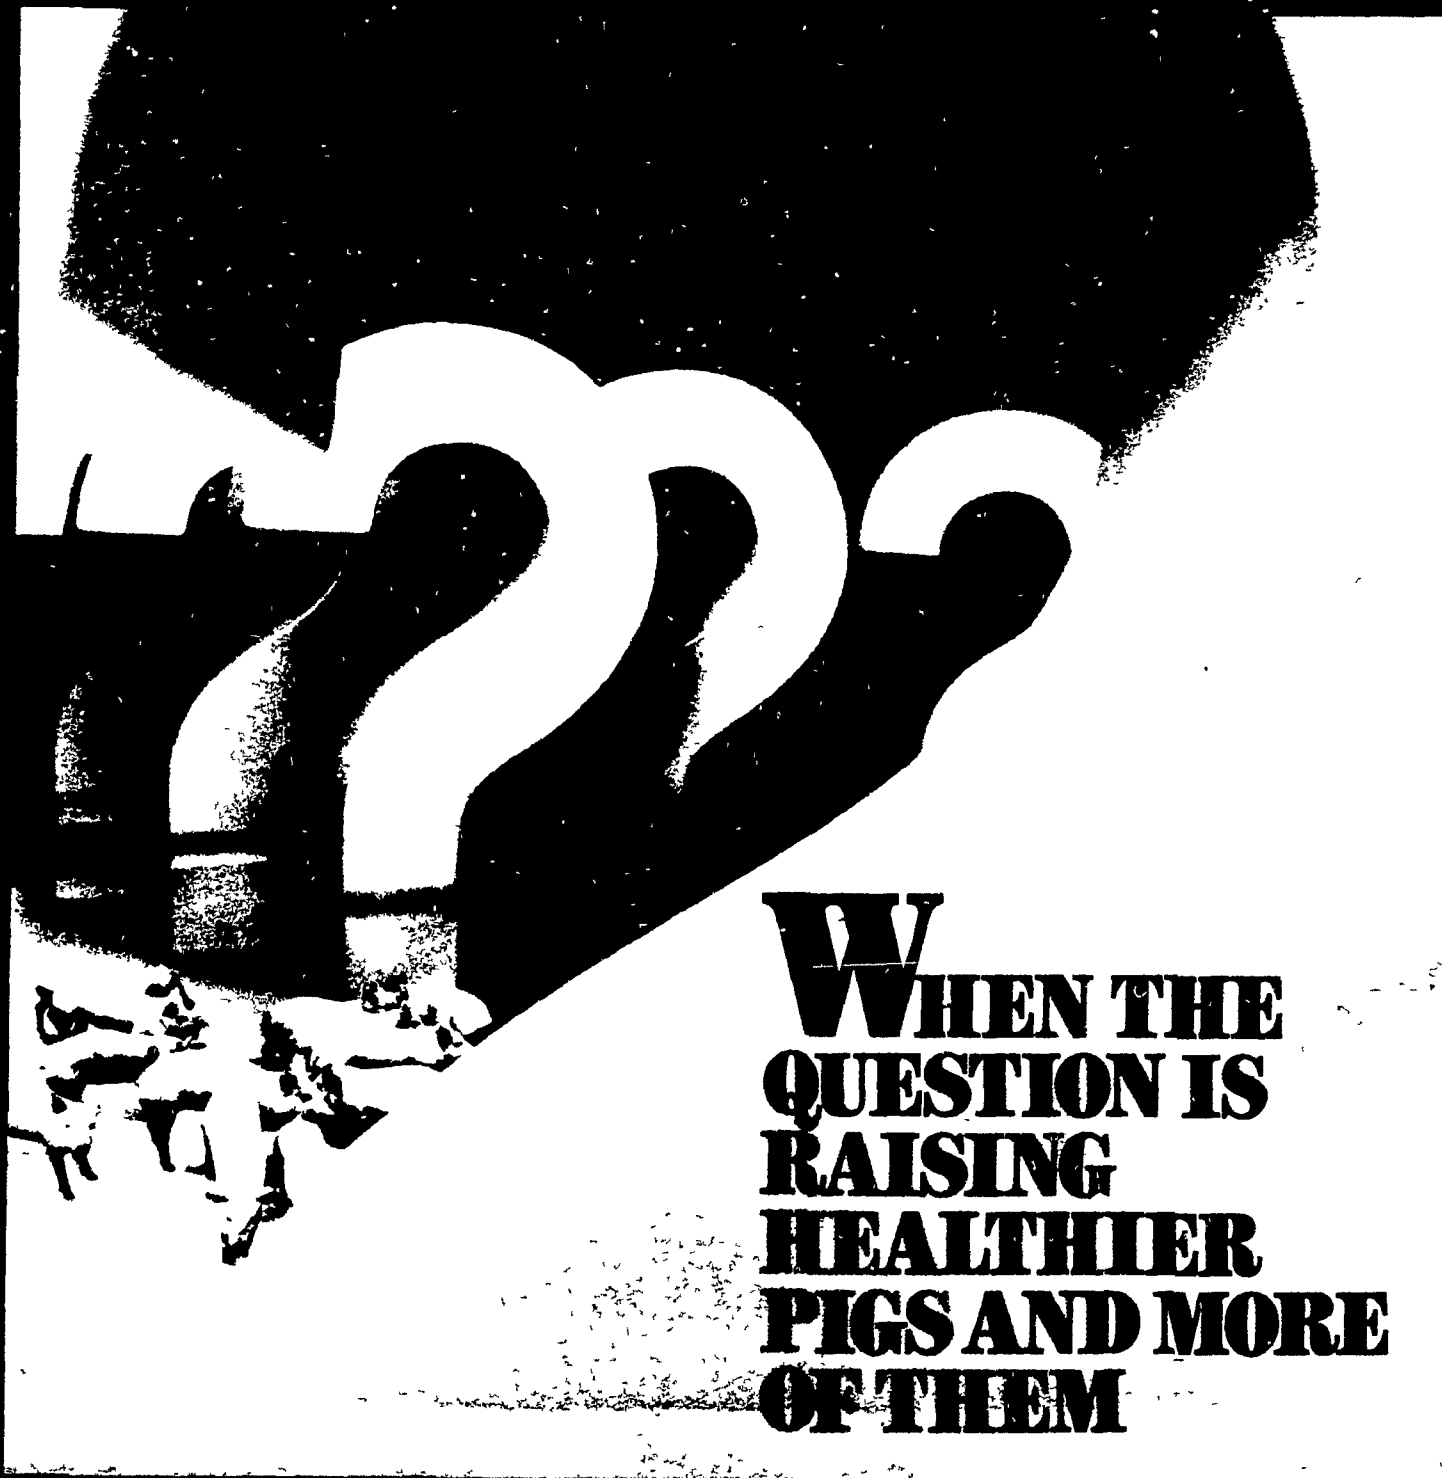

That's why if you're really serious about handling your liquid manure problems, see the slurry brute pump the slurry sea at one of the following farms near you: Or write: US Farm Systems of Pennsylvania, 4070 Blue Ball Road, Nottingham, PA 19362. Phone. (301) 398-2948.

See a true farmer's slurry wagon built tough to be tough on your farm. Available in several sizes. Can be mounted on a truck.

New Semi-Mounted No-Till Drill

- Seeds anything from alfalfa to soybeans, including grasses.

- Very maneuverable - seeds 10'-8", 8" spacings.

- Ideal for double-cropping and pasture seeding.

- Triple disc openers - coulter in front of a double disc to penetrate heavy residue. Single or dual packer wheels.

- Accurate seed rate is provided by meter control with infinite adjustment

- Standard ballast tanks add up to 1000 lbs. of extra weight to penetrate no-till fields.

No-Till Saves Tractor Time
And Valuable Fuel
Leaves More Moisture and Conserves the Soil.

Berks Dairy Princess finds time to teach, study, and milk

BY LAUREL SCHAEFFER
Staff Correspondent

WOMELSDORF — Ask just about any kindergarten, first, or second grader in Berks County who the county Dairy Princess is and chances are they will be able to tell you. And if by chance they can't remember her name is Karen Sattazahn, they probably at least remember meeting her.

Karen has visited over 1600 school children and will have talked to more than 2000 by the time she relinquishes her crown to a successor on April 25 at 7 p.m. at the Berks County Agricultural Center, Leesport.

The pageant has been moved to this new date because, through experience, June has proved too busy.

In previous years, many of the eligible candidates were too involved with high school graduation, finding summer jobs, or any number of other related activities. Also, members of the dairy princess committee found it was difficult to make public appearance arrangements for the Dairy Princess during June, which is Dairy Month, because one reign was ending and another beginning.

"This way, added Karen, "the new dairy princess will have more time to work on her scrapbook for the State Dairy Princess Contest."

Looking back over all of the activities and events Karen has attended as Berks County's Dairy Princess, she admits she enjoyed teaching children about milk and other dairy products the most.

Not only does Karen enjoy working with children, she also believes in teaching them, while they are young, the importance of dairy products in their diet.

"The kids go home and tell their parents how much milk they all should be consuming each day," Karen remarked.

Karen also has been active in promoting dairy products in grocery stores throughout the country.

"Handing out recipes and prepared samples which are made with at least one dairy product ingredient has been very successful," she said. "It's amazing how many people will ask where they can buy the product and will actually go to the dairy case and purchase the ingredients needed for the recipes," she continued.

Karen, the daughter of Mr. and Mrs. Clarence Sattazahn, RD Womelsdorf, said she feels strongly about promoting dairy products and educating the consumer about the dairy industry. She added she has been amazed by some of the questions her audiences have posed concerning dairy farming.

"Knowledge I have taken for granted because I have been raised on a dairy farm is new to many people I have talked to," she explained. "We don't have as much money to put towards dairy product advertising as other food industries have."

However, she said she feels the use of the "REAL" sticker, now being placed on genuine dairy products will help.

"I believe many consumers are fooled by imitation products on the market today," she said.

Karen, who is majoring in elementary education and library science at Kutztown State College, said her studies have helped her with teaching skills and dealing with children as well as helping her make good contacts. Karen will begin student teaching in the Fall and will graduate in December, 1981.

Scheduling her duties as dairy

princess and college student has worked out much better than she had originally expected, Karen confessed. Her grades actually improved, and she admitted she has learned to budget her time much more efficiently, scheduling appearances during breaks, weekends, and holidays.

Karen still finds time to work at home, helping with milking on weekends and holidays and doing other farm related chores as her time permits. The Sattazahns farm about 185 acres and milk 100 cows under the name Zahnheim Holsteins.

Karen has seven cows of her own, some raised as 4-H projects. She said she enjoys driving tractors best because she loves to be outside, but quickly added that other duties such as sketching calves for registration, and feeding also are enjoyable chores.

This dairy princess has been very active in many organizations and is now serving as a 4-H leader, youth chairman of Marion Grange, director of the Berks County Junior Holstein Club, a Sunday School teacher, and president of Kutztown State College Circle K Chapter.

She said she firmly believes that her 4-H background and the many workshops setup by the dairy princess committee before the pageant last year has helped her prepare for her role as Dairy Princess. Karen noted she enjoyed going to the State Pageant, because she had the opportunity to learn more about the dairy industry and her role as a dairy spokesperson, as well as renew old friendships.

Karen said she hopes as many eligible contestants as possible will enter this year's pageant, adding it was such a rewarding experience for herself.

Girls between the ages of 16 and 22 who are daughters of dairy farmers or who own at least two dairy animals are eligible to enter. Activities for the contestants begin at 2 p.m. April 5 at Karen's home where they will have an orientation and a picture-taking session.

There will also be public speaking, poise, and beauty workshops to help prepare the contestants for the pageant. A mother-daughter brunch is scheduled for April 11. And an educational workshop will also be scheduled for the contestants at which time they will have the opportunity to learn more about the dairy industry and nutrition.

Karen stated her successor should make the most of opportunities, be herself and enjoy her duties.

"I found talking before groups gets easier once you've seen people are interested in what you have to say," Karen remarked. "It's the waiting before your appearance that is the worst."

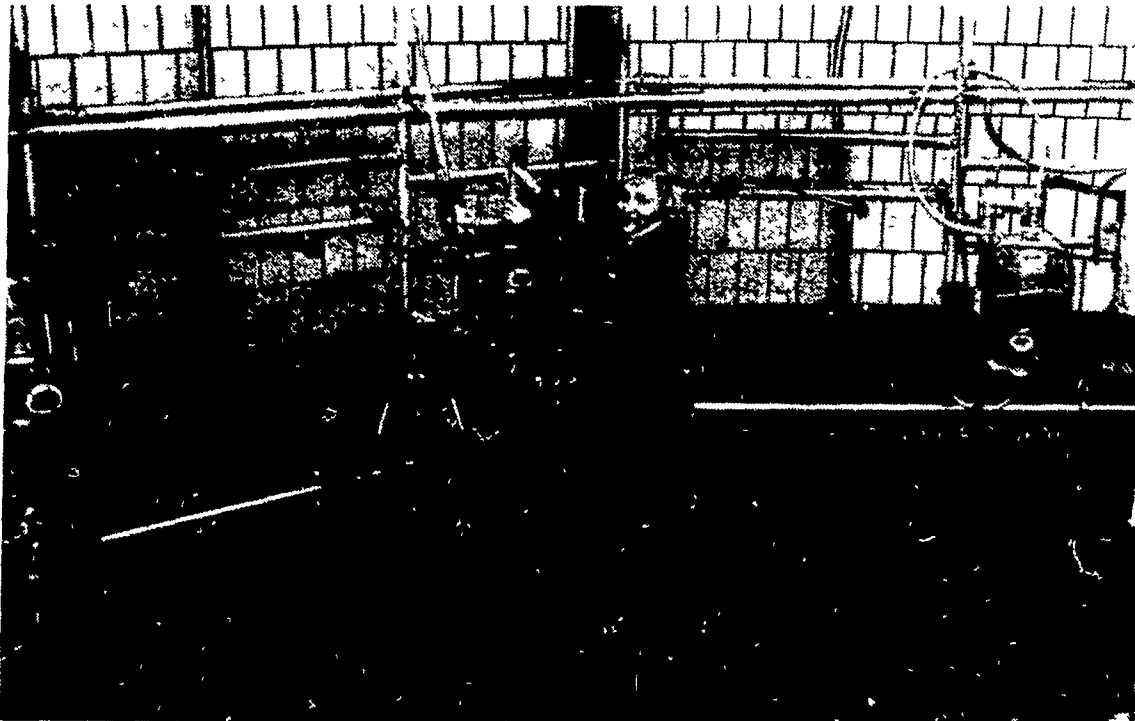

For information on the dairy princess pageant contact Karen at 215/589-2680, Phoebe Bitler at 215/944-0541, or Vernetta Myers at 215/756-6436.

Here are two of Karen's favorite recipes, the first a family favorite for years — handed down for several generations.

Strawberry Fluff

6 ounce package strawberry gelatin
1 cup whipping cream
1 cup strawberries
1 cup miniature marshmallows

Prepare gelatin, chill and set. Whip cream and fold into gelatin. Fold in strawberries and marshmallows. Makes 4 to six servings.

Among her on-farm duties are feeding heifers and getting the eight-head Carousel milking parlor ready for the evening run. Berks County Dairy Princess Karen Sattazahn

emphasized how much she likes the merry-go-round setup, noting it is much faster and easier to clean.

Berks County Dairy Princess Karen Sattazahn takes the measure of production from the farm bulk tank. As dairy princess, Karen

has spent a great deal of time off the farm, too, visiting local elementary schools.

Scalloped Potatoes in Cheese Sauce

6 potatoes, sliced
1 onion, chopped
2 teaspoons salt
ground pepper, dash
3 tablespoons butter
2 tablespoons flour
2 cups hot milk
1 cup grated American Cheese
parsley flakes

Melt butter in double boiler. Add flour, seasoning and stir until smooth. Slowly add hot milk, stirring constantly. When it thickens melt the grated cheese in the sauce. Put layers of sliced potatoes, onions and cheese sauce into buttered baking dish or casserole, repeating until all ingredients are used up. Sprinkle parsley flakes on top. Bake 1 hour at 350 degrees. SERVES 6.

Karen Sattazahn works on her Berks County Dairy Princess record book - another of the important functions of the dairy princess's job.

Roll your own profits with a Badger Roller Mill

Roller grain is better. Whether you're feeding beef, dairy, hogs or poultry you'll get more from your grain with a Badger Roller Mill. Here's why: Improved palatability and digestibility eliminates digestive disorders of hammer-milled grains producing dust and flour. This also avoids feed waste and respiratory ailments. Provides more gain from less grain and the most energy efficient method of processing all types of feed.

And Badger Roller Mills are versatile units that will fit into your operation for years to come. Their bolted construction will adapt to various installations as your needs change. Kits are available to convert to trailer skid and other roller mill uses.

Contact your Badger Dealer now. Talk to the man who knows what it takes to get super feed efficiency with a Badger Roller Mill.

CHEESE

WIC BEDDING CHOPPER

No Competitor Can Beat The WIC CHOPPER For Performance And Cost

The Wic bedding chopper chops straw, hay or corn fodder and spreads it uniformly under your cows, all in a single operation. When you use chopped bedding, you save on straw and your cows stay much cleaner. On top of that, cleaning up is a breeze...

All models of Wic's bedding chopper have four rows of knives insuring a better spreading action.

Wic has also foreseen an adjustable grill in 5 positions to avoid overloading the motor while using different bedding such as damp straw, old hay, etc.

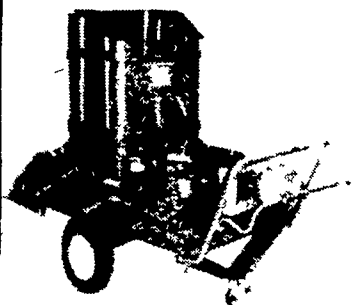

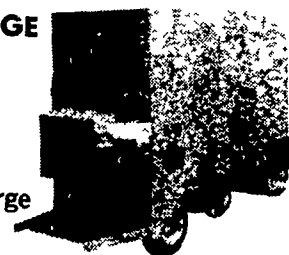

With a simple adjustment that either speeds up or reduces the rotation of the tub, you can cut the bedding to the desired length. Wic the futuristic chopper now!

FRAME steel monocoque paint
BARREL plastic 3/16" thick
WHEELS 2 pneumatic of 16"
WHEELS 1 swiveling
BRAKE on wheel swiveling
CAPACITY 1 bale/50 seconds approx
DIMENSIONS width 31" (80 cm) (with out handle) length 45" (115 cm)
DIMENSIONS height 55" (140 cm)
WEIGHT 440 lb (200 kg)

WIC MOTORIZED SILAGE WAGON WITH HYDROSTATIC SPEED CONTROL

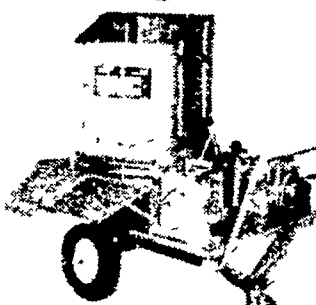

- ★ Regular Feed Discharge or 40" High Feed Discharge
- ★ Electric or Gas Operated

ELECTRIC BEDDING CHOPPER

Wic also makes an electric 200 volt a.c. chopper or a 24 volt d.c. battery operated chopper including an automatic charger. These two models are equipped in the factory with a manual starter panel and are protected by fuses to diminish risk of accidents.

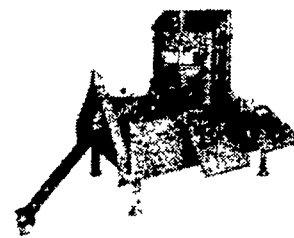

Very quiet, these bedding choppers are mostly used on small or medium sized farms. As well as being mobile, the 220 volt a.c. model can be installed stationary. Motor 220 volt a.c. 3 h.p. 24 volt d.c. 2 1/2 h.p.

GAS BEDDING CHOPPER

The gas powered bedding chopper is the most popular on the market. Its operation is simple and it handles easily. Equipped with a Honda 4 stroke gas engine, the Wic bedding chopper insures maximum output while in use.

Motor 5 7 or 10 h.p. 4 stroke Honda
Starter 5 h.p. manual and 7 and 10 h.p. manual or electric start

POWER TAKE OFF BEDDING CHOPPER

Wic has perfected a three point hitch PTO chopper activated by the power of your tractor. Easy to install, it is ideal for free-stalls or in strawberry fields for mulching purposes.

Brief answers
to short questions

Sheila's Shorts

By Sheila Miller

The 'real' thing?

With all the imitation this-and-that's floating around the market place these days, it's hard for consumers to know what is real and what is fake.

Sometimes, as long as there is a trace of a natural product included in an otherwise totally synthetic material, the manufacturer labels the product under the guise of Mother Nature.

And many times you have to look closely at something, take shoes for instance, to even realize what you're buying is man-made.

Just recently, my husband was trying on some work boots which looked and felt like leather. But, when we looked inside the boot we read 'All Man-Made Materials.' I guess we should have been tipped off by the price tag — but, then again, everybody is glad to get a 'real' bargain.

In the food department, it gets a

little tougher to actually see what's imitation, unless the manufacturer spells it out in bold letters on the package. As a result, industries, like the dairy industry, have come up with labels, like the ADI's REAL seal, to identify those products that use strictly milk and milk byproducts as ingredients.

What about clothing? Manufacturer's labels generally spell out what percent of the material is synthetic. But what about homemade materials — like wool spun and woven into gorgeous yardage?

That was a question I received from Ellen Utermohlen.

She writes:

I weave and use wool from our own flock and would like to use the Woolmark logo on the tag of the finished product.

How would I get permission to use it?

I wrote to the Wool Education

Center in Denver — with no response. I surely wouldn't want to do anything illegal in using it without permission. But how do I go about finding out what is legal and what isn't?

To try and find an answer for you, I checked with Joan Lesau of the Pennsylvania Department of Agriculture to see if she might know where you could get permission. Joan raises sheep and is quite involved in shearing, spinning, and weaving.

She referred me to Gwen Keck of the American Sheep Producers Council (303/399-8130). Gwen, who is with the American Wool Council, informed me the Woolmark is a licensed trademark of the International Wool Secretariat, U.S. Division Wool Bureau.

In order to use the trademark, your business must be licensed with the Wool Bureau. For more information on how to obtain a license, contact Tom Haas, vice president, 360 Lexington Avenue, New York, New York, 10017, 212/986-6222.

I hope you have more luck reaching him than I had — he must be a busy man.

Clean up your act

Normally, I don't bother to answer anonymous questions from readers. But this week I'm making an exception.

The letter, written March 11 on a

sheet of yellow paper, read:

On Wednesday, March 11, I visited the Leesport Auction.

As I was sitting there for about one hour, I saw calves being dragged across the ring. A 100-pound pig was dragged into the ring and nobody would buy it because it was 90 percent dead.

All kinds of deformed and ruptured pigs — one 500 pound steer with its rectum hanging out — the ring floor was so dirty, it wasn't cleaned for a couple of weeks.

Farmers were buying heifer calves to take back to the farm. God knows what disease they took back.

How come there is no state inspection of these places?

After what you saw that Wednesday, I can understand why you feel there is no inspection being done. But actually there is — both state and federal — obviously with room for improvement.

I spoke to Dr. John Moore, chief veterinarian of the federal Animal Plant Health Inspection Service in Harrisburg concerning the letter. He informed me the APHIS field personnel support the Pennsylvania Department of Agriculture's staff in carrying out inspections of local livestock markets.

Unfortunately, he pointed out, there are far more auction barns than inspectors.

Auction yards operate at a fast

tempo — there's a lot of scurrying around and slamming of gates, Moore said. And, some farmers attempt to salvage their animals that are sick or worn out with callous disregard.

It's like the old machine that starts balking when you go to start it — it soon goes to the junk yard if it takes too much time to fix. It's the same in the livestock industry — we have good and poor mechanics.

Dr. Max VanBuskirk, chief veterinarian for the state's Bureau of Animal Industries, explained there are regional employees assigned to inspect the auction yards throughout the state. But, he added, they can't be at every auction, every day.

When our inspector sees animals like those described in the letter, they're supposed to tag them and see they are disposed of properly, he said.

Both veterinarians encouraged anyone noticing these conditions at auction barns to report the incidents to either their regional offices or to the state offices in Harrisburg.

In the case of auctions in southeast Pennsylvania, reports should be called into the Lansdale Regional Office at 215/368-3000. The Bureau of Animal Industries telephone number is 717/783-5301, and the APHIS office can be reached by telephoning 717/787-5101.

Anything other than BAYMIX® Crumbles is only a one-cow solution to a whole herd problem

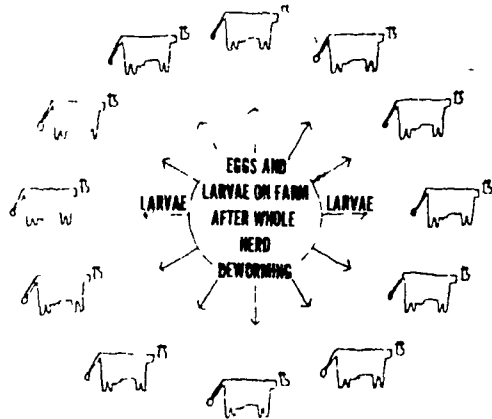

THE LOGIC BEHIND WHOLE HERD DEWORMING

In an unwormed dairy herd, all animals deposit worm eggs on the farm and all animals are subject to further recontamination from infective larvae as herd parasitism continues unchecked.

In a herd dewormed only at freshening, an average of 10 out of 12 animals have not been dewormed. Because egg deposition has not been significantly reduced, and because of infective larvae already present on the farm, all animals are subject to heavy further recontamination.

After whole herd deworming with Baymix, egg deposition is dramatically reduced, and as a result herd recontamination is also significantly reduced with herd productive efficiency maintained. In fact, a recent study shows a benefit of 4.8 lbs./milk/cow/day average when cows are dewormed as late as 200 days into lactation despite the fact they were dewormed at freshening.

**BAYMIX IS AVAILABLE AT
YOUR LOCAL NEW HOLLAND
SUPPLY DEALER**

Larger tobacco crop likely, but use may stabilize

LANCASTER — A further recovery of yields and acreage at the 1980 level could increase this year's U.S. tobacco crop about six percent above last year's 1.8 billion pounds.

A larger crop would offset smaller beginning stocks and keep the 1981-82 tobacco supply about the same as this season.

Effective farm quotas for 1980 are down six percent for flue-cured and up 11 percent for burley. The quotas suggested that U.S. tobacco growers may keep this year's plantings about the same as the 916,000 acres harvested in 1980.

Because of increased prices for fuel and labor, production costs may rise as much as 15 percent from last season. Price support for eligible tobacco will be about 12 percent higher than last year because of the formula that reflects changes in prices farmers pay.

USDA likely will announce grade loan rates for the various kinds of tobacco before the marketing season begins.

Despite a larger 1980 crop, smaller carryin stocks pulled this season's domestic leaf supply down to 5.04 billion pounds, two percent below the previous year.

Total use of U.S. tobacco should remain close to 1980; however, by the end of the marketing year all-tobacco carryover stocks will still be down.

On January 1, stocks were slightly below a year earlier. By end of this marketing year (July 1 for flue-cured, October 1 for burley and other kinds), stocks should total about two percent below the 3.27-billion-pound carryin.

Last year's cigarette output, a record 714 billion cigarettes, increased one percent above 1979. Both domestic use and tax-exempt categories gained.

Also, consumption of smokeless tobacco products (chewing tobacco and snuff) grew again in 1980. Use of both smoking tobacco and cigars fell below a year earlier; another drop is expected this year.

U.S. smokers consumed 630 billion cigarettes last year, about 15 percent above the previous year. Consumption per adult remained about the same as 1979 — 196 packs. Total cigarette use may remain steady this year, as increasing population offsets reduced per capita use.

Exports of U.S. tobacco leaf and products increased 13 percent in

value last year to a record \$2.43 billion. Both manufactured tobacco exports and leaf exports rose in price and volume. Export weight of unmanufactured tobacco totaled 599 million pounds (272,000 metric tons) or 721 million pounds, farm-sales weight.

This year, exports will do well to maintain last year's level, because export grades of U.S. tobacco are in short supply.

Unmanufactured tobacco imports (duty paid) and the customs category 170.80 (tobacco manufactured or not manufactured, not specifically provided for) increased four percent to 394 million pounds (179,000 metric tons) last year. Cigarette leaf and stems accounted for the gain.

Imports have risen in recent years, last year representing about three-tenths of the tobacco used in U.S. cigarette production. A similar proportion is likely this year.

The International Trade Commission is investigating the need for import restrictions on tobacco and will hold a public hearing on May 11.

Flue-cured tobacco disappearance in the current marketing year will probably drop from last

year's 1.08 billion pounds. Both exports and domestic use may decline slightly.

With the larger 1980 crop, mid-year carryover may rise about one percent from last season's 1.96 billion pounds.

Production this year should drop slightly from last year's 1,085 million pounds, assuming the crop is average size in relation to the effective quota.

With first-quarter use stabilizing, this season's total disappearance of burley tobacco may change little from last year's 632 million pounds.

Auction sales, ending in early March, indicated a 1980 crop of about 555 million pounds, up 109 million from 1979's unusually short

crop.

Burley carryover next October 1 is expected to drop eight percent below a year earlier.

USDA set this season's burley marketing quota at 661 million pounds, 7.5 percent above last year. The farm quota, which reflects 1980's undermarketings, totals about 850 million pounds, 80 million pounds above last season's effective quota. Burley production is expected to increase.

Acreage allotments for Virginia flue-cured, dark air-cured, cigar binder, and Ohio cigar filler are the same as last year.

Kentucky-Tennessee flue-cured allotments were reduced five percent. Each type registered price increases for the 1980 crop.

Jersey enters Hall of Fame

COLUMBUS, OH — A Registered Jersey cow owned by Mr. & Mrs. Emmett W. Rhein, Pine Grove, has entered the Jersey Hall of Fame. Hall of Fame certificates are awarded by The American Jersey Cattle Club for cows on official DHIR test and producing a minimum of 20,000 lbs. milk and/or 1,000 lbs. fat in a single lactation of 365 days or less.

M.V.F. SUPERSTUNT DAISEY, officially scored Des-70%, is the daughter of Milestone Style Superstunt. She produced 21,010 lbs. milk and 897 lbs. fat in 365 days during a lactation beginning at 5 years, 9 months of age.

The high producer was bred by Rhein.

PUT MORE PROFIT IN YOUR ALFALFA.

Whether you grow for a cash crop or to feed your own livestock, you can't afford weeds in your alfalfa. They shorten stand life, lower protein content, lower TDN and reduce overall digestibility and palatability of your hay. In short, excessive weed growth just plain picks your pocket.

ORTHO PARAQUAT CL herbicide burns back weeds on contact. Apply PARAQUAT during the winter to dormant established stands. It's exceptionally broad spectrum and destroys weeds with extraordinary speed. Apply PARAQUAT with ORTHO X-77 Sprayer.

DANGER: PARAQUAT is highly toxic if swallowed and should be kept out of the reach of children. To prevent accidental ingestion, never transfer to food, drink or other containers. Read the label carefully and follow all directions, danger statements and worker safety rules.

Restricted Use Pesticide. Use all chemicals only as directed.

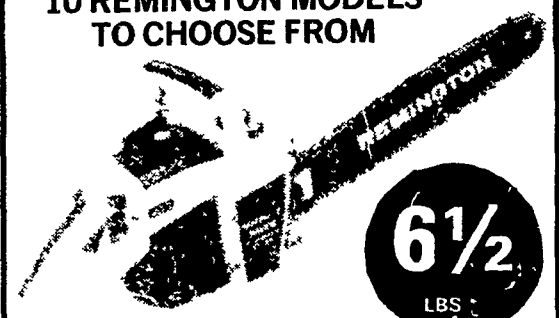

ORTHO PARAQUAT CL

P&S review neither complete nor meaningful says LMA

KANSAS CITY, Mo. — Despite "its avowed intentions," the U.S. Department of Agriculture's review of regulations and policy statements under the Packers and Stockyards Act is "neither complete nor meaningful," Livestock Marketing Association said recently.

The Trade Group's comments came in a statement filed with the Packers and Stockyards division of USDA. LMA officials also pointed out that this review should not be confused with LMA's recently announced campaign to thoroughly reform and modernize federal livestock marketing legislation.

The P&S regulatory review, now in its second year, has resulted in only four proposed revisions in the 131 sections of regulations and policy statements on the books

when the review was first announced, LMA said. The proposed changes:

—would change the definition of who administers the P&S Act, and would change the term "Area Supervisor" of the Act to "Regional Supervisor";

—would enlarge the scope of the current policy statement on packer sales promotion program; and

—would make slight changes in the formula used to calculate the amount of the bond required under the Act from fixed facility markets, dealers and packers.

This proposal, which LMA said would "generally result" in a bond increase, is deficient "in that it fails to address the two real issues of importance in bonding 'how the size of a bond relates to the risk involved, and how bond proceeds can be disbursed to injured parties

as expeditiously and efficiently as possible."

The "real significance" of this proposal is that it shows USDA still believes that livestock markets "are public utilities whose internal management and business practices are to be dictated by the federal government," LMA said.

The comments, filed on behalf of LMA by the law firm of Deas, Van Hooser, and Olsen, P.C., concluded by challenging USDA "to ensure that the need for, and the purposes of a regulation be clearly established, and that meaningful alternatives be considered and

analyzed before a regulation is issued.

"The mere rewording of a few regulations does not constitute a complete review."

In January, LMA launched a national campaign to replace Title 3 of the current P&S Act, which deals with the marketing sector, with updated legislation.

LMA's proposed legislation, said

General Manager C.T. "Tad" Sanders, "is a reform from the ground up, not just mere tinkering with current regulations. While we are going forward with our campaign, we will continue to use any means at our disposal — including filing comments on this so-called review — to bring the realities of the marketplace to the attention of federal regulatory officials."

There's a **Yetter** way of cultivation...

**The Yetter
Rotary Hoe**

More positive
weed kill...
more effective
chemical entrance

Spoon-billed teeth rake through the ground... shattering
crusty soil... kicking out weeds for sure kill... chemicals are
pushed into the aerated soil.
That's the Yetter way of cultivation... the Yetter Rotary Hoe
way!

The teeth are self-sharpening. Wheels turn on sealed ball
bearings, with less friction, less wear, less power needed.
There's only one 21" wheel per spring-cushioned arm to re-
duce stress, increase flexibility. Wheels follow ground con-
tours, roll over the rocks that break up other hoes. Individual
arms can swing up, out of the way, to match plant rows.

Look into the Rotary Hoe... the Yetter way of improving cul-
tivation... at your Yetter Dealer or write direct.

Livestock & Grain Bodies

Bigger Than Ever, Better Than Ever

Precision engineered roll formed 52"
high steel sides provide greater
capacity at less cost.

We've built rugged truck bodies for over 50
years and today we're continuing that tradi-
tion. That's the reason you can't make a better
investment than an Omaha Standard steel or
hardwood farm body.

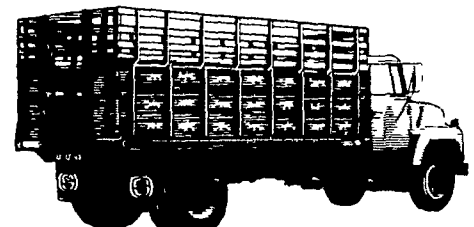

■ One-piece roll formed steel sides with built
in tarp rail. Available in 28', 40' and 52' extra-
capacity heights... all with maximum corruga-
tion for maximum strength.

■ 40' and 48' hardwood sides also available.
The truck body Omaha Standard built its
reputation on.

■ The toughest platform in the business—
laminated wood, smooth steel or tread plate.

■ Easy-conversion hardwood upper racks
greater flex and life than steel fold down racks.

■ A full line of rugged gates... all engineered
to make your job easier.

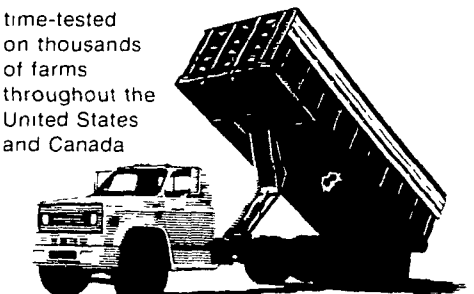

Omaha Standard Hoists

■ Seven precision-engineered scissor hoists
from 4 to 34 tons for bodies 8' to 24'.

Olympic Series twin telescopic hoists
with greater torsional stability for bodies 16'
to 24' and 15 to 43 ton capacity.

Omaha Standard bodies and hoists
time-tested
on thousands
of farms
throughout the
United States
and Canada.

Look to Omaha Standard for the best. Our
equipment takes all the punishment you can
dish out... and comes back for more year
after year. We stake our reputation on it.

We've been a part of successful farming and ranching for over 50 years.

Keep sows cycling

A reader asks:

What do you recommend to keep sows cycling properly in order to keep group farrowing schedules running smoothly?

Dr. Trayer comments:

One of the major problems in total confinement operations is the continuing active cycling of breeding stock after the weaning period.

We often find individual problems in herds that can be identified as management problems and corrected.

And, we do know a three week wean puts more pressure on the individual sow as far as getting the

animal cycled back, than a four week wean, that is waiting four weeks before weaning the sow.

My general recommendations in any intensified farrowing operation is that every objective should be made in the farrowing room to keep the animal in as good physical shape as possible. If she has farrowing problems, correct them and get them under control before she is brought back into the breeding area.

If she has MMA problems, a discharge, if she is low in body weight, increase her feed so she is consuming all she will eat and is putting on weight. If she is a thin sow and has a small litter, you may

consider transferring the pigs to another sow, weaning the sow early, and giving her extra feed in the farrowing area or gestation area so she can rejoin the group at a later time in good body condition.

My philosophy in weaning is enough stress to bring an animal into a good heat cycle three to five days after weaning. It has been questioned but not proven that a three week wean is possibly too early for the reproductive cycle of the sow.

Other methods used to make animals cycle include hormone shots, not the ideal situation.

In any given operation, you may have ten percent of the animals

Del. slates two swine health meetings

DOVER, Del. — Eight Delaware pork producers recently participated in a herd health survey aimed at helping local hog farmers improve profits. Three pigs from each farm were slaughtered and the carcasses examined for problems that affect production costs and performance.

The pigs were all healthy-looking specimens with plenty of muscle and low fat, but some cost more to produce than others. Where were these extra hidden costs and what

giving you problems. So when you're weaning a group of twenty, you can expect two to give you trouble by not cycling back properly. With that in mind, keep replacement gilts or previously non-cycling gilts available to make up the difference and work them into your schedule.

caused them? And how can producers prevent such losses?

Just one disease, atrophic rhinitis, can raise a grower's costs by \$16 to \$18 per pig.

How much AR was found during the survey?

State veterinarian Dr. H.W. Towers, who examined the slaughter hogs, will report his findings at two meetings early next month. The first will take place April 1 at 7 p.m. at the State Highway Department on route 113 in Dover.

Also on the program at both meetings will be Dr. Paul Meckley, university department of animal science veterinarian, and extension livestock specialist Richard Fowler.

Brawny four-wheel drive for tough demands

Advanced design

Here's the 4 WD power you need to work big implements, big acreage. Solid frame design and exclusive Case 4 way steering give you a basic advantage over articulated tractors. Proven high torque Case turbocharged diesels deliver solid high production power for continuous heavy duty field work. Case steering and top highway speed of 17.4 mph (28.0 km/h) save time on the road.

More traction

Outboard planetaries with adjustable wheel treads boost traction by putting weight where it can do the most good. Crab steering — included in exclusive Case 4 way solid state steering — gives you 4 track traction (8 track with duals) to fight side pressures and drift and keep you moving straight ahead.

4 way steering also lets you work hillsides and row crops the way other 4 WD's can't.

Powerful hydraulics

Case CONTROL hydraulic system provides super strong, super quick control of heavy mounted and trailing implements. permits multiple cylinder operation for up to 4 remotes.

12-speed range power shift

Case smooth working 12 speed range power shift permits on the go shifting without clutching to maintain most productive rate of ground travel. Also provides positive holdback on downgrades.

Big capacity brakes for positive control.

The Case-built cab

Many tractor manufacturers buy their cabs. The Case Silent Guardian cab is a totally integrated 4-post roll protected structure designed, tested and built at our own multi-million dollar cab manufacturing facility. It's not only the strongest but also the quietest, roomiest, cleanest, easiest to see from cab we've ever built.

Case 4 WD productivity advantages go on and on. Many more are covered in detail on the following pages.

Model 4490 210 engine hp (156 kW)
175 pto hp (130 kW) 153 db hp (114 kW)

Model 4890 300 engine hp (223 kW)
253 pto hp (188 kW) 224 db hp (167 kW)

Model 4690 261 engine hp (194 kW)
219 pto hp (163 kW) 195 db hp (145 kW)

Maryland Angus breeders hold annual meeting

LISBON, Md — The Maryland Angus Association is one of the oldest active Angus Associations in the county.

In fact, it may be the oldest as far as could be ascertained by Jerry Lipsey, Director of Junior Activities of the American Angus Association, St. Joseph, Missouri. Lipsey was guest speaker at the annual meeting of Maryland Angus Breeders held last Saturday at Lisbon, Maryland.

In their 51st year, the Association now numbers over 100 members and has an active Women's Club, Junior Association

holds two sales per year, an annual Breeders Show, annual Field Day, publishes a directory of breeders periodically, and sponsors numerous other activities throughout the year.

Lipsey painted a grim picture of the beef industry's problems but was still optimistic and enthusiastic.

"The first function of a beef producer," he told his audience, "is survival — and we have survived and we will survive, mainly because of the caliber of the people involved in livestock production."

The reason for his optimism

about the future of the industry is the young people. He charged breeders to meet the challenge of keeping our youth involved in spite of the constant outside pressures of our civilization and pointed to the many youth programs of the American Angus Association including heifer shows, the summer job placement program, and award programs.

He spoke with anticipation of the Eastern Regional Junior Angus Heifer Show to be held at the Montgomery County Fairgrounds in Gaithersburg, June 27 and 28, 1982, and the persistence of Maryland Angus Breeders that led to the choice of our state for the

Regional Show.

Highlighting the afternoon program was crowning of the 1981 Maryland Angus Queen, Karen Holloway, daughter of Mr. and Mrs. Richard Holloway of Darlington. Two Annual Awards were also presented as part of the afternoon program. The Augie Velisek Family of Woodbine, was presented the 1980 Maryland Angus Family Award and Bill Canby, Moreland Farm in Brookeville, was presented the 1980 Maryland Angus Breeder Award.

Dean Considine, Middletown, was elected to a second term as President of the organization and

Augie Velisek, Woodbine, to a second term as Vice-President.

Sam Riggs of Olney, was elected to fill the office of Secretary-Treasurer vacated by George Hodges, who retired after six years of service in that office to take on the job of Membership Chairman.

Five Directors were elected to three year terms. They are: Bill Canby, Brookeville; Dr. Lee V. Leak, Dickerson; Dr. Tom Michael, Woodsboro; Jim Weld, Rockville and Dick Whaley, Queenstown.

The next event for the Association is the Spring Sale May 22 at 7 p.m. at the Frederick, Md. fairgrounds.

Group asks legislation to cut ag's dependence

WASHINGTON, D.C. — The nation's largest farm organization today called for legislation that would make agriculture less dependent on government farm programs.

Speaking before the Senate Agriculture Committee, Robert B. Delano, president of the American Farm Bureau Federation, said that a market-oriented agricultural system should minimize the need for government intervention with price and income support programs.

Delano, a Virginia grain farmer, said a new four-year farm program should move away from dependence on target price, avoid support loan rates that would stimulate overproduction and protect farmers from any future commodity embargoes.

The farm leader said Farm Bureau generally accepts the farmer-held grain reserve concept

with reservations and favors administrative changes that would give market prices a wider range of movement to reflect supply and demand and minimize the impact of the reserves on market prices.

We believe a market-oriented agriculture is the most efficient means of production agricultural products and provides farmers with the greatest opportunity for economic well-being," Delano said. Farmers must be granted the freedom to produce for a profit, and government intervention should be eliminated to allow market forces to function.

Delano added that Farm Bureau, which has endorsed President Reagan's economic recovery plan, believes that any farm program is doomed to failure unless the government comes to grips with the basic problems of runaway federal spending and inflation.

Federal budget cuts shouldn't hurt soybeans

LITITZ — Farmers don't have to worry about the effects of federal budget cuts on soybean income. Soybeans are one of the few farm commodities that have escaped federally supported programs to manipulate price or supply.

There never has been a soybean target price, a federally-financed soybean reserve or a soybean set-aside program. In fact, federal net price support outlays for soybeans have been minuscule when compared to other crops.

There has not been a net federal price support outlay for soybeans since 1973.

Free to function in the free market, soybeans have become the nation's No. 1 cash crop with an estimated 1980 crop value in excess of \$15 billion. Fueled by an aggressive promotion effort funded by soybean growers and

USDA, worldwide demand for soybeans has climbed to 55 percent of U.S. soybean production.

Soybeans and soybean products are now America's greatest agricultural foreign exchange earners with a combined export value in excess of \$9 billion in 1980.

In recent testimony before the Senate Agricultural Committee, American Soybean Association President Frank Ray of Baker, Florida said, "the soybean industry in America has evolved around a free world market. The basic laws of supply and demand in the world marketplace have signaled farmers when to increase or reduce production and we feel those laws should be allowed to continue to work in the future."

In his testimony on the 1981 Farm Bill Ray asked

*That Title I of the 1981 Farm

Bill be designated an international title and devoted entirely to policies for expanding world demand for U.S. agricultural commodities Ray suggested that a provision of Title I be the establishment of a revolving fund for CCC short-term credits to assure U.S. agriculture of sufficient non-subsidized export credit to take advantage of foreign demand for our commodities.

* That federal foreign market development funding be increased by 1985 so that it will equal 0.2 percent of average annual agricultural export value during the preceding two years.

* That Congress restrict the president's authority to enter into bilateral supply and purchase agreements for agricultural commodities with other nations

* That soybeans be recognized

and provided for under a separate title in the farm bill as opposed to the current bill in which soybeans are included in an area designated non-basic agricultural commodities.

Under the soybean title Ray recommended the following provisions:

—That the soybean loan rate be equal to 75 percent of the average Chicago quoted cash price for No. 1 yellow soybeans for each of the last five years excluding the high and low valued years.

—That the secretary of agriculture be prohibited from requiring a set-aside or other

production adjustment program for soybeans or any other crop as a condition for eligibility for the soybean loan program.

—That the secretary of agriculture not be given the authority to offer a target price for soybeans.

—That the secretary of agriculture be specifically prohibited from offering a soybean reserve program or being able to make storage payments on soybeans put under loan.

—That all producers be eligible to place as many soybeans as they desire in the loan program.

Hog producers set feeder pig show

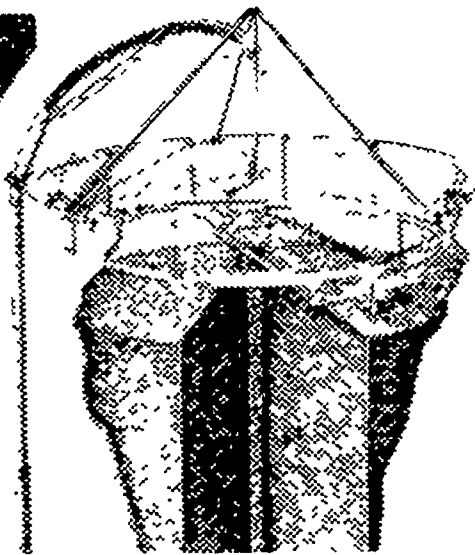

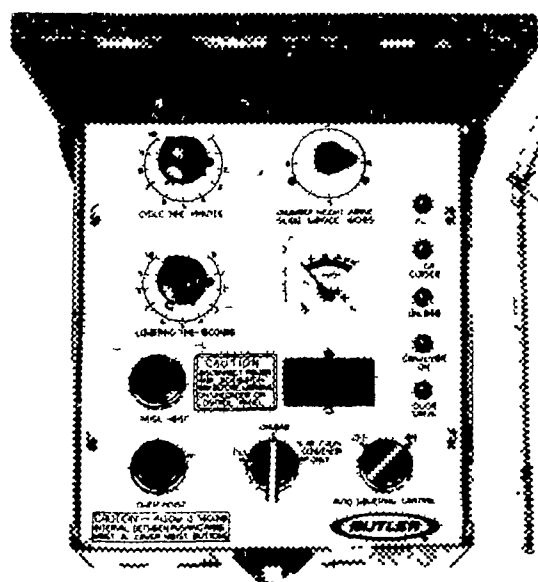

SHIPPENSBURG — The South Central Pennsylvania Pork Producers Association will hold their Annual Feeder Pig Show and Sale on Friday, April 10.

Approximately 100 top quality feeder pigs will be offered. These feeders will be suitable for 4-H and FFA projects.

The show will begin at 3:30 p.m. and the sale at 6:30 p.m. The event will take place at the Shippensburg Fairgrounds, Shippensburg.

For more information contact Ken Ketterer, R2, Newville, 717/423-6250 or Laura Watts, Cumberland County Extension Office, Carlisle, 717/249/7220.

Big Jim[®] super silage handler by JAMESWAY[®]

Why climb?

New Fill-N-Feed[®] Ground Level Change-Over (optional) for the Big Jim silage system lets you switch from fill to feed and back again, simply by setting a control at ground level. Indicator lights show you what's happening in the silo. Feature adds ease and flexibility while the system evenly packs in more silage; feeds out fast.

See us for systems and service that help make the good life better.

Prefab parlor saves energy on Hafer dairy farm

DOUGLASSVILLE — Playing host to the many visitors who stop by his dairy operation is one of Earl Hafer's favorite chores.

"These days, it's real easy to go under in this business," says Hafer. "You've got to have good management. And that means keeping up, having the right equipment."

Hafer manages more than 230 Holsteins on his 75-acre farm, which is located at R2 Douglassville in the southwestern corner of Berks County. He rents an additional 450 acres nearby, on which he raises corn, wheat and alfalfa.

A third-generation dairyman, he purchased the farm from his grandfather several years ago.

Today, the farm's labor force comprises Hafer, his wife and two

sons, and his father, helping part time.

Hafer recently constructed a new milking parlor, a Surge Double Six Herringbone Low Line system manufactured by Babson Bros. of Chicago. The structure

enclosing both the parlor and the adjoining milk house is a prefabricated, insulated metal building supplied by Bally Case & Cooler, Inc. of Bally. The building was installed by Longacre Electrical Service, Inc., also of Berks

County. Longacre is Bally's exclusive representative for milking parlor installations.

Measuring 34'x21', the prefab parlor is annexed directly to Hafer's pole barn where the dairy cattle are housed.

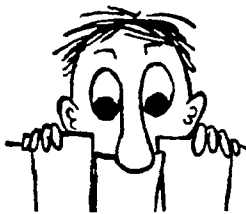

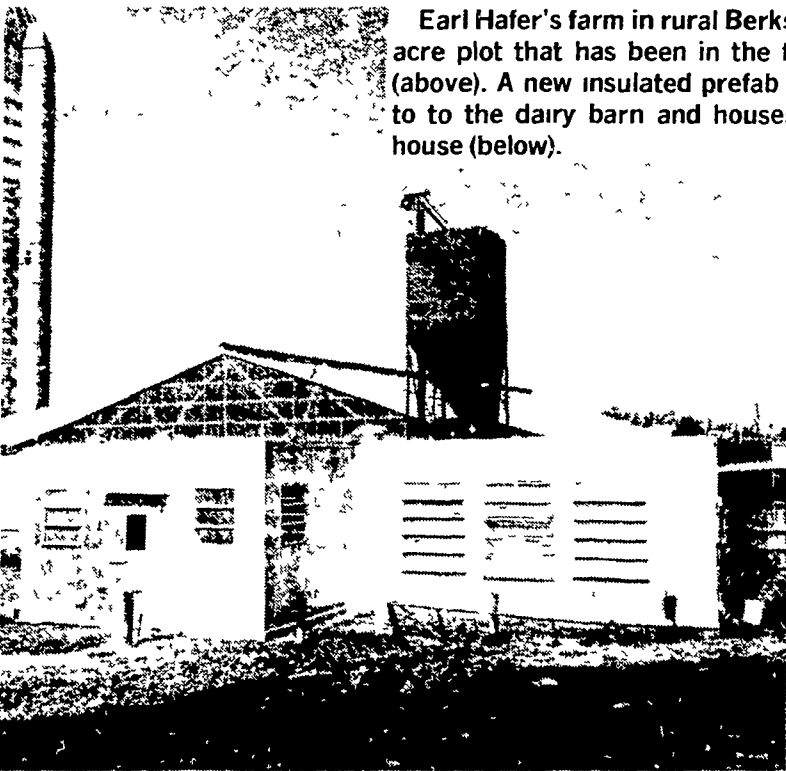

Abutted against the parlor, the

milk house measures 24'x16' and is partitioned in half. The side representing the milk receiving room houses the bulk head of the cooling tank, automatic washing systems, a telephone and assorted system controls.

(Turn to Page D17)

Earl Hafer's farm in rural Berks County, is situated on a 75-acre plot that has been in the family for three generations (above). A new insulated prefab building is attached directly to the dairy barn and houses a milking parlor and milk house (below).

"PLANTING WITHOUT K-MAG IS A LOT LIKE STARTING A TRACTOR WITHOUT A BATTERY."

It's almost impossible to make a tractor work without a battery. Well, you can't expect much better results when a farmer plants crops without adding enough magnesium and sulphur to the soil. It's difficult for them to get started.

K-Mag "not only starts crops right, but helps keep them going at their maximum. All season long. It contains 18% magnesium and 22% sulphur, plus 22% potash. So, when it's mixed with ordinary fertilizers, K-Mag puts back the vital nutrients most of those high-analysis plant foods don't. It becomes a "super food" that

strengthens soil for growing grain, forage, cotton, tobacco, peanuts, soybeans, fruit, vegetables—whatever a farmer may be planting right now.

For that farmer, the addition of K-Mag pays off in a more profitable yield. For the dealer, it's a happier customer. This means repeat sales. Because K-Mag works the first time and every time it's used. Duval has plenty of details on how K-Mag can help put that important spark of growing life back into soil.

Prefab parlor

(Continued from Page D16)

The other side of the structure functions as a utility room. It contains supplies, a water heater, a vacuum pump, dual refrigeration compressors and an energy conversion system.

Hafer selected the Bally prefab building for its insulating abilities. "Not only does it keep us warm, but my plumbing lines don't freeze," notes Hafer.

On Christmas day, 1980, the wind chill index in the Douglassville area fell to -17°F. Hafer reported a 67°F temperature in his parlor with no heat to supplement that

produced by animals and equipment.

"In the heat of summer we sneak into our parlor to cool off," Hafer says with a chuckle.

The Bally panels used to construct Hafer's new parlor and milk house are constructed of four inches of foamed-in-place urethane between 22-gauge steel skins.

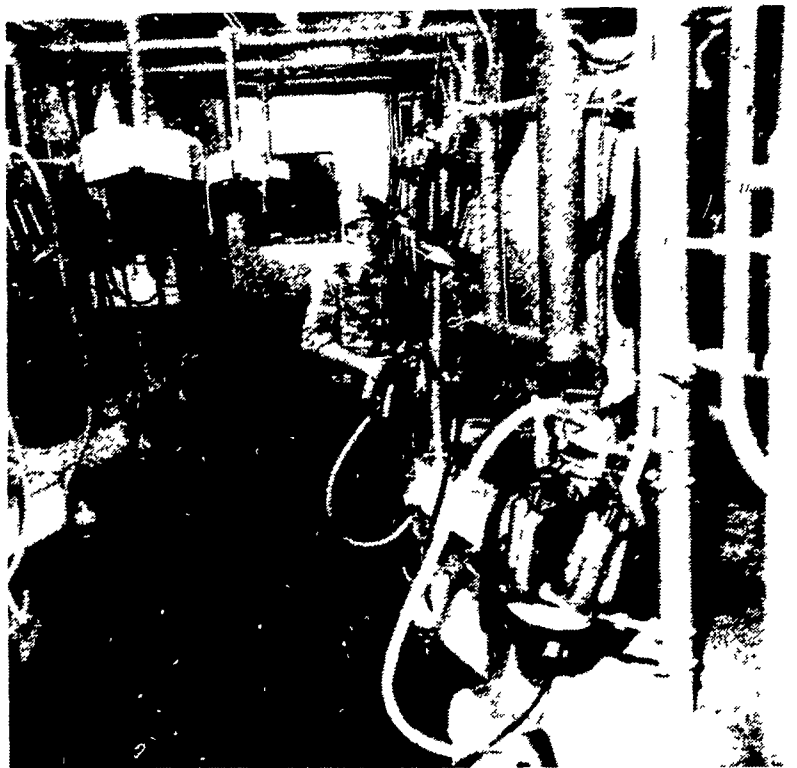

Bally urethane is one of the most energy-conserving insulations available. With an insulating efficiency rating, of "R" value, of 34, it is more than twice as effective as the same thickness of the best

commercially-available fiberglass, the company reports.

Apart from the heat generated by two refrigeration compressors located against the parlor wall in a corner of the utility room, Hafer uses the animals' respiration to keep himself and his family comfortable during milking. Hot air from the compressors is exhausted into the milking parlor through a grate measuring 34"x78".

Hafer says while the initial cost of a prefab building is slightly higher than that of a comparable block and masonry structure, the savings in energy costs alone are soon recouped.

"When you figure that you've got

Hafer is proud of the new 34'x21' parlor, which has a "double six" stall layout. His 230 Holsteins are stripped, washed and milked in the parlor, and fed their grain based on individual production.

to buy and install additional insulation with a cinderblock building, the cost for the Bally building is almost the same," according to Hafer. "So why not buy the best at the start?"

Recently, a parked tractor accidentally rolled into the building, damaging some of the panels, including the doorcap and a corner section, which was badly buckled. Replacing the corner section, the door and a window was accomplished in just 2½ hours.

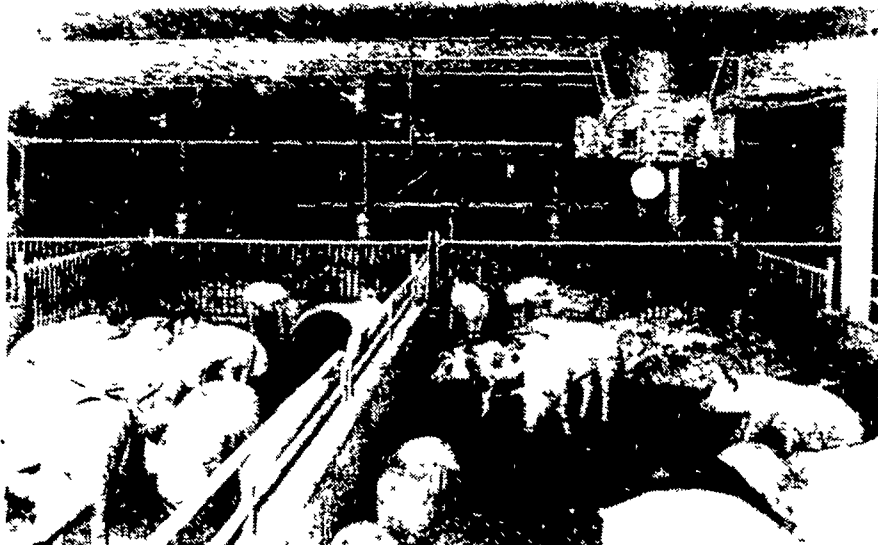

"If we'd had a block building, I'm sure the damage would have been worse," Hafer says. "But the real problem would have been that it takes too long to fix a building like that. The cows have to be taken care of, and there's just no end to the problems we might have had if it had taken weeks to finish the repairs."

Bally panels are joined by steel cam-action locks which are foamed into the cores along edges during fabrication. A simple hex wrench is used to actuate the locks, which are precisely positioned to meet perfectly. When pulled together, tongue-and-groove fittings on the panel edges mesh to form tight seals, enhancing the prefab's insulation capability.

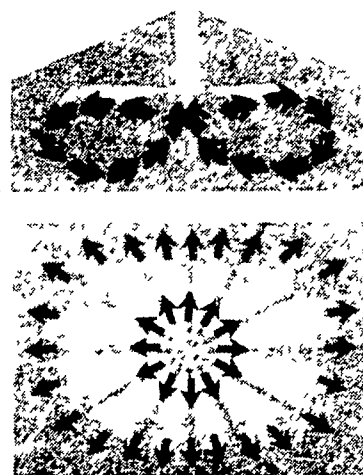

Another device which helps Hafer keep pace with rising fuel and operating costs is an energy converter. The small unit, mounted on the prefab's wall, recycles heat generated by the compressors to convert BTUs of milk heat into BTUs of water heat. The converter keeps the milk house's hot water at temperatures between 120° and 160°F, without using a bit of gas or electricity.

FRISTAMAT VENTILATION

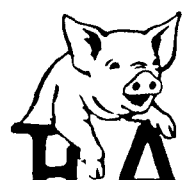

FRISTAMAT VENTILATION IN A FINISHING BARN

THE ENERGY EFFICIENT, FULLY AUTOMATIC SYSTEM FOR LIVESTOCK AND POULTRY. AIR PATTERN and MOVEMENT

This is the key to excellent ventilation. Twelve individual adjustable nozzles control air direction up and down, the length of throw and velocity. The length of throw is crucial in avoiding down drafts at the walls. The velocity ensures proper mixing of air at the ceiling level, uniform temperature and proper air motion at the livestock or poultry level. This air pattern once set never changes.

Wetzel to serve as Berks extension director

LEESPORT — Herbert A. Wetzel, Berks County Extension agent on Penn State's Extension Service staff, has been named county Extension director, effective March 1.

Thomas B. King, Penn State associate dean for extension, points out that Mr. Wetzel is responsible for program coordination of the Berks County

Herbert A. Wetzel

Extension Service. He succeeds James F. Haldeman who retired last August.

A native of Orrtanna, Adams County, he has been a member of the Berks County staff since 1961. He also served in Delaware and Northampton counties from 1957 to 1961 and was an officer in the U.S. Army.

Wetzel received a bachelor of science degree in agronomy from Penn State in 1957 and is completing requirements for a master of agriculture degree in Extension education, also at Penn State.

The new county Extension director coordinates educational programs for fruit growers in southeastern Pennsylvania. He also conducts Christmas tree cultural programs for growers in Berks and Schuylkill counties.

Wetzel assisted in the development of community garden projects for approximately 400 county residents who grow vegetables on land provided by the County Commissioners and City of

Reading Recreation Department.

The Extension agent coaches the Berks County 4-H vegetable judging team. He also worked with the area Extension marketing agent in developing a 4-H tailgate vegetable marketing program.

Wetzel organized and conducted a series of schools for fruit and mushroom growers, along with their sons and daughters.

IN 1975 he was state winner of the O.M. Scott Professional Improvement Program for his educational horticultural programming.

The agent is a member of the Pennsylvania and National Associations of County Agricultural Agents, Epsilon Sigma Phi society, and Penn State Alumni Association.

He is married to the former Patricia Ann Donegan, of Nesquehoning. They are the parents of two sons.

Maryland dairymen hold line on milk

HAGERSTOWN, Md. — Supply-side economics and management are nothing new for progressive Maryland livestock farmers, notes John W. Wysong, Extension farm management specialist and professor of agricultural economics at the University of Maryland.

In recent years, dairymen in the Old Line State have improved their on-farm efficiency through "reallocating processes," Wysong says, and they set a new state record of 12,358 pounds of milk per cow in 1980.

At the same time, they have restrained their total marketable milk production largely in line with changing total consumer demands for Class I fluid milk and dairy product uses in the Mid-Atlantic milk marketing area.

However, at the national level, dairy farmers in 1980 set an all-time record output of 128.1 billion pounds of milk with a record average production of 11,827 pounds per cow. This represented a net expansion of nearly 12 billion pounds of milk from just five years earlier, Wysong points out.

Last year's high U.S. production has resulted in a softening of manufactured milk prices at wholesale and a buildup of federal

government commercial storage holdings, Wysong observes.

As a result, milk prices relative to other animal product prices—such as beef, lamb, pork and broilers—are being reviewed by the Reagan administration for possible changes in the support price levels in line with estimated production costs and historical parity price relationships.

Class I utilization of fluid milk in the Mid-Atlantic milk marketing area (Federal Order 4) has declined from about 65 percent in 1970 to about 51 percent in 1980 as total production in the area has expanded, Dr. Wysong points out.

These total production increases occurred even though Class I poundage for fluid uses declined. Per capita demand for fluid milk also declined during this period to offset population and consumer income gains.

Meanwhile, Class II utilization increased sharply from 1970 to 1980 as production of cheese, butter and dried nonfat milk powder expanded to meet market requirements.

This expansion in Mid-Atlantic area milk output since 1970 has occurred principally in Pennsylvania, Wysong says.

Md. Grange names new royalty

THURMONT, Md. — The Maryland State Grange announced that two Frederick County Youth will be serving as Grange Royalty for 1981.

Princess Andrea Myers of Thurmont Grange and Prince Scott Wiles of Glade Valley Grange in Walkersville will be representing the State Grange at various banquets, conferences and affairs throughout their reign.

Myers and Wiles will be attending the 115th National Grange Session next November in Spokane, Washington and will be competing for national titles.

Scott A. Wiles, 16, is the son of Mr. & Mrs. Maurice Wiles of Walkersville. Scott has been a member of Glade Valley Grange 2½ years and was a charter

member of Glade Valley Junior Grange.

Scott served as Junior Master in 1978 and Maryland State Junior Grange Prince. He was recently elected Assistant Steward of Glade Valley Grange for the third consecutive year.

He is co-youth chairman of his local grange and is also on the cemetery, safety and community show committees. Scott has served as Pomona (county) and state youth officers. Scott has attended several National Grange sessions also.

Wiles, a junior at Walkersville High School, has been very active in the Walkersville Future Farmers of America Chapter. He is currently holding the office of Chaplain.

Wiles is a member of the Walkersville United Methodist Church and is employed on the family dairy farm.

Myers has been a member of the Thurmont Grange for three years and was a charter member of the Junior Grange for six years. She has served the office of Flora and has been serving on the Fair Booth committee and Degree Team for several years. Myers was also the second Maryland Junior Grange Princess in 1978 and has attended National Grange Sessions in Greensboro, North Carolina, and Lancaster, Pennsylvania. She has been a state and national winner in the Grange banner and art contests.

Myers was also a member of the Catocin FFA Chapter for four years and served as chapter reporter for two years.

Andrea is a 1980 graduate of Catocin High School where she served as class secretary in her sophomore and senior years.

Myers was also a member of the grievance panel for three years, photography club for one year and listed among Who's Who Among American High School Students.

Myers is employed as an insurance secretary by R.W. Boyer Agency, Inc., 11 East Church Street in Frederick.

Prince Scott Wiler, Glade Valley Grange in Walkersville and Princess Andrea Myers of Thurmont Grange will be traveling to Washington in November to compete for national titles at the 115th National Grange session.

Tractor safety course set

NORRISTOWN — The Montgomery County Extension Service will offer a tractor safety certification course for area youth. Under the Fair Labor Standards Act, all 14 or 15 year olds who plan to be employed off the home farm and will be involved in operating a tractor of over 20 PTO horse power, must have evidence of satisfactory completion of such a course before they can be employed.

The course will be held on April 7, 22, 28 and May 2 from 6 to 8 p.m. Classes will be held at the Western

Montgomery Vo-Tech School in Limerick. The driving examination is scheduled for Saturday, May 9 from 9 a.m. to noon. Some previous experience is desired.

Although the course is geared to 14 & 15 year olds, anyone interested in learning about basic tractor safety is welcome to attend. To reserve a space in the class, call the 4-H Office of the Cooperative Extension Service, 277-0574. Cost of the annual is \$2.50. Instructor will be Roger Michelone.

NEMA sets parley for April 9

LANCASTER — "Our Board of Directors is extending a cordial invitation to Nema members and their friends to attend the Nema 1981 Egg Producers Conference here on April 9," said William Rent, General Manager of Northeast Egg Marketing Association.

"Our industry has been through some very tough and trying times and every producer will find helpful and valuable information on tap at this session to help him shape business programs in the months ahead," Rent declared.

The entire program is packed into a five hour span, getting underway at 10 a.m. at the Continental Inn, 2285 Lincoln Highway East, in Lancaster.

Leading off will be Attorney George Isaacson, UEP's specialist in labor relations, telling the group why agriculture may be a target of opportunity, in these times for labor unions.

He will be followed by Sig Swanson and Frank Hey of United Egg's insurance staff outlining important insurance services that have been developed by UEP for the egg industry.

Prior to luncheon, the group will hear an update on the activities of Pennsylvania Poultry Federation by John Hoffman, its executive director.

Vicky Wass, Pennsylvania's egg promotion specialist, will outline a seasonal campaign she has put together to spur egg consumption in May-Egg Month.

Forest Muir

Charlie O'Reilly, Mid-Atlantic Manager of Nema, will speak on problems of the industry in meeting weight standards for eggs in some areas of the Northeast.

Highlight of the day's program will be a presentation by a panel of four local industry people covering the topic, "What's Right and What's Wrong on the 1981 Pennsylvania Egg Marketing scene?"

Forest V. Muir, Penn State poultry extension specialist, will serve as moderator of the panel which will include Jim Peters and Jack Hess II, producers; Tom

Trone, producer-packer; and Bill Paterson of Weaver Quality Eggs, speaking for the marketing and processing side of the industry.

Al Pope, President of United Egg Producers, lately returned from a meeting of the International Egg Commission, in London, England will serve as anchor man of the session bringing the group a round-up of information on industry affairs at the world and national level. He is expected to touch at some length on what the egg industry may look for from the new administration in Washington.

Garden State Goat group meets

FLEMINGTON, N.J. — The Garden State Dairy Goat Assoc. held its monthly meeting on March 8. After the regular business meeting, a program was held on milk testing.

Bob Mules from Flemington, who is a supervisor with New York Dairy Herd Improvement Cooperative, Inc., and Gerald Nolton a retired milk testing supervisor were the guest speakers.

Mules discussed the values of milk testing and how to put your herd on test.

Nolton told some history about milk testing and gave a demonstration on testing for the butterfat in milk. A question and answer period was included as part of the

program.

Anyone wishing to have their goats classified this year, should have their money mailed to Marge Green by April 1. For any information concerning classification, call Marge Green at 201/782-8905.

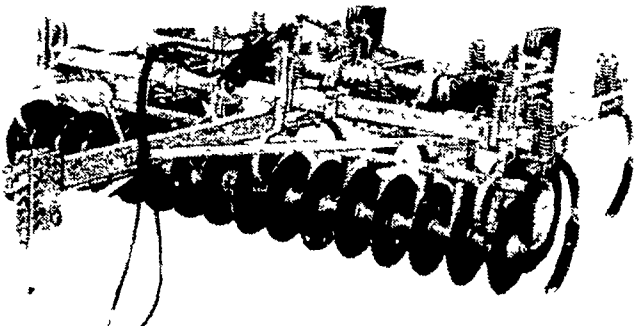

Also members were reminded about the awards banquet on April 11. Contact Janet Grillo at 201/685-0918 by April 1, to make reservations.

The next meeting will be held on April 12, at 1.30 p.m. at the Somerset County 4-H Center on Milltown Road, Bridgewater Township. The program is to be announced.

All persons interested in goats are invited to attend.

Nail down markets before planting vegetables

LANCASTER — market, advises University of Delaware extension vegetable specialist Mike Orzolek. But before you plant your crop, line up your

involved.

To decide where to market your vegetables, ask yourself these questions:

What resources do I have available (capital, labor, land, equipment)?

What level of harvesting and handling effort am I willing to make (mechanical harvest only, hand harvest, cleaning and packing, product delivery, development of a package label)?

How much of the sales responsibility am I willing to assume?

Once you've answered these questions, you can take a look at the available market options. These include: (1) fresh market—direct to retailer; (2) fresh market—direct to consumer; (3) fresh market wholesale; (4) grower co-ops; (5)

processing; as well as (6) other market outlets such as restaurants and institutions that serve meals.

Agreements with retailers to buy your produce for fresh market use should be negotiated well before planting, says Orzolek. Start contacting potential retailers at least six months before the start of the season.

You'll be expected to meet the same strict requirements for product quality and "shelf life" as you would through a wholesale agency. A commitment of large acreage is not necessarily required.

Grower responsibilities in direct retail sales are usually the same as those for marketing through wholesale agencies. They include: a planting

schedule; harvesting, cleaning and grading the product; product delivery; and assurance of the availability of production resources.

A retailer may not require as much packaging as wholesale agencies do. He may require as much as four weeks notice of product availability in order to make sure it's on hand to satisfy customer demand.

In this form of marketing, the grower assumes part of the sales responsibility.

If you're selling direct to consumer no preplanting marketing arrangements are made, except possibly with consumer groups. Large acreages aren't required. But quality requirements are as strict as for other outlets.

You also have the same production, harvesting, handling and delivery responsibilities as for sales to retailers, except for U-pick, where you do no harvesting, handling or delivery. At the same time, you assume all responsibility for sales.

Fresh market wholesale crops are normally grown under the terms of a negotiated agreement or other formal agreement between grower and handler. Agreements should be negotiated well before planting, though it is possible to do so afterwards.

Normally agreements cover only marketing of the product.

There are strict quality requirements to be met including freedom from insect and disease damage,

illegal pesticide residues, and nutrient problems. You don't have to commit a lot of land, but the economics of wholesaling produce may well favor the commitment of larger acreages.

The planting schedule is usually the grower's responsibility when growing for the wholesale market. Harvesting, cleaning, grading and packing are also usually your responsibility, except in some special situations when the marketing agency does some of the grading and packing. But you must be willing to grade out inferior product.

The delivered product must have satisfactory "shelf life" to reach the consumer at peak quality. This means removing field heat as soon as possible after the crop is harvested.

Delivery depends on the terms of the wholesale marketing agreement. You may need to show that you have the necessary production resources, before a contract is awarded. Orzolek advises contacting potential marketing agencies six months or more in advance of planting if you decide to wholesale your crop.

Processing vegetables are normally grown under the terms of a negotiated contract. Terms vary with the commodity and the processor. A commitment of relatively large acreage is required except for a few specialized low-volume crops.

Processors have strict quality requirements including freedom from

disease and insect damage, illegal pesticide residues, and nutrient problems that impair product appearance. Planting is usually scheduled by the processor to ensure dependable flow of produce into the processing facility.

Usually the crop is delivered in bulk to the plant and weight and graded there. Harvesting and delivery may be the responsibility of the grower or the processor, depending on terms of the contract.

You may need to show that you have the necessary resources and skill to grow the product. Normally you should contact processors nine months or more before the start of the growing season.

The grower has no sales responsibility.

Besides these options, there are also grower co-ops which perform all or part of the market responsibilities. In some cases a co-op only grades and packs for a group of farmers. In others it also handles sales as a wholesale agency would. Other requirements are usually the same as for the wholesale fresh market.

Don't overlook some of your other market opportunities either, says Orzolek. Besides restaurants, schools, businesses, hospitals and other institutions serve meals. And with a little imagination you should be able to think of many other possibilities.

Regardless of which outlet you decide to use or how much you decide to grow, how you sell your crop should be your first concern and your marketing plans should be made well ahead of planting time.

PIRRUNG'S ONCE A YEAR AUCTION OF FARMER OWNED EQUIPMENT TUESDAY, APRIL 7 9:30 A.M. COHOCTON, NEW YORK

This sale will feature the complete dispersal of excellent potato farm machinery, bulk trucks and irrigation equipment of Hubbard Farms, Avoca, N.Y.; PLUS the complete line of general equipment from the David Hasler Farm at Springwater where fire recently destroyed the barns; and the machinery from the estate of Alfred Clymo and others!

This is an established marketplace where consignments of good used and new machinery are accepted. Expecting 400-500 pieces of all large items. No small items at all! Watch for further ads and reserve the date.

Taking stock of ag's natural resources

NEWARK, Del. — Recent emphasis on energy, environmental, and land use issues has brought focus on the implications of natural resource use in agricultural production.

These implications are emerging as major factors in food and agricultural policy formation in 1981, says Delaware extension community and resource economics specialist Gerald F. Vaughn.

This includes the problems, issues, and alternative policy approaches in soil erosion, agricultural nonpoint pollution, farmland losses due to conversion, and the implications of liquid fuel shortages on the agricultural and food sector.

The average annual loss of topsoil from America's agricultural land is estimated at 12 tons per acre, although rates of soil loss and soil formation vary according to such factors as climate, vegetation, soil disturbances and the nature of the subsoil.

Those who argue for greater public and private investment in soil conservation point to two concurrent trends: steady increases in world population, and steady increases in price (and impending reductions in supply) of petroleum-based fossil fuels.

Assuming the best U.S. cropland is already in production, increased supplies of food and fiber for the future will depend on growth in productivity per acre. Topsoil is an essential base for the future productivity of agriculture.

Another major argument for soil conservation identifies soil erosion and associated phosphate and pesticide runoff as a major source of water pollution.

About one billion of the four billion tons of water-borne sediments end up in the ocean, and the remaining three billion tons settle in reservoirs, rivers and lakes. About 75 percent of this sediment comes from agricultural lands.

Federal programs to direct and financially support soil conservation programs have met with varying degrees of success in the adoption of soil conservation practices. Recent legislative efforts suggest that many politicians and farm leaders feel that soil conservation deserves renewed federal commitment.

Possible policy instruments to facilitate conservation range from purely voluntary measures to strict regulatory measures, along with a variety of

financial incentive mechanisms. A list of these conservation-encouraging instruments would include education and technical assistance, tax deductions for conservation investments, low-cost loans for conservation investments; cost-sharing, direct payments, induced voluntary cross-compliance, required cross-compliance.

between conservation programs and supply control, price support, (Turn to Page D23)

FOR SALE

Registered Jerseys. 40 bred heifers due April through base months, dams to 16,000 lbs milk actual, some 6% testers

Ag resources

(Continued from Page D22)

target loan, and disaster assistance programs; taxes or charges based on soil losses; regulations mandating conservation practices and prohibiting soil degrading practices; and combinations of two or more of these.

About three million acres of rural land in the United States are converted to highways, urban development, or

other special uses each year. Most of these conversions are considered irreversible and are in conflict with agricultural land uses. One-third of the land converted in this manner is cropland.

In Delaware for instance, land in farms has fallen from 86 percent of the state's total land area in 1880 to 53 percent in 1978, and is

projected to drop to 35 percent by the year 2000 unless action is taken.

From a national perspective, continued conversion of agricultural land to non-farm uses is a potential problem, in that it reduces the natural resource base needed to meet the future world demand for food.

Some experts express concern about future

food production, the leveling off in productivity of agricultural resources, reduction of funds for research on food production, increasing cost and relative scarcity of water and fossil fuels, increasing environmental restrictions on pesticides and other agricultural chemicals, and the need to export agricultural

products to offset imports of other products.

There are also aesthetic and environmental reasons for keeping land in agriculture rather than industrial, commercial or residential use. The market system may allocate too much land to non-farm use if these other aspects of agricultural land value are not considered.

Moreover, specific tracts of agricultural land that may contribute little to the nation's total agricultural output still may support a local economy very much dependent on this agricultural base. Conversion of that agricultural land could have significant local consequences.

The National Agricultural Lands Study announced its findings and recommendations in mid-January. Jointly sponsored by the U.S. Department of Agriculture and Council on Environmental Quality, the study is expected to receive some attention by Congress during farm bill drafting in 1981.

World concern also focuses on supplies and prices of energy, particularly liquid fuels. Although agriculture is a relatively small user of oil and natural gas, the use of these fuels is critical both in quantity and timing. Special efforts must be made to secure adequate supplies during critical use periods for agricultural production.

The productivity implications of short energy supplies for agriculture must be well understood when allocation priorities are established.

Domestic energy production can shift away from oil and natural gas toward coal, with additions from shale oil, tar sands, biomass and low head water power. Wind and solar energy will increase substantially, but the future of nuclear energy is unclear.

Surface disruption of agricultural land, disposal of waste material, water contamination, and increased water demands for energy processing and possibly transportation are the principal impacts on agricultural resources. Development of biomass as an energy source could affect food production and agricultural resource use more directly.

The specific impacts of the energy supply and price problem on agriculture can be identified in three general categories: demand for agricultural commodities; supply or cost of production; and resource use.

The impact of higher energy prices on the general economy will be felt in the form of continued inflation, low real growth rates, increased marginal tax

Ag resources

(Continued from Page D23)

rates, and a shift of relative income toward holders of the scarce resources.

Consumers will thus face a declining real discretionary income and rising food costs. This situation will bring a negative impact on food demand, especially on non-staple food items.

So, some shifts are likely in the food basket mix and the percent of income spent on food.

Costs of energy inputs will continue to increase, but these increases will not be distributed equally among commodities, regions, or production-processing stages. The greatest relative impacts will be apparent on energy intensive systems, including irrigated crop production, nitrogen-dependent crops, crops produced on light soils, and heavily processed or transported commodities.

Land-use patterns will clearly be affected by these supply and demand factors. Some marginal irrigation regions can be expected to return to dryland farming. Competition for water use in coal and shale oil areas may put further pressure on limited irrigation water supplies.

Synthetic fuel production from biomass sources will intensify land use in other areas.

Use of crop residue or whole plant removal for energy production will affect soil depletion rates through increased erosion and nutrient removal, which will in turn affect water quality.

Several policy issues related to energy and agriculture arise in connection with anticipated adjustments in the supply of and demand for agricultural resources. They are: fuel allocation priorities; an alcohol fuel policy; a special policy for on-farm alcohol production; and the use of set-aside acres for alcohol production.

For a more complete discussion of natural resource implications for agricultural, environmental and energy policies, contact Gerald F. Vaughn for Factsheet 8 of the series devoted to food and agricultural policy issues for the 1980's.

A free copy may be obtained by writing to Vaughn at Agricultural Hall, University of Delaware, Newark, DE 19711.

Dauphin County to hold Arbor Day tree sale

HARRISBURG — In Day, the Dauphin observance of Arbor County Conservation

District will conduct its annual seedling sale on April 25

During the past seven years, more than 110,000 trees have been purchased by Dauphin

County residents through the Conservation District's seedling sale

Hardwood species for sale are red oak, white flowering dogwood,

white ash, black walnut, scarlet maple and russian olive. Conifers to be sold are douglas fir, blue spruce, white pine and norway spruce. The average size of

the three and four year old bareroot seedlings is 12 inches for conifers and 20 inches for hardwoods

Trees have many benefits, not the least of

which is energy conservation. During the summer months shade trees act as "nature's air-conditioner" and reduce or eliminate the need for mechanical cooling

In the winter trees planted as a windbreak also reduce energy costs. For instance, a row of evergreens 20 feet high can slow down winds for a distance of 200 feet and lower heating bills by up to 20 percent.

The use of firewood as an alternative fuel is yet another benefit of trees. Red oak produces 26 million BTU's per cord, while white ash yields 23 million BTU's per cord.

Other benefits of trees are erosion control, privacy, property beautification, reduction of noise levels, wildlife habitat and, of course, timber production.

Black walnut is the top money tree due to its beautiful dark wood.

Information and prices can be obtained by contacting the Dauphin County Conservation District at 75 S. Houcks Road, Suite 305, Harrisburg, Pa. 17109 or call our 24 hour "evergreen" line at 717-652-7073. The deadline for placing orders and 2 p.m. at the Colonial Park Plaza and the Lykens Valley Shopping Plaza, Elizabethtown.

Manor 4-H gets together

MILLERSVILLE — The Penn Manor Community 4-H club will hold its organizational meeting on March 31, at the Millersville Community Building on the corner of Duke and Charlotte Streets.

All youth between the ages of 8 and 19 years are eligible to join the club.

If you are interested in joining or learning more about the club come anytime between 7:30 and 8:30 p.m. at which time you will be able to talk with the various leaders, and sign up to join the club.

If you have any questions you may call the organizational leader, Mrs. Dorothy Charles (872-7389).

The following projects will be offered in the club: cooking, sewing, cake decorating, crafts, oil painting, photography, handyman, vegetable gardening, strawberries, outdoor flowers, indoor plants, field corn, tobacco, swine, capons, rabbits, pet care, entomology, beekeeping and teen leadership.

Penn State sets 'Little I'

UNIVERSITY PARK — The Penn State Block and Bridle Club is preparing for the 64th Little International Livestock Exposition.

Showtime is April 25 at 8 a.m. in the Penn State Beef-Sheep Center. The Public is invited to attend the day's activities.

Students draw lots for the animals about six weeks before the show. They are responsible for fitting and training the animal for the show.

"Little I" competition includes the fitting and showing of beef cattle, sheep, swine and horses.

At 8 a.m. the judging of beef cattle and sheep will begin. The hog classes will follow the judging of the sheep. Horses will be shown in the afternoon. The grand champion showman will then be picked after all the species are completed.

In the evening following the competition a banquet will be held to award the trophies for the champion showers and fitters.

Judges for "Little I" are Chester Hughes of Portage for beef; Robert Zimmerman of New Concorde, Ohio for sheep; Keith Bard of Lewistown for swine; and Nancy Kohler of McKean for horses.

Students with knowledge of showing the respective species are selected as superintendents to help the contestants with their animals.

This years superintendents are Dale Rains of Mercer for beef, Linda Ebaugh of Delta for sheep, Lee Johnston of New Alexandria for swine, and Rich Deniston of Pittsburgh for horses.

The show manager is Jeff Byerly of Milton, a senior majoring in animal production.

Assisting Jeff is Bob Bortz of Apollo, a junior animal production major.

The club's advisor is Harold Harpster.

Lycoming County sets princess pageant

LINDEN — The 1981 Lycoming County Dairy Princess will be crowned at a pageant set for 7:30 p.m. Friday, June 26, in the Lycoming Mall off Route 220. It will be the highlight of a weeklong ob-

servation of National Dairy Month at the mall.

Applications for girls wishing to compete in the pageant are available from J. David Jarrett, of R1 Linden, chairman of the county dairy princess committee; Mrs. Richard P. Barto, of Montgomery R1, co-chairman, and the Lycoming County Extension Service office in the Court House.

To be eligible, a girl must have completed her junior year of high school before the pageant takes place and she must not be 22 before Dec. 31. She also must be single, a county resident, and the daughter of a dairy farmer, dairy farm manager, herdsman or dairy farm owner, or she must be the owner of more than one dairy animal prior to May 1.

Contestants will be judged on appearance, speaking ability, poise and personality, intelligence, and knowledge of the dairy industry. Each must present a skit, preferably three to five minutes long, on the dairy industry.

The winner will compete in the state pageant in Harrisburg September 21 and 22.

The reigning Lycoming County Dairy Princess is Sherrie A. Lovell, daughter of Mr. and Mrs. Fred W. Lovell, R1 Linden.

V & V ZUBER MILKING HERD and BRED HEIFER DISPERSAL

THURSDAY, APRIL 2, 1981

At 12:30 P.M.

Chili Center, N.Y. Located ½ Mile
north of Rt. 252, 8 miles west of Rt. 15.
Follow Rt. 252 east from Rt. 33A, 1½
miles east of Chili Center, at 177 Archer
Rd. Having decided to discontinue
dairying will sell:

72 head Holstein dairy cattle, by 40 years of
A-I, Curtiss, and Eastern sires

60 cows average 15,791 3 75 test of milk
shipped to the plant in the past 12 months.

57 cows in milk (17 first or second-calf
heifers), 12 bred heifers, 2 open heifers, one
calf

This is a farmer breeder herd, all bred and
raised on this farm These are big, strong,
good-uddered dairy cows housed in a stanchion
barn and will be examined for pregnancy, and
will have shipping fever inoculations.

The Zuber Brothers are exceptional care-
takers and the herd has the size and condition
to produce.

5 new Zimmerman elevators (28' to 40' long), N H 30 pipe elev., 2 alum
elev., 2 new augers, bench elevators, heavy-duty belt elev. which adjusts
to different heights and runs either direction, 10 J D and Int. loaders

There will also be a truck load and a row of miscellaneous articles in the
field. If you need tractor tires, implement tires and tubes (know your size),
there will be an inventory of \$8000 new tires and lots of used ones. AT-
TENTION This is NOT a commission sale - all one owner's equipment. A
few items may be sold before the sale and others added. There will be
loaders and men available to help load.

Terms - Cash or Good Check; Identification required for Bidder's
Numbers; Lunch at Sale. Motels within a radius of 12 to 15 miles.

SPECIAL NIGHT SALE

MEL KOLB, INC.

Quality Holsteins

THURSDAY, APRIL 2nd, 1981

7:30 PM

SPECIAL TREAT FOR ALL DAIRYMEN!
AT THE FORMER BLACK AND WHITE FARM, LANCASTER, PA.

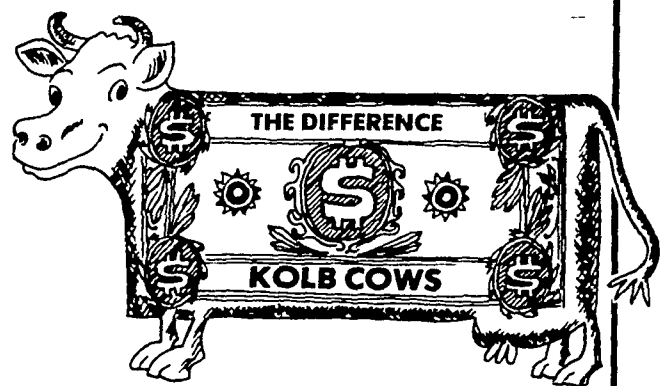

DIRECTIONS: Our farm is located west of Lancaster on Dairy Road. Take Route 283 west of Lancaster, exit just beyond ABC Stud Barns at Florys Mill Rd., turn left after exiting, go to mill, then sharp right under railroad bridge. Barn within sight of Route 283.

150 PUREBRED and GRADES 150

Farmers, we really have a nice selection of cattle for this sale.

- ★ 2 loads of big fancy Wisconsin cows all hand picked by us. Most of these look like they would milk 80 to 90 lbs. per day
- ★ 1 load of nice first calf heifers and cows from Maine.
- ★ 1 load Excellent fancy Northern Pennsylvania cows mostly Purebreds.
- ★ 25 head fancy first calf heifers, fresh, milking like a cow.
- ★ 25 good big Purebred heifers, fresh, sired by good Bulls and Dams.

There will be a lot of top Purebred cows with records and classifications. Also a nice group of open heifers. There will be Purebred calves sold too. Plus, a few good stock bulls. Here's a sample of our Purebreds....

SPECIAL MENTIONS

CHECK YOUR MINERAL PROGRAM AND COMPARE

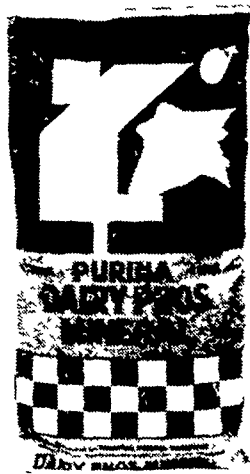

\$12.00
Per
50 Lb.
Bag*

**PURINA[®]
DAIRY
MINERAL**
**16% CALCIUM
16% PHOSPHORUS**

Plus Sodium, Chlorine, Magnesium
Sulphur, Potassium, Iron, Copper, Cobalt,
Iodine, Zinc, Manganese, Selenium

Purina Dairy Mineral is formulated especially for cows on grass pasture, hay or haylage and for cows on a heavy feeding program of corn or sorghum silage. All of these roughages are low in calcium as well as phosphorus. It is very important to feed with them a mineral mixture with a 1:1 calcium-phosphorus ration, to supply both elements. Purina Dairy Mineral has a 1:1 calcium phosphorus ratio, plus all the other essential minerals.

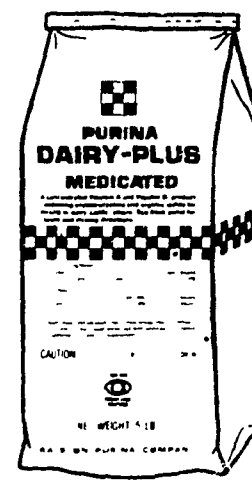

\$13.50
Per
50 Lb.
Bag*

**PURINA[®]
DAIRY PHOS
MINERAL**
**0% CALCIUM
16% PHOSPHORUS**

Plus Sodium, Chlorine, Magnesium
Sulphur, Potassium, Iron, Copper, Cobalt,
Iodine, Zinc, Manganese, Selenium

Purina Dairy Phos Mineral is formulated to provide cows with the phosphorus they need when they are getting a high calcium, low phosphorus forage such as alfalfa, clover or other legume pasture, hay, haylage or citrus pulp. Dairy Phos Mineral contains 0% calcium, 16% phosphorus and all the rest of the essential trace mineral elements. Dairy Phos Mineral is the product of choice whenever the calcium to phosphorus ratio in the total ration is greater than 2.2:1.

\$33.00
Per
50 Lb.
Bag*

**PURINA[®]
DAIRY-PLUS**

**1,000,000 units Vitamin A per lb.
200,000 units Vitamin D3 per lb.
100 units Vitamin E per lb.
1.5 grams Oxytetracycline
per lb.**

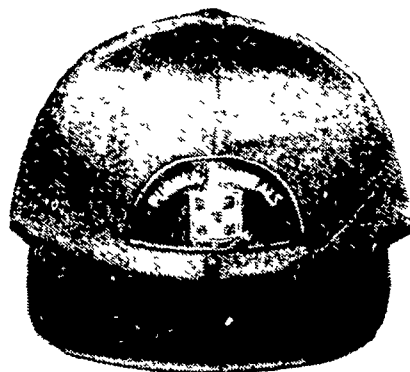

Dairy-Plus supplies additional Vitamins A, D3 and E during low intake periods or periods of stress. It helps to prevent and treat bacterial diarrhea (scours). Helps to increase milk production in lactating dairy cows.

Prices quoted are typical for Lancaster County week of March 28th and are subject to change without notice
